F. *arce*, an arch, fem. form (prob. by confusion with OF. and F. *arce*, ark, < L. *arca*: see *arch*²) of OF. and F. *arc*, < L. *arcus*: see *arc*¹.] 1. In *geom.*, any part of the circumference of a circle or other curve; an arc. See *arc*¹, 1.—2. In *arch.*, a structure built of separate and inelastic blocks, assembled on a curved line in such a way as to retain their position when the structure is supported extraneously only at its two extremities. The separate blocks which compose the arch are called *vousoirs* or *arch-stones*. The extreme or lowest vousoirs are termed *springers*, and the uppermost or central one, when a single stone occupies this position, is called the *keystone*. The under or concave face of the

assembled vousoirs is called the *intrados*, and the upper or convex face the *extrados*, of the arch. When the curves of the intrados and extrados are concentric or parallel, the arch is said to be *extradosed*. The supports which afford resting and resisting points to the arch are *piers* or *pillars*, which receive the vertical pressure of the arch, and *abutments*, which resist its lateral thrust, and which are properly portions of the wall or other structure above the springing and abrest of the shoulder of the arch. The upper part of the pier upon which the arch rests (technically, the point from which it springs) is the *impost*. The *span* of an arch is the distance between its opposite imposts. The *rise* of an arch is the height of the highest point of its intrados above the line of the imposts; this point is sometimes called the *under side of the crown*, the highest point of the extrados being the *crown*. The *thrust* of an arch is the pressure which it exerts outward. This pressure is practically collected, so far as it is manifested as an active force, at a point which cannot be exactly determined theoretically, but is at about one third of the height of the rise of the arch. The thrust must be counteracted by abutments or buttresses. Arches are designated in two ways: First, in a general manner, according to their properties, their uses, their position in a building, or their exclusive employment in a particular style of architecture. Thus,

their uses, their position in a building, or their exclusive employment in a particular style of architecture. Thus,

there are *arches of equilibration*, *equipollent arches*, *arches of discharge*, *skew* and *reversed arches*, *Roman*, *Pointed*, and *Saracenic arches*. Second, they are named specifically, according to the curve the intrados assumes, when that curve is the section of any of the geometrical solids, as *segmental*, *semicircular*, *cycloidal*, *elliptical*, *parabolaical*,

hyperbolic, or *catenarian arches*; or from the resemblance of the whole contour of the curve to some familiar object, as *tangent arch* and *horseshoe arch*; or from the

method used in describing the curve, as *equilateral*, *three-centered*, *four-centered*, *ogee*, etc. When an arch has one of its imposts higher than the other, it is said to be *ram-*

ant. *Foil arches* are arches whose intrados outlines form a series of subordinate arcs called *foils*, the points of which

are termed *cusps*. A numeral is usually employed to designate the number of foils, as a *trefoil arch*, a *cinqusfoil arch*, etc.

3. Any place covered with an arch or a vault like an arch: as, to pass through the *arch* of a bridge.—4. Any curvature in the form of an arch: as, the *arch* of the aorta; the *arch* of an eyebrow, of the foot, of the heavens, etc.

post, or of which the piers are in fact continued above the apparent impost, so that a portion of the intrados on either side is vertical.—**Surmounted arch**, a stilted semicircular arch; a semicircular arch of which the rise is greater than the radius.—**Triumphal arch**, a monumental arch in honor of an individual, or in commemoration of an event. Such arches were first erected under

the Roman emperors, and were originally temporary structures, festooned and otherwise decorated, standing at the entrance of a city, or in a street, that a victorious general and his army might pass under them in triumph. At a later period the triumphal arch became a richly sculptured, massive, and permanent structure, having an archway passing through it, and often a smaller arch on either side. The name is at the present day often given to an arch, generally of wood decorated with flowers, evergreens, banners, etc., erected on the occasion of some public celebration or rejoicing. The great arch in a church which gives access to the choir—the chancel arch—is sometimes so called. In early Christian churches, a representation of the Glory or Triumph of Christ sometimes occupied a wall-space above this arch.

Archæology is sometimes taken specifically in the restricted sense of the science of ancient art, including architecture, sculpture, painting, ceramics, and decoration, together with whatever records may accompany and serve to identify them.—**Classical archæology**, the archæology of ancient Greece and Rome.—**Medieval archæology**, the archæology of the middle ages.—**Syn. It is of Jurassic age, and is notable as the oldest known avian type, and

as combining some characters of a lizard with those of a bird. The original fossil consisted only of the impression of a single feather, upon which the name *Archæopteryx*

Archæopteryx. (From Slab in British Museum.)

lithographica was imposed by Von Meyer. A second specimen from the same formation and locality was named *A. maerula* by Owen. The specific identity of the two can be neither affirmed nor denied, and their generic identity is only presumptive. A third and still more characteristic specimen is identical with the second, and has furnished many additional characters. Members of this genus had teeth, a long, lizard-like tail formed of many vertebrae, and separate metacarpal bones, in combination with a carinate sternum and other features of modern birds. It is thus a unique type of ornithic structure, and represents a distinct subclass of *Aves*. See *Sauriura*.

archæostoma (är-kē-ōs'tō-mā), *n.*; *pl. archæostomata* (är'kē-ō-stō'mā-tā). [NL., < Gr. ἀρχαῖος, ancient, + στόμα, mouth.] In *biol.*, a primitive blastopore; a primitive unmodified enteric orifice, both oral and anal: opposed to *deuterostoma*. Also written *archæostome*.

In *biol.*, having a primitive blastopore or original orifice of invagination of a blastosphere which has undergone gastrulation; retaining an archenteric aperture, as distinguished from any other which may be acquired by a deuterostomatous gastrula: it is the usual state of those gastrulae which are formed by emboly.

In the former [process of gastrulation by emboly] the blastopore would be left as the aperture of communication of the endoderm with the exterior; and the result would be the formation of an *archæostomatous* gastrula. *Huxley, Anat. Invert.*, p. 585.

archæus (är-kē'us), *n.*; *pl. archæi* (-ī). [NL., < Gr. ἀρχαῖος, ancient, primitive, < ἀρχή, beginning, < ἀρχεν, be first: see *archæo-*.] In the philosophy of Paracelsus and other spagyrics, mystics, and theosophists, a spirit, or invisible man or animal of ethereal substance, the counterpart of the visible body, within which it resides and to which it imparts life, strength, and the power of assimilating food. The word is said to have been used by Basil Valentine, a German chemist of the fifteenth century, to denote the solar heat as the source of the life of plants. Paracelsus uses it with the above meaning. It is frequent in the writings of Van Helmont, who explains it as a material preexistence of the human or animal form *in posse*. He regards the archæus as a fluid, that is, as a semi-material substance, like air, and seems to consider it a chemical constituent of the blood. Paracelsus had particularly made use of the hypothesis of the archæus to explain the assimilation of food. This function of the archæus became prominent in medicine. Van Helmont calls it the door-keeper of the stomach (*janitor stomachi*). There are further divarications of meaning. Also spelled *archeus*.

As for the many pretended intricacies in the instance of the formation of Wasps out of the Carcase of a Horse, I say, the *Archæi* that formed them are no parts of the

Horse's Soul that is dead, but several distinct *Archæi* that do as naturally join with the Matter of his body, so putrified and prepared, as the Crows come to eat his flesh.

tique: see *archæo-*.] Marked by the characteristics of an earlier period; characterized by archaism; primitive; old-fashioned; antiquated: as, an *archaic* word or phrase.

A person familiar with the dialect of certain portions of Massachusetts will not fail to recognize, in ordinary discourse, many words now noted in English vocabularies as *archaic*, the greater part of which were in common use about the time of the King James translation of the Bible. Shakspeare stands less in need of a glossary to most New Englanders than to many a native of the Old Country. *Lowell, Biglow Papers*, Int.

There is in the best archaic coin work [of the Greeks] . . . a strength and a delicacy which are often wanting in the fully developed art of a later age. *Head, Historia Numorum*, [Int., ix.]

The archate, in art, not simply the quality of radeness or of being primitive, but a radeness and imperfection implying the promise of future advance. Work that is merely barbarous is not properly archaic. The archaic style, in an art of sufficient force to have any development, succeeds the first rude attempts of a people to arrive at graphic representation, and exhibits a manifest sincerity and striving to attain truth, until finally the archaic quality disappears little by little as truth is reached in the great art-schools, such as those of Greece and of the Renaissance painters, or as art sinks into lifeless conventionalism before reaching truth, as in the sculpture of Egypt and Mesopotamia.

archaical (är-kā'i-kal), *a.* [< *archaic* + -al.] Relative to an early period or to a fashion long out of date; primitive; antiquated: archaic.

archaically (är-kā'i-kal-i), *adv.* In an archaic manner.

Same as *archæo-*. **archaism** (är'kā-izm), *n.* [= F. *archaïsme*, < Gr. ἀρχαῖσμός, an antiquated phrase or style, < ἀρχαῖος, copy the ancients, < ἀρχαῖος, old, ancient; see *archæo-*.] 1. The adoption or imitation of that which is antiquated or out of use; especially, the use of archaic words or forms of speech.—2. The quality of being archaic; antiquity of style, manner, or use, as in art or literature; especially, in art, the appearance of traces of the imperfect conception or unskillful handling of tools and material belonging to an art before the time of its highest development. See *the archaic*, under *archæi*.

A select vocabulary corresponding (in point of *nreachism* and remoteness from ordinary use) to our Scriptural vocabulary. *De Quincey*.

3. That which is archaic; especially, an antiquated or obsolete word, expression, pronunciation, or idiom.

A permissible archaism is a word or phrase that has been supplanted by something less apt, but has not become unintelligible. *Lowell, Among my Books*, 2d ser., p. 195.

Doubtless the too free use of archaisms is an abuse. *G. P. Marsh, Lectures on Eng. Lang.*, p. 176.

archangel (ärk'an'jel), *n.* [*< ME. archangel, archungel, etc. (in AS. heah-angel, lit. high angel), < OF. archangel, archangele, mod. An angel of the highest order; a chief angel. The word occurs in two passages of the Bible, 1 Thes. iv, 16, and Jude 9. Michael, mentioned in the latter as an archangel, also in Daniel as the spiritual prince of the Jews, and in Rev. xii, 7 as the leader of the heavenly hosts against the dragon and his angels, is the St. Michael of the church calendar. Coming after him in dignity, three others are especially known by name as archangels: Gabriel, the heavenly interpreter and annunciator or herald (Dan. viii, 16, ix, 21; Luke i, 19); Raphael, the guard angel commemorated in the book of Tobit; and Uriel (2 Esd. iv, 1), the fire or light of God, often mentioned, like the others, in Milton's "Paradise Lost." Three other names are added by tradition to make the number seven (Tobit xii, 15, Rev. viii, 2, where the angels mentioned are taken as archangels), Chamuel, Jophiel or Zophiel, and Zadkiel; and still others are spoken of.

For *archangels* were the first and most glorious of the whole creation: they were the morning work of God, and had the first impressions of his image.

Dryden, Ded. of Plutarch's Lives.

2. A member of the lowest but one of the nine orders of angels composing the "celestial hierarchy" of Dionysius the pseudo-Areopagite, whose classification was adopted by Pope Gregory the Great, and is generally accepted by the theologians of the Roman Catholic Church. 3. [*ML. archangelus, archungelia.*] In bot.: (a) The name of several labiate plants, as *Stachys sylvatica* and species of *Lanium*. (b) An umbelliferous plant, *Archangelica officinalis*. See *angelica*.—4. A slim-bodied, thin-faced variety of domestic pigeon, of rather small size, with long head and beak, a peaked crest, and rich metallic lustrous plumage, black on the shoulders and tail, but coppery elsewhere. The origin of the breed is unknown; it was introduced into England from Ghent. The name is supposed to allude to the brilliancy of the plumage. The bird breeds very true, the chief points being the peaked crest and the luster.

archangelic (ärk-an-jel'ik), *a.* [*< ML. archangelicus, < LGr. ἀρχαγγελικός, < Gr. ἀρχαγγελος, archangel.*] Of or pertaining to archangels: as, "archangelic pomps," *Mrs. Browning*.

It forms the compression-member of the trusswork which transmits the weight of the body of the car from the truck-bolster to the car-axles.

archbishop (ärch'bish'up), *n.* [*< ME. archbishop, archebisop, etc., < AS. arce-, arce-, ercebisop (also heah-bisop, lit. high bishop) = OFries. arcabisop = D. aartsbisshop = OHG. arzibischof, G. erzbischof = Icel. erkbiskup = Dan. It was also occasionally applied in the East to exarchs and metropolitans of sees of exceptional antiquity or dignity, and was sometimes extended in later times to others of the same rank as a special distinction. In the West, from the eighth or ninth century, the title was given to metropolitans of every class, and this is still the use of the Roman Catholic Church. Archbishops have certain rights of honor and jurisdiction over their suffragan bishops (that is, the bishops of the dioceses making up their ecclesiastical province), such as those of calling and presiding over provincial councils, receiving appeals in certain cases, etc.; but these rights, formerly very considerable, are now comparatively limited. At present the archbishop is not always a metropolitan, since there have long been a few archbishoprics without suffragans, and oftener still the title is purely honorary. See *primate*. The insignia of an archbishop in the Roman Catholic Church are the woolen pallium, before receiving which from the pope he cannot exercise the functions of his office, and the double cross borne processionaly before him. In the Anglican Church there are four archbishops, two in the Church of England (those of Canterbury and York, the former of whom is metropolitan of all England), and two in the Church of Ireland (those of Armagh and Dublin, the former of whom is primate). The Church of Sweden has one archbishop, whose see is at Upsala. Abbreviated to *abp.*

The word is found as the title of an ecclesiastical dignitary from the fourth century. In the East it is last found as applied to an ecclesiastical officer of the court of Constantinople under the late Byzantine empire. In the West, from the eighth century, dioceses began to be divided into separate territories, over which rural archdeacons were placed, having under them deans or rural archpriests, charged with the supervision of the parish priests of their respective districts; over these was the general or grand archdeacon of the whole diocese, who took precedence of the archpriest (which see), and held his own court with its officials, distinct from that of the bishop, so that appeals were taken from the former to the latter. The rural archdeacons were often priests, having a cure of souls, as was also the grand archdeacon from the twelfth century. The powers and privileges of this office were gradually restricted, and in the Roman Catholic Church, since the Council of Trent, its place is for the most part supplied by the bishop's vicar-general, between whom and the parish priests are sometimes found the vicars forane, or present rural deans; while the archdeacon of the present day, where the office survives, holds a dignity of honor. In the Church of England each bishop has the assistance of two or more archdeacons, who as his deputies inspect and manage the affairs of the diocese, and perform a variety of duties partly secular and partly ecclesiastical. In two dioceses of the Protestant Episcopal Church of America the title *archdeacon* has been introduced.—*Archdeacon's court.* See *court*.

It includes man alone, and is contemporaneous with the order *Bimana* of some, or the family *Hominidae* or *Anthropoidæ* of others. All the cerebral characters adduced are shared by the anthropoid apes, and the term is not in use, except as a synonym of a group of the zoological value of a modern family. *Fleming*.

arcier, < Ml. *arcarius*, also *arcuarius*, a bowman, < L. *arcus*, a bow: see *arch¹* and *arc¹*.] 1. One who uses a bow; a bowman; specifically, in medieval Europe, one who shot with the longbow (which see) and shaft, as distinguished from an arbalester or crossbowman. In Greek art the archer is generally represented in Oriental dress and armor, and the use of the bow by a native Greek in war is rarely mentioned; but one of the two bowmen of the *Ægina* temple is dressed and armed as a Greek, and on a Basiliscatan vase at Naples (Heydemann, No. 922), of good Greek work, a painting represents three youths, evidently Greeks, shooting with bows and arrows at a cock on a column. Among the Romans archers are rarely mentioned. Throughout the middle ages the archers formed an important part of the armies of Europe; but, as they were drawn wholly from the peasants and townspeople, the nobility and their retainers were often suspicious of them, and the free use of the bow among the common people was often discouraged. In some countries, too, the arbalest was so much preferred that the longbow came little into use. In England large bodies of archers were furnished by towns and counties to the royal armies, and were armed with some degree of uniformity with the steel cap, the gambeson or hauberk, and a short double-edged sword, besides bow and quiver. There is no record of mounted archers in the English armies, but they were common on the continent; the dukes of Burgundy maintained large bodies of them, and King Charles VII. of France had a body-guard of mounted men armed with brigantine or gambeson, and carrying a longbow. From this last organization the name *archers* came to be applied to the body-guard of one of the later kings of France, whose weapon was the harquebuse, which replaced the bow and shafts, and (until the Revolution) to the watchmen or guards of the French cities.

A rich violet, mauve, or purple coloring matter obtained from certain lichens, especially the *Rocella tinctoria* and *R. fuciformis*.—2. The lichen from which the dye is obtained. See *Rocella*.

It is bruised between stones, moistened with putrid urine, and mixed with quicklime or other alkaline liquor. It first becomes purplish-red in color, and then turns to violet. In the first state it is called archil, and in the second litmus. Dyers rarely use archil by itself, on account of its dearth and the perishableness of its beauty. They employ it to give a bloom to other colors, as pinks, blues, and blacks; but this bloom soon decays. Archil is used for tinting the fluid employed in spirit-thermometers, while litmus is employed by chemists as a test for acidity or alkalinity.

Also written *orchella*, and formerly *archall*, *archal*, *orchel*, *orchella*.

Archilochian (är-ki-lō'ki-an), *a.* [< *L. Archilochius*, < *Gr. Ἀρχιλόχους*, pertaining to *Ἀρχιλόχος*, *L. Archilochus*, a poet and satirist of Paros, who lived about 700 B. C.] 1. Greek Archimandrite.

In Russia the bishops are selected from among the archimandrites. The title has been retained among those who separated from the Eastern Church and submitted to the pope while still observing the Greek rite (the so-called United Greeks), and their monasteries are now subject to one proto-archimandrite. A congregation of Basilian monks existing in Sicily before the eleventh century has been under the care of an archimandrite apparently from that time. Its head abbey is that of San Salvatore in Messina, and it forms an exempt archimandrite immediately dependent on the pope. In the early church, and sometimes during the middle ages in the Western Church, the word was used vaguely as equivalent to *pebete*.

C., or to his mechanical inventions.—**Archimedean drill**. See *drill*.—**Archimedean principle**, or **principle of Archimedes**. (a) The principle of the equilibrium of the lever; namely, that a lever loaded with two weights, on opposite sides of the fulcrum, is in equilibrium when the weights are inversely proportional to the length of the arms at whose ends they hang, and that the pressure on the fulcrum of the lever is then exactly equal to the sum of the two weights. (b) The hydrostatic principle, also discovered by Archimedes, that a body immersed in a fluid loses an amount of weight equal to that of the fluid it displaces.—**Archimedean propeller**, a propeller consisting of a continuous spiral vane on a hollow core running lengthwise of the vessel. It is an amplification and extension of the screw.—**Archimedean railway**, a form of railway in which a continuous shaft rotates on pillars between the lines of rails, and propels the car by means of a screw which engages in a pedestal attached to the car.—**Archimedean screw**, a device for raising water, said to

have been invented by Archimedes. It is made by forming a spiral tube within, or by winding a flexible tube spirally about a cylinder. When the cylinder is placed in an inclined position, and the lower end is immersed in water, its revolution will cause the water to move upward through the spiral chambers. Whatever quantity of water first enters the screw immediately descends by its own weight to the lowest point of the spiral; but this point being always shifted higher up by the revolution of the screw, the water may thus be raised to a considerable height. Also called *water-screw* and *spiral pump*.—**Archimedean solid**, one of the thirteen solids described by Archimedes, which, without being regular, have all their solid angles alike, all their faces regular, and not less than four faces of any one kind: sometimes incorrectly called *semi-regular solids*. It was supposed by Gegenbaur to be most nearly approximated in nature by the pectoral member or fin of the ceratodontids, but this view has not been generally accepted; by others the pectoral member of a primitive selachian is believed to approximate realize the idea.

I have given the name of *Archipterygium* to the ground-form of the skeleton, which extends from the limb-bearing girdle into the free appendage. *Gegenbaur*, *Comp. Anat.* (tr. p. 473).

Pertaining to architecture; hence, pertaining or relating to construction or design of any kind.

The Archaeologist cannot fail to remark how severe, in a true age of art, is the observance of this great *Architectonic* law—how its influence pervades all design—how the pictures on Greek vases, or the richly embossed and chased work of the mediæval goldsmiths, are all adjusted to the form and surface allotted to them by an external necessity. C. T. Newton, *Art and Archaeol.*, p. 34.

By *architectonic* I understand the art of constructing systems. Kant, *Critique of Pure Reason* (tr. by Max Muller).

Of these two sciences, . . . that which treats of those conditions of knowledge which lie in the nature, not of thought itself, but of that which we think about, . . . has been called . . . *architectonic*, in so far as it treats of the method of building up our observations into system. Sir W. Hamilton, *Logic*, App. No. 1. (1866), II. 230.

architecture (är'ki-tek-tür), *n.* [= F. *architecture* = It. *architettura*, *<* L. *architectura*, *<* *architectus*, architect: see *architect*.] The Gr. word is *ἀρχιτεκτονία*, *<* *ἀρχιτέκτων*; also *ἀρχιτεκτονική*; see *architectonic*.] 1. The art of building, specifically of fine or beautiful building. Architecture includes, in the widest sense, (1) the principles of design and of ornament as applied to building; (2) the science of construction, including the properties of materials and the methods of combining them; and (3) the practice of construction, including estimates of cost and the directing of builders and workmen. The practice of this art requires skill in design, which is the special province of the architect, and skill in execution, which is the special province of the workmen whom the architect employs and directs. It is the function of skill in architectural design to combine in a harmonious scheme the independent and often hostile requirements (1) of use

Cartilagenous skeleton of a limb (archipterygium) of *Ceratodus forsteri*, the large upper piece articulating with the limb-root.

and convenience as dictated by the conditions of the problem in hand; (2) of constructive necessity and fitness as determined either by practical experience or by scientific theory; and (3) of artistic excellence both in the proportions of the parts and in the decorative treatment of details, in accordance with either the general principles and canons of good taste or the prescriptions of custom or tradition. It is the function of skill in execution practically to carry out the scheme so designed; and this skill is exercised by draftsmen, surveyors, mechanics, artisans, and artists, each in his place. Architecture is properly distinguished from mere building by the presence of the decorative or artistic element. The most important styles in the history of architecture are the Egyptian, Assyrian, Hellenic, Roman, Byzantine, Medieval (including Romanesque and Pointed), Renaissance, and Arabic. (See these and other adjectives characterizing architectural styles.) The various later medieval styles are commonly included under the vague and misleading term Gothic (which see).

Architecture, the art of building, includes two elements, theory and practice. The former comprehends the finer side proper, the body of general rules inspired by taste and based on tradition, and the science, which admits of demonstration by means of invariable and absolute formulas. Practice is the application of theory to particular needs; it is practice which causes the art and the science to conform to the nature of materials, to climate, to the customs of a period, or to the necessities of the occasion.

Viollet-le-Duc, *Dict. de l'Architecture* (trans.), I. 116. We must consider *Architecture* as the great law which has in all time regulated the growth and affected the form of painting and sculpture, till they attain to a certain period in their development, and free themselves from its influence. *C. T. Newton*, *Art and Archaeol.*, p. 29.

Architecture and eloquence are mixed arts, whose end is sometimes beauty and sometimes use. *Emerson*.

2. The buildings or other objects produced by architecture as defined above.—3. The character or style of building: as, the *architecture* of Paris.—4. Construction and formative design of any kind.

One of the giant squids, belonging, doubtless, to the genus *Architeuthis*. After the abolition of the title of king in Attica there was chosen a single archon, who exercised for life essentially royal prerogatives. The term of office was afterward reduced to ten years, and in 683 B. C. it was made annual, and the duties of the archonship were distributed among nine persons. The first was the *archon eponymos* (name-giving archon), whose functions were executive and judicial, and whose name was given in official acts, etc., to the year of his service; the second was the *archon basileus* (archon king), whose duties were chiefly religious and ceremonial; the third was the *archon polemarchos* (archon generalissimo), who was, first in fact and then nominally, commander of the military power; and the remaining six were the *thesmothetes*, or administrators of justice, whose most important duty it was to pass carefully in review, each year, the whole body of laws of the state, in order to make sure that no errors or contradictions had crept in, that repealed laws had been duly canceled, and that repetition was avoided. It rested with the *thesmothetes*, also, to see that all the laws of the republic that were in vigor were strictly enforced, and to bring to trial any public official who had failed in his trust. At the end of their year of office, all the archons, unless they were found guilty of malfeasance, by virtue of their office entered the council of the Areopagus. 2. As a title it dates from the fourth century, and was originally given to the senior by ordination in a diocese, a rule now strictly observed in the West. For relations with other officials, see *archdeacon*. At present, in the Roman Catholic Church, *archpriest* is, for the most part, a title of honor only, the former duties of the office being performed by the auxiliary bishop or the dean of the cathedral chapter. The duties of the rural archpriests, since the Council of Trent, have commonly devolved on the vicars forane, still sometimes called rural deans, or directly on the bishop's vicar-general. They are divisible into three subfamilies: *Ardeine*, the true herons; *Botaurina*, the bitterns; and *Ciconiina*, the boatbills. The last-named, however, is often considered a family apart. See cuts under *Ardea*, *bittern*, and *boatbill*.

Though modified several times in its constitution, notably by Solon and Ephialtes, the Areopagus always retained the highest reputation for dignity, justice, and wisdom. Its functions were at once religious, political, and judicial; the scope of its action was thus much wider than that of a supreme court of the present day, extending not only to jurisdiction in cases of homicide and some others in which religion was concerned, and to a general censorship of all affairs of state, but even to the supervision of education, and to cer-

They are still used, especially in France, as the common names of these six notes. Since the intervals between these notes are the same as those between the first six tones of the modern major scale, the syllables have also been used extensively as names for those tones and as guides in studying their relations. Argon is believed to be monatomic, but its place in the chemical classification is as yet uncertain. It has a boiling-point of -187° C., and has been solidified at a temperature of 196° C. = **Syn.** *Argue, Dispute, Debate, Discuss, plead, expostulate, remonstrate.* To *argue* is to defend one's opinion, or to exhibit reasons or proofs in favor of some assertion or principle; it implies a process of detailed proof by one or more persons. To *dispute* may be to call in question the statements or arguments of an opposing party; as, to

dispute about an award. It often means the alternate giving of reasons, especially by two persons. It is often applied to mere bickering, and is in general less dignified than the other words. To *debate* is to interchange arguments in a somewhat formal manner, as in debating societies and legislative bodies. To *discuss* is, by derivation, to shake or knock a subject to pieces in order to find the truth, or the best thing to be done. A *debate*, therefore, may be viewed as a *discussion*, or a *discussion* as a *debate*. Strictly, a *discussion* is an amicable presentation of opinions, not limited, like the others, to affirmative and negative sides of a proposition, and with the expectation on the part of all that the conclusion will be the adoption of no one person's opinion or plan unmodified. To *argue* a point, to *dispute* a position, to *dispute* with a neighbor, to *debate* a motion, to *discuss* a subject or a plan.

Pope, Essay on Man, ii. 75.

The only *argument* available with an east wind is to put on your overcoat.

Lowell, Democracy.

[This, the familiar meaning of the word, probably originated in Roman law-courts. The usual definition given by Cicero and almost all authorities is *ratio retidubie faciens fidem*, a reason causing belief of a doubtful matter. *Boetius* in one place defines it as a medium proving a conclusion. The word *medium* here means a premise, or premises, according to all the commentators. (*Petrus Hispanus*, tr. v. ad init.) But since *medium* usually means the middle term of a syllogism, some logicians have been led to give *argument* this signification.]

2. The middle term of a syllogism. [See preceding note.]

Argument is the bare proof or mean term which is invented by him that disputeth, to prove the truth of the question; but *argumentation* is the whole reasoning itself, of what form soever it be, comprehending both the question and also the proof thereof. *Blundeville, 1619.*

Argument again, *argumentum*,—what is assumed in order to argue something,—is properly the middle notion in a reasoning—that through which the conclusion is established. *Sir W. Hamilton.*

3. A reasoning; the process by which the connection between that which is or is supposed to be admitted and that which is doubted or supposed to need confirmation is traced or tested.

In matters of wrong *arguments* do confound sense, when in explanation of right they do sensibly approve it.

The probability which she easily perceives in things thus in their native state would be quite lost if this *argument* were managed learnedly and proposed in mood and figure.

8. In *math.*: (a) Of an imaginary quantity, the coefficient of the imaginary unit in its logarithm. (b) The angle or quantity on which a series of numbers in a numerical table depends and with which the table is entered. If, for example, a table of the sun's declination were formed corresponding to every degree, etc., of longitude, so that, the longitude being known, the declination might be found opposite to it, then the longitude would be called the *argument* of the table. Tables of double entry have two arguments. In the Ptolemaic astronomy, the *argument*, without qualification, is the angular distance on the epicycle of a planet from the true apogee of the epicycle; and the *equation of the argument* is the angular distance, as seen from the earth, of a planet from the center of the epicycle, the correction to the second inequality. See *equation*.

See *hypothetic*.—**Inductive argument**, an argument founded on an induction.—**Negative argument**, an argument which concludes the non-existence of a phenomenon from its not having been observed. (For other phrases, see *argumentum, place, proof*.) = **Syn.** 3. *Plea, Argument*. "Plea should be used of the pleadings or of the arraignment before the trial, not of the *argument* at the trial. A. Goldiana, of Calabar, has the largest that are yet known, the blade of which is nearly 2 feet in breadth. In A. Clematis insects bringing pollen to the early matured stigma are imprisoned by impeding hairs which wither after the fresh pollen is shed. Various species have had a popular reputation as remedies for snake-bites, as antelmintics, etc., and the Virginia snake-root, or serpentina-root, A. Serpentina, is employed as a stimulating tonic and diaphoretic. The pipe-vine, or Dutchman's pipe, A. See peripatetic.—**Aristotelian logic.** (a) The logic of Aristotle, especially in the modified form taught in the middle ages. (b) Formal logic, based on the four propositional forms: All S is P; No S is P; Some S is P; Some S is not P.—**Aristotelian sorites**, a progressive chain of reasoning like the following: He who is prudent is temperate; he who is temperate is constant; he who is constant is unperturbed; he who is unperturbed is without sorrow; he who is without sorrow is happy; therefore, the prudent man is happy.

The progressive sorites has been called the common or Aristotelian. This latter denomination is an error, for Aristotle, though certainly not ignorant of the process of reasoning now called sorites, does not enter upon its consideration. Sir W. Hamilton.

II. n. A follower of Aristotle. See peripatetic. **Aristotelianism** (ar'is-tō-tē-li-an-izm), n. [C Aristotelian + -ism.] The philosophy of Aristotle, or any later modification of it. Aristotelianism is a kind of metaphysical evolutionism. Its central idea is the distinction of act and power (actuality and potentiality). The nature of the world as a whole, as well as every part of it, may be illustrated by the analogy of the growth of a tree from a seed. The tree has a sort of being in the seed—a potential being: it exists in it in power only. That which is actualized in the perfected development from the seed—the tree—exists in it in act or actuality. This perfected development—the entelechy—is the characteristic nature of the thing which places it in some natural species, and which is its form, or that element of the thing which makes it to be the kind of thing that it is. The other element, which merely makes the thing to be, is its matter, which, as unformed, is identified by Aristotle with the power or potentiality of a germ. Every event is an act of development. Most events take place under the influence of an external efficient cause, and their character is determined by an end. Matter, form, efficient cause, and end are the four Aristotelian causes or principles. But not all events are brought about by external efficient causes. Some happen by fortuitous spontaneity, and are not determined by any causes whatever. Other events come to pass naturally, that is, by a self-determined growth. Besides that which is moved but does not cause motion, and that which is both moved and causes motion, there must needs be a tertium quid, which is not moved, yet causes motion; and this is God, or pure act (actuality) without undeveloped potentiality. The soul is the entelechy, or perfect flower, of the body. It has three parts, the vegetative (or merely vital), the sensible, and the rational. The reason is not a mere belonging of the individual; it exists before the body, and, as the active reason, is common to all persons upon the tablets of whose passive reason it writes its dicta. Space and time are mere logical elements of motion. Aristotle is justly called the father of logic, although there were some vague

logical doctrines before him, and although his system is now largely superseded. He holds the only excellent reasoning to be syllogism, and all other kinds of reasoning to be imperfect approximations to syllogism. Particular facts are first and best known to us, but general truths are first and best known in themselves. Science must set out with certain fixed first principles, which are definitions. Knowledge is a development from impressions of sense, to the formation of which reason and experience both contribute. Things are of ten classes, substances, relations, quantities, qualities, etc. See category. Different genera are subdivided upon different principles, so that there are no cross-divisions in the real classification of natures. It is possible to so collate passages from Aristotle as to make him appear as an inductive logician; but the whole cast of his mind was such as to lead him to underrate the importance of induction. He lays much stress on the principle of excluded middle, which he treats as a corollary of the principle of contradiction; and he has a general leaning to hard and rather wooden distinctions. The most important of his ethical doctrines are that happiness lies in the working out of one's inwardness, and that every virtue is a golden mean between two vices.

The theory of numbers; the study of the divisibility of whole numbers, the remainders after division, etc. Also called theoretical or higher arithmetical.—2. The art of computation: the most elementary branch of mathematics. This use of the word appears early in the sixteenth century. The art of using Arabic numerals was first called in English algorism (which see) or auynin, then practical arithmetick, lastly arithmetick simply, or elementary arithmetick. Abstract arithmetick teaches systems of notation for numbers, the three rules of direct computation, addition, subtraction, and multiplication, and various rules of indirect computation, or computation by successive approximation, such as division, extraction of the square and cube roots, double position, etc. Practical arithmetick teaches the various kinds of computation employed in trade.

arithmetico-geometrical (ar-ith-met'i-kō-jē-ō-met'ri-kal), a. Arithmetical and geometrical: a term descriptive of a kind of mean between two quantities obtained by taking both the arithmetical and the geometrical means of the quantities, then the means of these means, and so on, until the two results become identical. Thus, starting with 2 and 3, we obtain successively the following pairs of means:

	Arithmetical.	Geometrical.
First pair,	2.5	2.449490
Second "	2.474745	2.473615
Third "	2.474980	2.473680

The numbers of the last pair being sensibly equal, 2.474680 is the arithmetico-geometrical mean of 2 and 3. This process, invented by Gauss, is useful in calculating elliptic integrals.

arithmometer (ar-ith-mom'e-tēr), n. [= F. arithmomètre, < Gr. ἀριθμός, number, + μέτρον, a measure.] An instrument for performing multiplication and division. The multiplicand is made to appear in one place by setting certain stops or wheels. A handle is then turned, and other motions are made, so as to cause the multiplier to appear in another place. Then the product will be found in a third place. Division and subtraction can be performed in a somewhat similar way. The best-known of these machines is by Thomas of Colmar; the best is by Grant.

arithmo-planimeter (a-rith'mō-plā-nim'e-tēr), n. [C Gr. ἀριθμός, number, + planimeter.] A form of planimeter invented by M. Lalaney.

In this sense most commonly used in the plural, and when used in the singular for the most part referring rather to a particular kind of weapon than to an individual piece.

A description in heraldic terms of shield, crest, etc., is called *blazoning* (which see). The right to bear the arms of the father is inherited by the sons, but in strictness each of the younger sons should add to the paternal shield a label as a mark of cadency; the same right descends to a daughter only if she is her father's heiress. A person inheriting an estate other than the paternal one often assumes the arms of the former possessor, but should in strictness apply to the proper authorities. See *king-at-arms*, *herald*, and *heralds' college*. Arms not paternal may be classed as follows: (a) *Arms of dominion*, or the national arms borne by the sovereign, in which generally the bearings inherited by the prince as an individual have come to have a certain national character. (b) *Arms of community*, as of a corporation, an episcopal see, or the like. Arms assumed by a republic, as by the United States or by one of the States, partake of the nature of both the preceding. (c) *Arms of pretension*, as, specifically, those assumed by a sovereign in assertion of his claim to a realm not actually under his authority, like the *heurs-de-l'ys* of France, which were borne by English sovereigns until 1801. (d) *Arms of succession*, denoting inheritance of an estate, as mentioned above. (e) *Arms of assumption*, or *assumptive arms*, bearings assumed or granted in consequence of an exploit, as the three feathers with the motto *Ieh dien* taken from the slain King John of Bohemia by Edward the Black Prince at the battle of Crécy (1346), and now borne by the Prince of Wales. (f) *Arms of alliance*, as where one spouse impales the arms of the other on his or her shield. (g) *Arms of office*, arms which are the perquisite or appendage of some public position. In all the above cases except (a) and (b), a private individual having a right to such arms charges them with the paternal arms, whether by quartering or otherwise. For the origin and history of arms, see *heraldry*.—**Abated arms.** See *abate*.

—**Adoptive arms.** See *adoptive*.—**Allusive arms**, in *her.*, a bearing or bearings having immediate reference to the wearer's name; thus, the arms of a person named Lamb or Herring would be termed *allusive*, if they included as a bearing a figure of the animal so named. In this way the name De Loupe may have been given to the first earls of Chester because of their bearing a wolf's head, or the name Arundel may be derived from swallows (French *hirondelles*) borne on the shield. The arms of Bolton are a cross-bolt driven through a tun. Castile and Leon had for their chief bearings a castle and a lion respectively. There are many such cases. Also called *allusive heraldry*, *canting heraldry*, *rebus*, and *armes parlantes*.—**Arms-carrying Act.** See *Bill of Rights, under bill*.—**Arms of precision**, firearms rifled, furnished with graded sights, accurately prepared bullets, and appliances calculated to enable them to act with precision and rapidity, and at much greater distances than ordinary weapons. The Armstrong gun and the Springfield and Martini-Henry rifles are examples.—**Assize of arms.** See *assize*.—**Assumptive arms.** See above, 7(c), and *assumptive*.—**Coat of arms.** See *coat*.—**Places of arms**, in *fort.*, parts of the covered way opposite the salient and reentering angles of the counterscarp.—**Repeating arms**, arms that can be discharged a number of times without being reloaded.—**Rifed small arms**, rifles, muskets, carbines, pistols, or revolvers, the bores of which are cut with spiral grooves or "rifles."—**Small arms**, all weapons not requiring carriages, as opposed to *artillery*, and including rifles, muskets, bayonets, pistols, revolvers, sabers, and swords; also, sporting weapons.—**Stand of arms**, a complete set of arms for one soldier, consisting of a musket, bayonet, cartridge-box, and belt, with or without a sword.—**To arms!** a warning equivalent to "arm! take to your arms; make ready for battle." (Compare *alarm*.)—**To bear arms**, to do military service; serve as a soldier.

armadillo (är-ma-dil'ō), *n.* [Formerly also *armadillo*, *armadillo*, *armadile*; < Sp. *armadillo* (= Pg. *armadillo*), dim. of *armado*, armed, with reference to its bony shell. Cf. ML. *armadillus*, a kind of sea-fish.] 1. An American edentate quadruped, of the order *Bruta* (or *Edentata*) and suborder *Loricata*, and of the extant families *Tatusiidae*, *Dasyopidae*, and *Chlamyphoridae*, or of the extinct family *Glyptodontidae*, having a hard shell or carapace like a coat of mail, resulting from a peculiar ossification of the integument and the confluence of numerous small scutes. In the glyptodonts the carapace was entire and fixed, and even in some cases covered the belly as well as the back; but in all the living armadillos the shell is divided into an anterior, a posterior, and an entire or variously divided middle part. When the division of the middle part is complete, the animal can roll itself into a ball. The teeth are numerous, but vary in number and other characteristics with the several genera; in the genus *Prionodontes* they are a hundred in number. The poba is an armadillo of the family *Tatusiidae*, the *Tatusia novae-cincta*, the only one of the group found as far north as the United States. There are other species. The encuberts are the typical armadillos of the family *Dasyopidae*. The peludo is *Dasyppus villosus*. The kabassons constitute the genus *Xenurus*. The kabalassou is *Prionodontes gigas*. The apars are the three-banded armadillos, of the genus *Tolypeutes*. The pichicagos constitute the family *Chlamyphoridae*; they are the smallest and most peculiar forms, being less than a foot long, while the kabalassou is three feet long without the tail. All these animals are mild, timid, and inoffensive, subsisting on roots, leaves, and fruits, sometimes on insects or flesh. They are able to dig into the ground with great rapidity, and escape from their enemies in this way as well as by rolling up in a ball. The flesh is considered good for food.

Armadillo, or Peludo (*Dasyppus villosus*).

2. In *Crustacea*: (*a*) [*cap.*] A genus of isopods, of the family *Oniscidae*, including the pill-bugs, which can roll themselves into a ball like the mammals called armadillos. It was necessary for him . . . to proceed with his twenty men-of-war to the Mediterranean, while his superiors, with the rest of the *armament*, returned to the Channel.

Macaulay, Hist. Eng., xx.

2. Munitions of war; especially, the number and weight of all the guns which a ship of war carries. Within a comparatively short period remarkable changes have occurred in the size and weight of the armament of war-vessels. In the United States, before the civil war, the usual armament for both forts and vessels consisted of 32-pounders. The war led to the construction and use of 15-inch smooth-bore guns, weighing 50,000 pounds, and afterward of 20-inch guns, weighing 100,000 pounds. Rifling was introduced in 1859, and is now universally employed, reliance being placed upon the piercing power of elongated projectiles moving at a great velocity and fired from rifled guns. The United States battle-ship "Indiana" (1893) is armed with four 13-inch, eight 8-inch, four 6-inch, and twenty quick-fire guns. In the British navy, the "Warrior" in 1861, was provided with 43-ton guns; but the weight of metal was successively increased up to the 80-ton guns of the "Indefatigable" (1876) and the 111-ton guns of the "Sans Pareil" (1887). The "Magnificent" (1894), the latest type, is armed with four 12-inch guns, twelve 6-inch guns, and twenty-eight smaller quick-fire guns. The more recent ships of other nations have similar armaments.

See *bole*².—**Armenian cement**, a cement made by soaking isinglass in water until it becomes soft, and then mixing it with spirit in which a little gum mastic and ammoniacum have been dissolved. It is used to unite pieces of broken glass, to repair precious stones, and to cement them to watch-cases and other ornaments.—**Armenian Church**, the ancient national church of Armenia. It maintains that it was founded as early as A. D. 34; but while traces of Christianity are found previously to the fourth century, the conversion of the country as a whole was the work of St. Gregory the Illuminator, who began his evangelistic labors about the year 301; and from his name it is sometimes known also as the Gregorian Church. The Armenian Church has for the most part remained estranged from the orthodox Greek Church since the latter part of the fifth century, when it rejected the decrees of the Council of Chalcedon (A. D. 451). It has therefore been credited

with holding Monophysite or Kutchian doctrine, but many authorities hold that the differences arose from misunderstandings occasioned by the incapacity of the Armenian language to express the finer distinctions of Greek terminology. The Armenian Church accepts all the first seven ecumenical councils, with the exception of that of Chalcedon, the doctrines of which they seem, however, to hold under a different phrasing. Their doctrines and usages closely resemble those of the Greek Church, with the exception of their use of unleavened bread and of an unmixed chalice in the eucharist. The priesthood is hereditary. The bishops are governed by four patriarchs, the primate being the catholicos, who resides in the monastery of Etchmiadzin, a short distance north of Mount Ararat. Since the fifteenth century a large number of the Armenians have joined the Roman Catholic Church and are known as *United Armenians*. A separate Armenian Protestant Church has also recently been formed.—**Armenian era**, *liturgy*, etc. See the nouns.—**Armenian stone**, a soft blue carbonate of copper; also, a commercial name for lapis-lazuli.

Arminian (är-min'i-an), *n.* and *a.* [*< NL. Arminianus*, *< Arminius*, Latinized from the name of *Harmensen*.] **I, n. 1.** One of a Christian sect named from James Arminius (Jacobus Harmensen), a Protestant divine of Leyden, Netherlands (1560-1609). Its members were also called *Remonstrants*, from a statement of their views in the form of a remonstrance presented to the States-General in 1610. They separated from the Calvinists, objecting to their doctrine of predestination. The sect as a distinct organization is chiefly confined to the Netherlands, where it numbers only about twenty congregations and a few thousand adherents.

2. A believer in the Arminian doctrines. These doctrines are: (1) Conditional election and reprobation, in opposition to absolute predestination as taught by

Calvin. (2) Universal redemption, or that the atonement was made by Christ for all mankind, though none but believers can be partakers of its benefits. (3) That man, in order to exercise true faith, must be regenerated and renewed by the operation of the Holy Spirit, which is the gift of God. (4) That this grace is not irresistible. (5) That believers are able by the aid of the Holy Spirit to resist sin, but that there is always in this life the possibility of a fall from grace, in opposition to the Calvinistic doctrine of the perseverance of the saints. Protestants in general shared in the controversy excited by the promulgation of these doctrines, and all opponents of Calvinism are still often characterized as Arminians. In the Church of England Arminianism was especially favored by the High Church party. The Methodist denomination was divided on the subject, the followers of Wesley being Arminians, and those of Whitefield Calvinists.

Cf. *solstice*, *interstice*.] A temporary suspension of hostilities by convention or agreement of the parties; a truce.

But, while an *armistice* is an interval in war and supposes a return to it, a peace is a return to a state of amity and intercourse, implying no intention to recommence hostilities. An *armistice* again leaves the questions of the war unsettled, but a peace implies in its terms that redress of wrongs has been obtained, or that the intention is renounced of seeking to obtain it.

Complete Armor of 1195-1205.

1. Conical helmet set upon the hood. *A*, hood of leather; *B*, camail of chain-mail secured to the hood. This is here separate from the hauberk, though it was often a part of it. The hauberk of mail reaches to the knees and is divided before and behind; the gambeson has a long skirt, and is worn under the hauberk and divided in the same way; the belt is only a leather strap with buckle; the shield is triangular and very much rounded or bowed sidewise, and straight lengthwise; the hose, or chausses, are of mail, and the shoes of leather. The brougne was often worn instead of the hauberk; the closed helmet, rarely. The chausses often covered the feet, replacing the shoes.

Armor and Equipment for man and horse, about 1290.

2. A heaume or large helmet, worn over a steel cap (mortier or secret). It had no vizor nor avoet-aille, but was worn only in fight, and rested directly upon the armor of the neck. *A*, ailette (one on each shoulder); *B*, rerebrace; *C*, cubitiere, or elbow-guard; *D*, genouilliere, or knee-guard; *E*, greave, or bainberg; *F*, surcoat of stuff worn over the armor; *G*, barbs of the same make as the body-armor of the rider; *H*, chamfron of hammered iron; *I*, housings of stuff affording considerable protection. The armor of the body and limbs of the rider is of the fashion called banded mail; that for the body, therefore, is not properly a hauberk, perhaps a brougne.

pose, as thick skins, garments of linen or of silk, stuffed with vegetable fiber, or made of many thicknesses of material, thin plates of horn or metal, sewed to some textile fabric and lapping over one another like scales, etc. Usually the headpiece was the first piece of armor to be made in solid metal. (See *helmet*.) The Greeks had a solid cuirass from a very early period. (See *cuirass* and *thorax*.) This, with the helmet and the greaves (see *greave*), constituted the whole armor of the heavy-armed Greek warrior of historic times. The Roman legionary was in general similarly armed, sometimes wearing only one greave. Chain-mail was introduced in the armor of the Roman soldiery. The Norman invaders of England in 1066 wore a conical helmet with a nasal or strong projecting piece of iron coming down over the nose, and long gowns of stuff to

3. *A*, basinet with vizor; *B*, large camail of chain-mail; *C*, corselet of separate plates of iron or steel, each one riveted to an inner doublet or jacket of linen, silk, or leather (this corselet comes no higher than the armpits, and corresponds exactly to the later pansiere); *D*, complete brassart; *E*, cubitiere, which is, however, included in *D*; *F*, gauntlet of leather with bracelet or wrist-guard of steel, and back of hand covered with a steel plate; *G*, skirt of six taces or tassets sliding one over another like the shell of a lobster's tail (each tasset is riveted to a series of vertical straps of stuff or leather); *H*, military belt secured to the lowest tasset; the sword is not secured to the belt, but to a hook or staple riveted to the cuirse; *I*, cuirse, or thigh-piece, in two parts connected by hinges and fastened by hooks; *J*, jamb, or leg-piece, in two parts like the cuirse; *K*, genouilliere, or knee-guard; *L*, solerlet of small plates sliding one over another.

Complete Suit of Plate-Armor, now in Paris, date about 1440—the epoch of greatest perfection of defensive arms.

4. *A*, armet; *B*, gonnet of three plates or splints sliding one over the other; the lowermost one passing beneath the plastron; *C*, *C*, pauldrons, each of three sliding plates, the right-hand pauldron smaller than the left, and its lowest plate capable of being lifted to allow the lance to be put in rest; *D*, adjustable lance-rest; *E*, plastron, or upper part of corselet; *F*, pansiere, or lower part of corselet (these two pieces slide one upon the other so that the body can bend forward, and the pansiere is so cut away over the hips that the body can bend sidewise); *G*, skirt of taces or tassets; *H*, other tassets forming thigh-guards (the large lowest splint is often called the tuille); *I*, complete brassart in many pieces perfectly articulated and forming a connected sleeve, composed of rerebrace, vambrace, and cubitiere; *J*, gauntlet having no bracelet, but secured to vambrace of brassart; *K*, cuirse; *L*, jamb; *M*, genouilliere, having two sliding splints above the main knee-guard; *N*, solerlet, with the terminal splint removable when the wearer dismounted.

which were sewed rings or plates of metal, and the leaders had leg-coverings of similar make. A century later chain-mail was in common use. The knights of the time of Richard I. of England (Cour de Lion, 1189-1190) wore a long hauberk of chain-mail, reaching to the knee or below, with long sleeves closed at the ends so as to form gloves, and with openings in the sides through which the hands could be passed, leaving the gloves hanging down from the wrist; hose of the same make, either covering the feet or worn with shoes of strong leather; or sometimes long hose of leather laced or buckled like modern long gaiters. A hood, called the camail, sometimes of chain-mail, sometimes of leather, covered the head and descended to the shoulders, and upon this rested the iron helmet, either of conical form or rounded or acorn-shaped, without vizor, pressing on the head at its lower edge, where it was often secured to the camail, and rising above the crown of the head. Very rarely in this reign a closed helmet was used, as seen on a seal of King Richard I.; helmets of this form became common early in the reign of Henry III. (1216-1272). By the time of Henry IV. (1399-1413) and his invasion of France (1411), the knight was completely clothed in armor of plates, chain-mail being used at the junction of the limbs with the body, at the elbow- and knee-joints, and for a hood covering the top of the corselet. Finally, under Henry VI. (1422-1461), at about the time that the English were driven out of France (1453), the suit of armor reached its complete development, being forged of thin steel to fit the body and limbs, weighing not over 60 or 70 pounds in all, and allowing of free movement. This, however, was extremely costly. The armor worn in jousts and tournaments was very different after the twelfth century from that worn in war, being heavier, and neither allowing the knight to dismount without assistance nor affording him adequate protection if dismounted. For war, in spite of the general adoption of firearms, armor, though not investing the whole body, continued to be worn by officers and mounted men until the close of the seventeenth century, in the wars of Louis XIV.'s reign, and, indeed, survives to this day in the helmets and cuirasses of certain corps of cavalry. (The cuts are from Viollet-le-Duc's "Dict. du Mobilier français.")

4. In *magnetism*, same as *armature*, 6. [*Rare.*]—Masled armor. See *masled*.—Submarine armor, a water-tight covering worn by a diver; a diving-dress. The essential part of the armor is a metal helmet, large enough to permit free movement of the head within, provided with windows for outlook, and connected with a breastplate which prevents any compression of the lungs. The remainder of the suit is of india-rubber. Pure air is pumped through a tube opening into the helmet and is projected against the windows, removing the moisture which condenses upon them; it then becomes diffused and is breathed, the impure air passing out through a similar tube. Weights are attached to the waist, and leaden soles to the shoes. A signal-line affords communication with attendants above.

armor-plate (är'mor-plät), n. A metallic plate, usually of iron or steel, intended to be attached to the side of a ship or the outer wall of a fort, with the view of rendering it shot-proof. A protection of iron for ships was proposed in the early part of the present century, but the first practical application of it was probably to the French floating batteries used in the Crimean war. The success of these led the French to construct "La Gloire," the first of the so-called ironclads, completed in 1861. This vessel, which had 4-inch wrought-iron plates over a backing of about 3 feet in thickness, was speedily followed in 1861 by the "Warrior" and other ships of the same class built by the British government, with 4-inch plates over 18 inches of teak backing. Both the thickness and protective power (see *Harvize*) of the armor have been increased as more powerful ordnance has been invented, the plates of the British battle-ship "Inflexible" (1876) having a maximum thickness of 24 inches. In recent foreign ships the maximum is about 18 inches. In the United States navy the maximum thickness of armor varies in the monitors from 10 to 18 inches, and in the latest battle-ships (as the "Indiana," 1893) is 17 inches. See *ironclad*.—Armor-plate cradle, a device used for bending armor-plate. It is placed near the furnace, and the plate is laid within it while hot. The bed is formed by numerous cross-bars of iron, so placed that their upper edges correspond to the curve desired in the finished plate. Bars are similarly placed above the plate, and the bending is effected by driving wedges between the upper bars and the upper surface of the plate, which is thus forced down upon the bed-bars.—Compound steel-faced armor-plate, armor-plate made of iron faced with steel. It is made up to 24 inches in thickness, and the largest plates weigh about 50 tons. The steel face is ordinarily about one third of the thickness of the whole plate. The two metals are welded together by heavy rolls, through which they are passed while hot, and thus make a solid plate.

armor-shelf (är'mor-shelf), n. An iron shelf or ledge projecting from the sides of an armored war-vessel, and forming a support upon which the armor-plate and armor-backing rest.

sons: as, *pride* in one's country; *disdain* of a base suggestion. *Pride* primarily respects the temper of the mind, not being necessarily manifested or directed toward others; it is the general term for an unreasonable estimate of one's own superiority in any respect. As it comes into relation and action, it may receive other titles. Thus, *arrogance* is, at its simplest, *pride* with contempt of others, and is essentially the same as *disdain*. In action, *arrogance* is the assertion of exorbitant claims to rank, dignity, estimation, homage, power, etc. *Presumption* is often used for *arrogance*, but more properly expresses a self-conceited and self-important forwardness to run risks, take liberties, and crowd in where one does not deserve to be. *Presumption* helps itself to what it wants, while *arrogance* claims from others, and feeds its *pride* by seeing them yield. *Presumption* is less selfish than *arrogance*, but more conceited and headstrong. *Assumption* has added to its other meanings a bad sense, kindred to *presumption*; it means a disposition to do what does not belong to one to do, and sometimes to claim to be more than one is. *Haughtiness*, like *disdain* and *loftiness*, dwells upon the inferiority of others quite as much as upon its own elevation; it is equally applicable to spirit and to manner. *Disdain* is a mingling of lofty contempt with aversion, abhorrence, or indignation. *Superciliousness*, as befits its derivation, is chiefly applied to manner; it is a manifested haughtiness. *Insolence* is exhibited not only in manner, but in conduct and language; it is pride or haughtiness, shown in contemptuous or overbearing treatment of others, especially by words; from an equal or an inferior it is an outrageous kind of impertinence. See *impudence*, *egotism*, and *scorn*.

Your *pride* is yet no name for mine,
Too proud to care from whence I came.

Tennyson, Lady Clara Vere de Vere.

be shot from a bow. Arrows have nearly universally been made with a light, straight shaft of wood, fitted

with feathers at the nock-end to steady the flight, and with a pointed head of various forms, often barbed so as to remain fixed in the object pierced. Those used in the middle ages rarely had barbed heads; sometimes the head was flat, sometimes conical, and fitted to the shaft like the ferrule of a walking-stick. The arrow-heads of the North American Indians were of flint, obsidian, or other hard stone, or of bone, as well as of metal, and were often barbed. They were secured to the shaft by lashings of hide or sinew. Arrow-heads intended to be poisoned, as among South American Indians, are said to be fastened lightly, so as to leave the shaft and remain in the wound. The feathers at the butt of the shaft seem to have been generally used in all ages, and are so set, or are of such a form, as to give to the arrow a rotary movement, like that of a rifle-ball. The arrow of the crossbow is called a *bolt* or *quarrel* (which see).

It. *arsenico*, < L. *arsenicum, arrenicum, arhenicum*, < Gr. ἀρσενικόν, yellow arsenic, orpiment, lit. 'masculine,' being neut. of ἀρσενικός, ἀρσενικός, masculine, < ἄρσεν, ἄρσεν, male, also strong, = Zend *arshua*, a man, male. The name is said to refer to the powerful qualities of arsenic.] 1. 1. A yellow mineral, called specifically *yellow arsenic*; the trisulphid of the element to which it has given its name; orpiment. [The original use.]—2. Chemical symbol, As; atomic weight, 75. A chemical element having a grayish-white color, a metallic luster, and a specific gravity of 5.727. Under ordinary pressure it does not melt, but at 356° F. it passes from the solid state into vapor of a lemon-yellow color. It tarnishes rapidly in moist air at ordinary temperature, and heated in air is oxidized to arsenic trioxid, As₂O₃. Arsenic occurs in nature uncombined, but much more commonly in combination. The chief ores are the two sulphids, realgar (As₂S₂) and orpiment (As₂S₃), arsenical pyrites or mispickel (FeSAs), and arsenides of iron, nickel, and cobalt. Most of the arsenic of commerce is prepared in Bohemia and Saxony or in England. Arsenic itself is little used in the arts. Its salts, however, have great commercial importance. With oxygen arsenic forms two compounds, the more important of which is arsenic trioxid (As₂O₃), a violent poison, the ratsbane, white arsenic, or simple arsenic of the shops. It is prepared by a process of sublimation from arsenical ores, and is sold as a white crystalline powder or in glassy translucent masses, which are odorless, nearly tasteless, and slightly soluble in water. The most reliable antidote is freshly prepared hydrated sesquioxid of iron, which should be given in considerable quantity after the stomach has been freed from the poison as completely as possible by an emetic given with bland liquids, such as milk, flour and water, or white of egg and water, which serve to envelop the poison and effect its complete ejection from the stomach. In the absence of hydrated sesquioxid of iron, large quantities of a paste made of chalk or magnesia and castor-oil may be used. Arsenic trioxid is used in medicine, especially in the treatment of certain nervous and skin diseases, and in the arts as the basis for preparing arsenical salts and certain pigments, and largely in the manufacture of glass. Arsenic has two oxygen acids, whose salts are the arseniates and arsenites. Free arsenious acid is not known. Arsenic acid occurs in commerce as a thick acid liquid, and is largely used in the manufacture of aniline red, and sodium arseniate is much used in calico-printing. Arsenic disulphid (As₂S₂) occurs native as realgar (see *realgar*), and is made artificially under the name of *ruby sulphur*. Both the native and the artificially prepared sulphids are used as pigments, as is also arsenic trisulphid (As₂S₃), or orpiment, also called *king's yellow*.

arsis (ār'sis), *n.* [L., < Gr. ἄρσις, a raising, elevation, < ἀίρειν, raise, lift up.] 1. In *pros.*: (*a*) Originally, the metrically unaccented part of a foot, as opposed to the *thesis* or part which receives the ictus or metrical stress. (*b*) In prevalent modern usage, that part of a foot which bears the ictus or metrical accent, as opposed to the metrically unaccented part, called the *thesis*. According to the original Greek usage, *arsis* denoted the raising of the foot in dancing, or of the hand in beating time, and therefore the unaccented part of the metrical foot, and *thesis* the fall of the foot or of the hand in dancing or heating time, and therefore the accented part of the prosodial foot. Latin writers show great confusion in the application of these terms, sometimes employing them in conformity with Greek usage, sometimes interchanging their meaning, sometimes assigning still other meanings to them. Some modern writers have employed them with their original Greek significations, as given above under (*a*); but the meanings given under (*b*), and believed to be supported by the Latin writers, are those generally adopted at the present time.

Mr. Mill says, "Art is but the employment of the powers of nature for an end." Yes; but the employment is the art. That use or employment of the natural elements is precisely the function of the intelligence and the will, which differs from nature, in its proper sense, as the active differs from the passive.

The object of science is knowledge; the objects of art are works. In art, truth is the means to an end; in science, it is only the end. Hence the practical arts are not to be classed among the sciences.

Whewell.

Theorists, by an observation of particulars and by generalizing on them, attempt to construct a system of scientific propositions with respect to a certain subject; upon which system a set of rules intended for the guidance of practice may be founded. These rules form an art.

Sir G. C. Lewis, *Authority in Matters of Opinion*, iii.

5. [It. *arte*.] An organized body of men practicing a given trade, and carrying out an established system of rules and traditions; a guild.

The city [Florence] was first divided into arts, in the time of Charles I. . . . These arts or companies . . . were at first but twelve, but afterwards they were increased to twenty-one, and arrived at such power and authority that in a few years they wholly engrossed the government of the city. . . . Seven of them were called the greater arts, and fourteen the less.

J. Adams, *Works*, v. 54.

A portion of the taxes was assigned to the work [building the Duomo, 1331], and the charge of it was committed to the Art of Wool; that is, to the corporation of the dealers in wool, the richest and most powerful of the Arts of Florence.

C. E. Norton, *Church-building in Middle Ages*, p. 211.

6. A branch of learning regarded as an instrument of thought, or as something the knowledge of which is to be acquired in order to be applied or practised: chiefly in the plural, and in such phrases as master of arts, faculty of arts, etc. Formerly in the universities the seven liberal arts were the Roman trivium, grammar, logic, and rhetoric, and the Pythagorean quadrivium, arithmetic, music, geometry, and astronomy. But by art, in the middle ages, was usually meant logic, that being the principal study in the faculty of arts.

skilfully painted, but devoid of art.—9. The actual production or construction of objects beautiful in form, color, or sound; the practical application of esthetic principles, as in the departments of production specifically called the fine arts (which see, below); especially, painting and sculpture.

Nothing is better founded than the famous aphorism of the rhetoricians, that the perfection of art consists in concealing art.

Campbell.

Art and part, in *Scotts Law*, instigation; abetment.

By art is understood the mandate, instigation, or advice that may have been given towards committing the crime; part expresses the share that one takes to himself in it by the aid or assistance which he gives the criminal in the execution of it.

Erskine.

Bachelor of Arts. See *bachelor*.—**Black art**, necromancy; sorcery; the fancied power of performing wonderful feats by preternatural means, especially means derived from the assistance of the powers of evil; opposed to *white art* or *white magic*, that is, innocent magic. [Black art is a kind of translation of Middle Latin *magica*, *magia*, a corruption, due to confusion with Latin *niger*, black (see *negro*), of *necromantia*, from the Greek *νεκρομαντεία*, necromancy. The confusion was assisted by the common practice of painting the devil black.]—**Decorative art**, that branch of art which has for its primary object merely the pleasure of the eye, especially in decoration which is subservient to architectural features or to form, as in ceramics.—**Faculty of arts**, the lowest and fundamental faculty of the four in the old universities; the faculty of philosophy, which had charge of students upon their first entrance and until they took the degree of master of arts. When a boy could read, write, and had mastered the elements of Latin grammar, he was considered ready to begin his studies in logic at the university. The instruction in the faculty of arts was sharply separated from the tests preliminary to the conferring of degrees. In the middle ages the subjects of the ordinary lectures were Priscian's grammar, the *Isagoge* of Porphyry, Aristotle's *Organon*, and the De Divisione and three books of the *Topics* of Boetius, while the extraordinary lectures related to rhetoric, ethics, and a little geometry and astronomy. Frequent disputations constituted the only exercises for the scholars; and the masters disputed in public once a week. The degrees conferred at the recommendation of the faculty of arts were those of bachelor and master. In Paris the degree of licentiate was a distinct one intermediate between the others. The baccalaureate or determination was not originally a degree. Upon the reform of the universities in the sixteenth century logic gave place to the humanities, and during the present century natural science has had a more considerable place in the instruction.—**Fine arts**, those arts which seek expression through beautiful modes; specifically, architecture, sculpture, painting, and engraving.—**Hermetic art.** See *hermetic*.—**Master of Arts.** See *master*.—**Military art.** See *military*, *a*.—**Plastic art or arts**, sculpture, including all subordinate or related arts by which objects are represented in the round or in relief.—**Work of art**, anything in the formation or into the accomplishment of which art in any sense has entered; specifically, a production of any one of the fine arts, but especially of one of the imitative members of the group, as a statue or a painting.

That is best which lieth nearest;

Shape from that thy work of art.

Longfellow, *Gaspard Becerra*.

=Syn. 2. Aptitude, readiness, address, tact, adroitness, contrivance.—3. Shrewdness, subtlety, cunning, artifice, deceit, duplicity.—4. *Art, Science.* The essential difference between an art and a science is in aim. "Science and art may be said to be investigations of truth, but science inquires for the sake of knowledge, art for the sake of production." (Karlsruhe.) Hence, they differ somewhat in that with which they are concerned. "An art directly and immediately concerns itself with a faculty. . . . It fastens upon that, and keeps it ever in its view as it teaches how that may be developed, trained, and guided. A science, on the other hand, regards rather the product of [a] faculty, and, keeping its view directly upon that, proceeds to unfold its nature and proper characteristics." (H. N. Day, *Art of Discourse*, § 1.) Incidental to this difference is a difference in method, science being analytic and critical, while art is synthetic and constructive. In the matter which makes up the body of the two, an art involves the means of discipline in the use of the knowledge which may have been furnished by a corresponding science. The same branch of knowledge may be regarded as either a science or an art. It may be viewed theoretically, as seeking, coordinating, arranging, and systematizing knowledge, and by observation, comparison, abstraction, and generalization deducing laws; or as, with more or less reference to such preparatory work, framing rules which are the lessons of experience, and are designed to facilitate work or give it superior excellence. The more complete the scientific basis of an art, the more perfect the art. There is a secondary use of the word science by which it stands for an art that thus rests upon a science, as in the following:

The fundamental conception of the occupation of the architect embraces the two ideas of science and art. Architecture as an art is the work of the skilled hand; as a science, it is that of the informed and cultivated brain.

authority over the moon, which belonged more particularly to her kinswomen Hecate and Selene. In art, Artemis is represented as a virgin of noble and severe beauty, tall and majestic, and generally bearing bow and quiver as the huntress or mountain goddess. She was identified by the Romans with their Diana, an original Italian divinity.

Wormseed or santonica consists of the small unexpanded flower-buds of *A. pycniflora*, extensively collected on the steppes of Turkestan and employed as an antihelmintic. The southernwood of gardens, *A. Abrotanum*, and the tarragon, *A. Dracunculus*, have a fragrant aromatic odor. Of the numerous North American species, the best known are *A. tridentata* and *A. cana*, which are the sage-brush of the western plains, the first especially covering large areas in the valleys of the Great Basin. 2. One of a system of cylindrical, membranous, elastic, and muscular vessels or tubes, which convey the blood from the heart to all parts of the body by ramifications which as they proceed diminish in size and increase in number, and terminate in minute capillaries which unite the ends of the arteries with the beginnings of the veins. There are two principal arteries: the *aorta*, which rises from the left ventricle of the heart and ramifies through the whole body, and the *pulmonary artery*, which conveys venous blood from the right ventricle to the lungs, to undergo arterialization. Most arteries are composed of three coats: an outer or fibrous, of condensed connective tissue well supplied with blood-vessels and nerves; a middle or elastic, consisting chiefly of circular, non-striated, muscular fibers; and an inner, thin, smooth, and dense, composed, from without inward, of an elastic fenestrated membrane, a layer of connective tissue, and a lining of endothelium. The outer coat is the (*tunica*) *adventitia*; the middle, the (*tunica*) *media*; the inner, the (*tunica*) *intima*. The arteries in the human body which have received special names are about 350 in number. They range in caliber from more than the thickness of a finger to microscopic dimensions.

In an artesian well proper the water rises to the surface and overflows. The geological conditions permitting this are not general, since it is necessary that the region should have a more or less complete basin-structure, and that there should be a series of permeable covered by impermeable beds. In the United States any deep bored well is called *artesian*, even if the water has to be pumped from a considerable depth. Artesian wells vary in depth from less than 100 to nearly 4,000 feet, some of the deepest borings being for petroleum.

Artur*.] Of or pertaining to King Arthur, one of the last Celtic chiefs of Britain (the hero of a great literature of poetic fable, and whose actual existence has been questioned), or to the legends connected with him and his knights of the Round Table.

Arthurian legend is not, and never has been, to the English national mind what the myths which supplied the subjects of Attic tragedy were to the Greek.

Artichokes were introduced into

Europe early in the sixteenth century.—**Jerusalem artichoke** [corruption of *H. girasole artichocco*, sunflower-artichoke], the *Helianthus tuberosus*, a species of sunflower, native of Canada and the upper Mississippi valley. It was cultivated by the aborigines for its sweet and farinaceous tuberous roots, and was introduced at an early date into Europe, where it is raised in considerable quantities as an article of food. The plant was long believed to be a native of Brazil, and it is only recently that its true origin has been ascertained.

article (är'ti-kl), *n.* [*ME. article*, < *OF. article*, *F. article* = *Sp. articulo* = *Pg. articulo* (in anat. and bot.), *artigo* = *It. articolo, articulo*, < *L. articulus*, a joint, limb, member, part, division, the article in grammar, a point of time; prop. dim. of *artus*, a joint, akin to *Gr. ἄρθρον*, a joint, article, < $\sqrt{\text{ar}}$, fit, join: see *arm*¹, *arm*², *art*², etc.] 1†. A joint connecting two parts of the body.—2. One of the parts thus connected; a jointed segment or part.

Wollaston, Relig. of Nat., v. 99.

10†. The number 10, or any number ending in a cipher.—11. In *gram.*, a word used attributively to limit the application of a noun to one individual or set of individuals, and also to indicate whether the noun used signifies indefinitely one or any one of the class which it names, or definitely a specific object of thought. The two articles are regarded as a distinct part of speech. They are in English *an* (before consonant-sounds) and *the*. *An* was originally the same word as *one*, and in meaning is an unemphatic *any*; it singles out an individual as an example of a class, any other member of the class being capable of serving as example equally well. *A* or *an* is accordingly called the *indefinite article*. *The* was originally a demonstrative pronoun, and in meaning is an unemphatic *this* or *that*; it points out a particular individual or set of individuals, and is consequently known as the *definite article*. Articles may therefore be regarded as a specialized and segregated class of pronouns. Some languages, as Latin, have no articles; others, as Hebrew and Greek, have the definite article only. The indefinite article is always of later formation than the definite. [The name *article* is a translation of the word ἄρθρον, joint, which was applied by the Greek grammarians to the one article of that language (the definite), on account of its frequent use after the manner of a relative to join an adjective to a noun:

as, ἄρθρον ὁ ἀγαθός, literally, man the good, for (the) man who (is) good, that is, the good man.]—**Articles of association, or articles of incorporation**, the certificate filed, in conformity with a general law, by persons who desire to become a corporation, and setting forth the rules and conditions upon which the association or corporation is founded.—**Articles of Confederation**.—**Articles of faith**, the main or essential points of religious belief; specifically, an authoritative and binding statement of such points as held by a particular church or denomination; a doctrinal creed.—**Articles of impeachment**, the accusations in writing which form the basis of an impeachment trial. They take the place of the indictment in ordinary criminal, and of the declaration or complaint in civil, actions.—**Articles of Perth**, five articles agreed upon at a General Assembly of the Church of Scotland convened by James VI. in 1618, enjoining certain episcopal observances, such as the observance of feast-days, kneeling at the Lord's supper, etc. They were ratified by the Scotch Parliament in 1621, and became a subject of bitter controversy between the king and the people.—**Articles of the peace**, an obligation to keep the peace for a certain time, under a penalty, and with or without sureties, imposed upon an individual against whom some one has exhibited a complaint that there is just cause to fear that the party complained of will burn the complainant's house or do him some bodily harm, or procure a third person to do it.—**Articles of Schmalkald**, articles of Protestant faith drawn up by Luther, and submitted to a meeting of electors, princes, and states at Schmalkald (or Schmalkalden), Germany, in 1537, designed to show how far the Protestants were willing to go in order to avoid a rupture with Rome.—**Articles of war**, a code of regulations for the government and discipline of the army and navy. In Great Britain they are embodied in the Mutiny Act, which is passed every year. The articles of war of the United States are 128 in number; anything relating to the army not comprehended therein is published in general orders or in established regulations, issued from time to time by the War Department, copies of which are furnished and read to the troops.—**City article**. See *city*.—**In the article of**, in the matter of; as regards.

Lords of the Articles. See *lord*.—**Marriage articles**. See *marriage*.—**Memorandum articles**. See *memorandum*.—**The Five Articles and the Five Points**, statements of the distinctive doctrines of the Arminians and Calvinists respectively, the former promulgated in 1610 in opposition to the restrictive principles of the latter, which were sustained by the Synod of Dort in 1619, and are the following: particular predestination, limited atonement, natural inability, irresistible grace, and the perseverance of saints. The discussion of these differences at that time is sometimes called the *quarterly controversy*.—**The Lambeth Articles**, nine articles drawn up in 1595 at Lambeth, England, intended to embody the Calvinistic doctrine respecting predestination, justification, etc. They were never approved by the church in any regular synod, and therefore possess no ecclesiastical authority.—**The Six Articles**, sometimes called the "whip with six strings," articles imposed by a statute (often called the Bloody Statute) passed in 1539, in the reign of Henry VIII. They decreed the acknowledgment of transubstantiation, the sufficiency of communion in one kind, the obligation of vows of chastity, the propriety of private masses, celibacy of the clergy, and auricular confession. Acceptance of these six doctrines was made obligatory on all persons under the severest penalties. The act, however, was relaxed in 1544, and repealed by the Parliament of 1549.—**The Thirty-nine Articles**, a statement of the particular points of doctrine, thirty-nine in number, maintained by the Church of England, first framed by an ecclesiastical commission in forty-two articles (1552), and revised and promulgated in thirty-nine articles by a convocation held in London in 1562-63. With some alterations they were adopted by the Church of Ireland in 1635, and by the Scottish Episcopal Church in 1804, and, with certain modifications, by the Protestant Episcopal Church of the United States in 1801.—**The Twenty-five Articles**, the doctrinal basis of the Methodist Episcopal Church, substantially the Thirty-nine Articles of the Church of England, with the omission of the 3d, 8th, 13th, 15th, 17th, 18th, 20th, 21st, 23d, 26th, 29th, 33d, 34th, and 37th. They were originally framed by John Wesley, and, with some modification, were adopted, substantially as now held, in 1784.

Articulata (är'tik'ü-lä'tä), *n. pl.* [NL., neut. pl. of *L. articulatus*, jointed: see *articulate*.] In *zool.*, a name variously applied. (a) In Cuvier's system of classification, the third prime division of the animal kingdom, including all segmented invertebrates in which the body is made up of a series of rings (metameres), is endowed with a ganglionated nervous system, and possesses distinct respiratory organs. It is divided into five classes, *Crustacea*, *Arachnida*, *Insecta*, *Myriapoda*, and *Annelides*. This division corresponds to the *Annulosa* of some zoologists, but neither of these terms is now recognized by leading naturalists. Cuvier's first four classes of *Articulata* are now made the phylum *Arthropoda*, while his *Annelides* are referred to another phylum, *Vermes*. (b) One of two orders of *Brachiopoda*, sometimes styled the *Arthropomata* (which see), the other order being called *Inarticulata*. It corresponds to the arthropomatus *Brachiopoda*, containing those brachiopods in which the shell is hinged, the mantle-lobes are not entirely free, and the intestine is caecal. (c) One of two divisions of cyclostomatous polyzoans, containing the families *Salicornariada* and *Cellulariada*: opposed to *Inarticulata*. (d) One of two divisions of cyclostomatous polyzoans, represented by the family *Crisiida*. Also called *Radicata*. (e) One of two divisions of ctenoids, the other being *Tessellata*.

articulate (är'tik'ü-lät), *a.* and *n.* [*< L. articulatus*, jointed, distinct (applied particularly to utterance), pp. of *articulare*: see *articulate*, *v.*] **I. a.** 1. Jointed; segmented; articulated: as, an *articulate* limb; an *articulate* animal.—2. Specifically, having the character of the *Articulata*.—3. Jointed by syllabic division; divided into distinct successive parts, like joints, by the alternation of opener and closer sounds, or the intervention of consonantal utterances (sometimes also of pause or hiatus) between vowel sounds: said of human speech-utterance, as distinguished from other sounds made by

human organs, and from the sounds made by the lower animals. The terms *articulate*, *articulation*, etc., as applied to human utterance, are not seldom misunderstood and wrongly used as if the "jointing" intended were that of the physical organs of utterance, a narrowing or closing of the organs at some point or points. Such action, however, belongs to all utterance, articulate or inarticulate, whether of man or of the other animals. See *consonant*, *syllable*, *vowel*.

Macaulay, *Hist. Eng.*, xxi.

=*Syn.* *Artifice*, *Maneuver*, *Stratagem*, *Wile*, *Trick*, *Ruse*, *Finesse*, device, contrivance, cunning, craft, deception, cheat, fraud, guile, imposition, dodge, subterfuge, double-dealing. These words generally imply a careful endeavor to compass an end by deceiving others, not necessarily, however, with evil intent. They all imply management and address. An *artifice* is prepared with art or care; it is craftily devised. *Maneuver* suggests something more elaborate or intricate, a carefully contrived movement or course of action for a definite purpose; it is the quiet or secret marshaling of one's intellectual or other resources to carry a point. *Stratagem* is, like *maneuver*, a figurative term drawn from war; it is upon a larger scale what *wile* is upon a smaller, a device to deceive one who is the object of an imagined warfare, so that we may catch him at a disadvantage and discomfit him, or, more generally, a carefully prepared plan to carry one's point with another—to capture it or him, so to speak. A *wile* may be peculiarly coaxing or insinuating. *Trick* is the lowest and most dishonorable of these words; it may be a low or underhand act, in violation of honor or propriety, for the purpose of cheating, or something as bad. A *ruse* is a deception of some elaborateness, intended to cover one's intentions, help one to escape from a predicament, etc.; it is a plausible way of bringing about what we desire to happen, without apparent interference on our part. *Finesse* is subtlety in action; it is a more delicate sort of *artifice*. See *artful*, *evasion*, and *fraud*.

The premaxillary bones are more or less flattened toward their ends, and in the ruminants bear no teeth. The stomach is more or less subdivided and complex. This group includes all the ungulate (not the solidungulate, however) animals domesticated from time immemorial, as the ruminants and the pigs, all the wild ruminants, as the deer and antelope, and the peccaries and hippopotamuses.

The lists of them never give more than nine names, but the college was supposed to have been instituted by Romulus with twelve members, consisting of himself and his eleven foster-brothers, sons of his nurse Acca Laurentia. One of their principal duties was the annual performance of the public *ambarvalia* on the borders of the country, at the same time with the private ones. See *ambarvalia*. It contains those murine rodents which (except *Erotomys*) have the following characters: perennially growing, prismatic, rootless molars, with flat crowns and serrate periphery; incisors usually broader transversely than in the opposite direction; the root of the under incisor sometimes causing a protuberance on the inner side of the mandibular ramus between the condyloid process and the strong hamulate angle of the mandible, which latter attains the level of the molar crowns; the zygomatic high and wide, not dipping to the level of the arched palate, and the nasal bones not produced beyond the premaxillaries; and the dental formula of 16 teeth, there being 1 incisor and 3 molars on each side of each jaw, without any canines or premolars. The *Arvicolinae* are especially characteristic of the northern hemisphere, and are very abundant in high latitudes. They include all kinds of voles or field-mice properly so called, the water-rat of Europe, the meadow-mice of America, the Lemmings, the muskrat, etc. The leading genera are: *Erotomys* (Cuvier), *Arvicola* (Lacépède) with its several subdivisions, *Synaptomys* (Baird), *Modes* (Dallas), *Cuniculus* (Wagner), and *Fiber* (Cuvier). Arya*, thence by which the Sanskrit-speaking immigrants into India called themselves, in distinction from the aborigines of the country, whom they called *Dasyu*, *Sūdra*, etc. The ancient Persians gave themselves the same title (OPers. *Ariya*, Zend *Arya*); and it appears in the name of their country, *Aryana* or *Irān*: see *Iranic*. There are no traces of the word to be found outside of these two races. Its origin is obscure and disputed; there is no probability that it has anything to do with a root **ar*, plow.] **I. a.** Of or pertaining to the Aryans or to their speech. See **II.**

Our faith, our customs, our language, were all but fragments of the primitive *Aryan* stock common to Rome and Germany.

E. A. Freeman, *Amer. Lects.*, p. 118.

II. n. 1. A member of the eastern or Asiatic division of the Indo-European family, occupying the territories between Mesopotamia and the Bay of Bengal, in the two subdivisions of Persia, or Iran, and India. [This is the older, more scientific, and still widely current use of the word. More recent, but increasingly popular, is the second use.]

2. An Indo-European or Indo-German or Japhetite; a member of that section of the human race which includes the Hindus and Iranians (Persians) as its eastern or Asiatic division, and the Greeks, Italians, Celts, Slavonians, and Germans or Teutons as its western or European division. The languages of all these branches or groups of peoples are akin; that is to say, they are descendants of one original tongue, once spoken in a limited locality by a single community, but where or when it is impossible to say.

Many words still live in India and England that have witnessed the first separation of the northern and southern *Aryans*, and these are witnesses not to be shaken by any cross-examination. The terms for God, for house, for father, mother, son, daughter, for dog and cow, for heart and tears, for axe and tree, identical in all the Indo-European idioms, are like the watchwords of soldiers. We challenge the seeming stranger; and whether he answer with the lips of a Greek, a German, or an Indian, we recognize him as one of ourselves. There was a time when the ancestors of the Celts, the Germans, the Slavonians, the Greeks and Italians, the Persians and Hindus, were living together beneath the same roof, separate from the ancestors of the Semitic and Turanian races. Max Muller.

Aryandic (ār-yān'dik), a. Originating with *Aryandes*, Persian satrap of Egypt, condemned to death by Darius for coining silver finer than that of the great king himself.—**Aryandic coin**, a coin struck by *Aryandes*.

European artists who have not lived among the African race sometimes try their hands at a pretty negress, but they always *Aryanicize* the type.

G. Allen, *Physiol. Esthetics*, p. 241.

as¹ (az), *adv.*, *conj.*, and *pron.* [*ME. as, ase, als, also, alsa, alsua, al so, al swa*, < AS. *alswā, calswā, cal swā* (= OS. *alsō* = OFries. *as, ase, asa, als, also, alsō* = D. *als* = OHG. *alsō*, MHG. *alsō, also, G. alsō, als*), lit. 'all so,' wholly so, quite so, just so, being the demonstrative *adv. so*, qualified by the intensive *adv. all*. As a demonstrative, the word retains its full form (see *also*); as a relative or correlative, the word, through weakening of force and accent, has been reduced to *as*. *As* is thus historically so with an absorbed intensive, whose force has disappeared; and it has all the relational uses of *so*, the differences being only idiomatical. The peculiar form and uses of *as* have arisen out of the correlation *so . . . so* (AS. *swā . . . swā*, or, without separation, *swā swā*), in which both terms were orig. demonstrative. The second term passed into the relative use, and the first, remaining demonstrative, was strengthened by the *adv. all* (AS. *cal swā . . . swā*). The second term, as a relative, became weak in accent, and, after assuming the prefix *all* in conformity to the first, was gradually reduced, through *also, alse, als, ase, to as*, to which, in turn, the first term in many constructions conformed. The resulting correlations *so . . . so, so . . . as, as . . . so, as . . . as*, through involution of uses, transposition of clauses, and ellipsis of one or the other term, extending often to the whole clause, present in mod. E. a complication of constructions which cannot be fully exhibited except at great length, and in connection with the earlier uses. They are also involved with the kindred correlations *such . . . as* (*such* being historically *so*, with an absorbed relational suffix) and *same . . . as*, in which the relative *conj. as* varies with *that*, and leads to the use of *as* as a simple relative pronoun.] **I. adv.** (*demonstrative or antecedent*). The antecedent in the correlation *as . . . so*, or *as . . . as*: In that degree; to that extent; so far. The correlation *as . . . so* is obsolete; *as . . . as* is in extremely common use, being, besides *like*, the regular formula of comparison to express likeness or equality: *as black as jet, as cold as ice, as wise as Solomon*, etc.; the

verb in the relative clause, when the same as in the principal clause, being usually omitted: *as, it is as cold as ice* (sc. *is*); *come as soon as you can* (sc. *come*).

He was *as so* [var. *also, als, ax*] fresche *as* is the moneth of Mai.
Chaucer, *Gen. Prolog.* to C. T., l. 92.

Lo! which sleightes and subtiltees
In women ben! for ay as busy as bees
Ben they, vs sely men for to deceyve.
Chaucer, *Squire's Tale*, Prolog., l. 1. 4.

We [Americans] use these words [faith and hope] as if they were *as* obsolete as Selah and Amen.
Emerson, *Man the Reformer*.

The relative clause is often omitted, especially in colloquial speech, being inferred from the antecedent: *as, this will do as well* (sc. *as that*); *I would as lief walk* (sc. *as ride*).

The bad man shall attend *as* bad a master.
Fletcher, *Wife for a Month*, v. 3.

I will be temperate
In speaking, and *as* just in hearing.
Beau. and Fl., *Philaster*, iv. 3.

These scruples to many perhaps seem pretended, to others, upon *as* good grounds, may seem real.
Milton, *Eikonoklastes*, xi.

The appointment of a regular wit has long ceased to be a part of the economy of a morning paper. Editors find their own jokes, or do *as* well without them.
Lamb, *Newspapers 35 Years Ago*.

II. conj. (*conjunctive or relative adv.*). **1.** The consequent in the correlations *as . . . as, so . . . as, such . . . as, same . . . as, etc.*, expressing quantity, degree, proportion, manner, etc. The relative uses are as exhibited in **I.** (where see examples). Through ellipsis of the antecedent, it enters into many peculiar idiomatic phrases.

No, 'tis not *so* deep as a well, nor *so* wide as a church-door; but 'tis enough, 'twill serve.

Shak., *R. and J.*, iii. 1.

His resolutions were *as* fained as his vows were frustrate.
Milton, *Eikonoklastes*, xxv.

Sveift.

It is in criticism, *as* in all other Sciences and Speculations.

Addison, *Spectator*, No. 291.

In parenthetical clauses involving a concession, the relative *as* (the antecedent being omitted) may be equivalent to *though*: *as, late as it was, we set forth on our journey*.

Trite *as* the counsel was, . . . in this emergency it was to me *as* if an angel had spoken.

Lamb, *Amicus Redivivus*.

Neither the arguments nor entreaties of his friends, backed *as* they were by the avowed wishes of his sovereign, could overcome his scruples.

Prescott, *Ferd. and Isa.*, ii. 5.

In parenthetical clauses involving a contrast or negation *as* to fact with the principal clause, *as* approaches an adverbative sense, being nearly equivalent to *but*.

Had I but time, (*as* this fell sergeant, Death,
Is strict in his arrest,) O, I could tell you,—
But let it be.

Shak., *Hamlet*, v. 2.

I must confess I lov'd her; *as* who would not?

Fletcher, *Loyal Subject*, v. 7.

In subordinate clauses involving a supposition, *as* is conditional, being equivalent to *as if, as though*, which are the ordinary forms. This use is now rare or only poetical except in the independent phrase *as it were*. (See phrases below.)

It lifted up its head, and did address
Itself to motion, like *as* it would speak.

Shak., *Hamlet*, i. 2.

And all at once their breath drew in,
As they were drinking all.

Coleridge, *Ancient Mariner*, l. 165.

The young lambs bound
As to the tabor's sound.

Wordsworth, *Intimations of Immortality*.

The clause introduced by *as* may be reduced by ellipsis of its verb and other elements to one or two important words, leaving *as* as a quasi-connective: (a) Between an adverb or adverbial phrase in the principal clause and an adverb or adverbial phrase constituting the subordinate clause.

It suffices me to say . . . that men here, *as* elsewhere, are indisposed to innovation.
Emerson, *Lit. Ethics*.

(b) Between the principal verb or its subject and the subordinate subject or object, which becomes equivalent to a predicate appositive or factitive object after the principal

verb, *as* meaning 'after the manner of,' 'the same as,' 'like,' 'in the character of or capacity of,' etc.: *as*, the audience rose as one man; all these things were *as* nothing to him; he has been nominated *as* a candidate. Hence in constructions where the appositive clause depends directly upon the noun: *as*, his career *as* a soldier was brilliant; his reputation *as* a scholar stands high; and so in naming phrases of a general subject: *as*, Washington *as* a general; man *as* a thinker. The construction as a quasi-predicate appositive or factitive object after a principal verb is usual after verbs of seeming or regarding.

Evil was embrac'd for good, wickedness honour'd and esteem'd *as* virtue.
Milton, *Hist. Eng.*, iii.

That law which concerneth men *as* men.
Hooker, *Eccles.* 101.

This gentleman was known to his contemporaries *as* a man of fortune, and *as* the author of two successful plays.
Macaulay.

Our age is bewailed *as* the age of Introversion.
Emerson, *Amer. Scholar*.

The subordinate clause introduced by *as* is often not dependent grammatically upon the principal verb, but serves to restrict or determine the scope of the statement as a whole. Such clauses are parenthetical, and usually elliptical, some of them, *as as usual* and *as a rule*, having almost the idiomatic unity of an adverbial phrase.

The streets were narrow, *as* is usual in Moorish and Arab cities.
Irving, *Granada*, p. 2.

In certain emphatic formulas, *as* ('even as') introduces a solemn attestation ('as truly or surely as') or adjuration ('in a manner befitting the fact that'), approaching a causal sense, 'since, because.' (See 2, below.)

But truly *as* the Lord liveth, and *as* thy soul liveth, there is but a step between me and death.
I Sam. xx. 3.

Now, *as* you are a Roman, tell me true.
Shak., *J. C.*, iv. 3.

To punish baseness, shew it!

4. Of purpose or result: The consequent in the correlations *so . . . as*, *such . . . as*: To such a degree that; in such a manner that; followed by an infinitive or, formerly, by a finite verb (but in the latter construction *that* has taken the place of *as*).

Winter birds, *as* woodcocks and fieldfares.
Bacon.

A simple idea is one idea; *as* sweet, bitter.
Locke.

6. In dependent clauses: That. Formerly *as* was often attached, like *that*, to the adverbs *there*, *then*, *where*, *when*, etc., to make them distinctly relative. These forms are now obsolete, except *whereas*, which remains in a dialectal sense. See *whereas*. From this interchange with *that* followed the use of *as* for *that*, in introducing an object clause after *say*, *know*, *think*, etc., varying with *as that* and *as how*: only in dialectal use: *as*, I don't know *as* I do, and I don't know *as* I do, the sense varying with the accent. [Colloq., New Eng.]

"Dumnow'z I know:" the nearest your true Yankee ever comes to acknowledging ignorance.

Which I have open'd to his grace at large,
As touching France.

asceticism (a-set'i-sizm), *n.* [*< ascetic + -ism.*]

1. The life or practice of an ascetic; the principles and historic course of the ascetics. In ancient Greece *asceticism* (ἀσκησις) meant the discipline undergone by athletes while training. In the schools of the Stoics the same word was applied to the controlling of the appetites and passions and the practice of virtue. Among Christians, through contact with the Alexandrian school of philosophy, the word early came into use with a similar meaning, namely, the habitual use of self-discipline, such as had been practised by individuals and even by communities among the Jews. The object of this discipline was to control and subdue the bodily nature with its passions and desires as the stronghold of evil inherent in man since the fall of Adam, the means used being fasting, celibacy, poverty, penance, and solitude, a mode of life which developed in the course of a few centuries into monasticism. Similar and even greater austerities have been practised from very early times by many among various pagan nations and in connection with various religious systems, such as Hinduism, Buddhism, etc., under the influence of the idea that matter is essentially evil, and that an approach to ideal good or an escape from the evils of existence can be effected only by subduing or torturing the body.

Asceticism again—inclining under this term . . . all efforts to withdraw from the world in order to cultivate a higher degree of sanctity—belongs naturally to a society which is somewhat rude, and in which isolation is frequent and easy. *Locky, Europ. Morals, 1, 136.*

2. In *theol.*, the theory or systematic exposition of the means, whether negative, as self-denial and abstinence, or positive, as the exercise of natural and Christian virtues, by which a complete conformity with the divine will may be attained. See *ascetical theology*, under *ascetical*. = *Syn. Self-sacrifice, Austerity, etc. See self-denial.*

Ascidia (a-sid'i-ä), *n. pl.* [NL., pl. of *Ascidium*, q. v.] 1. A class of animals connecting the molluscid invertebrates with the *Vertebrata*; the tunicates, tunicaries, or sea-squirts, otherwise called *Tunicata*, *Ascozoa*, *Urochorda*, or *Protovertebrata* (in part); the ascidians. They are asymmetrical marine animals, simple or compound, fixed or free, with a monogastric nervous system, tubular heart, and no foot. The integument is a leathery sac, with two orifices, oral and anal. The young are free-swimming and tadpole-like, and in this larval condition show traces of vertebrate affinities in the possession of a notochord, or notochord of the tail, a condition retained permanently in one family, the *Appendiculariidae*. They are found at low-water mark on the sea-bench, and, attached to stones, shells, and fixed objects, are dredged from deep water. An ascidian presents externally the appearance of a winejar or double-necked bottle, the one aperture of the bottle corresponding to the mouth and the other to the vent or excretory aperture. A feature in the organization of these animals is that a large proportion of the tough outer case or test is composed of cellulose, a starchy substance highly characteristic of plants. The mouth-opening leads into a large branchial sac or breathing-sac; and from the bottom of this sac the digestive system, consisting of stomach and intestine, is continued, the intestine opening into a second sac, the atrial chamber. This latter cavity opens externally by the second aperture of the body, and also emits the effete water which

This latter cavity opens externally by the second aperture of the body, and also emits the effete water which

has been used in breathing. A single nervous mass or ganglion represents the nervous system, this mass being placed between the two apertures of the body. Male and female reproductive organs exist in each ascidian. These animals may be *single*, *social*, or *compound*. In social ascidians the peduncles of a number of individuals are united into a common tubular stem, with a partial common circulation of blood. The species are more or less gelatinous, and some are used as food in China and on the shores of the Mediterranean. The *Ascidia* are divisible into two orders not well defined, called *Biphora* and *Ascidioidea*, and by other names, one containing the *Salpidae* and *Doliolidae*, the other the rest of the class. Also written *Ascidia*. See cuts under *Appendicularia*, *Doliolidae*, *Salpa*, and *Tunicata*.

1. In bot.: (a) The popular name of trees belonging to the genus *Fraxinus* (which see). The common ash of Europe, *F. excelsior*, is native through the greater part of Europe, northern Africa, and some parts of Asia. It is a handsome ornamental tree, and is exceedingly valuable for its timber, which is close-grained and remarkably tough and elastic. It was therefore in early times the chief material in the construction of bows and spears, and is now largely used wherever these qualities are needed. In its younger state the tree is called ground-ash, and a variety is well known in cultivation as weeping-ash. The flowering ash, *F. ornus*, is a small tree of southern Europe, sometimes cultivated for ornament. It yields a saccharine exudation, which forms the best known and most important of the various kinds of manna. In the United States several species of the genus are commonly known under the name, as the black ash, ground-ash, or hoop-ash, *F. sambucifolia*; the blue ash, *F. quadrangulata*; the green ash, *F. viridis*; the red ash, *F. pubescens*; the water-ash, *F. platycarpa*; and the white ash, *F. americana*. The last is the most valuable; its wood closely resembles that of the European ash, and is used for similar purposes. (b) The name (with some adjunct) of various trees or shrubs of other genera, generally from some resemblance in foliage or qualities of the wood to the common ash. (See below.) (c) Also, in parts of England, the name of some herbaceous plants, chiefly umbelliferous, as the ground-ash, or ashweed, *Egopodium Podagraria* and *Anglica sylvestris*, and the sweet ash, *Anthriscus sylvestris*.—2. 7. To invite: as, to *ask* guests to a wedding or entertainment.—To *ask* in church, to publish banns of marriage. [The verb *ask* is used in this phrase because the publication is really an inquiry whether any one can state any valid objection to the marriage.] = **Syn.** **1** to **4.** *Ask*, *Request*, *beg*, *Demand*, *Claim*, *Require*, *Solicit*, *Beseech*, *Entreat*, *Crave*, *Supplicate*, *Implore*, *Importune*. *Ask* is the generic word in this list; it implies neither that what is asked must be rendered, nor, on the other hand, that it would be a favor. *Demand*, *claim*, and *require* ask imperatively or authoritatively; the others call for a favor with different degrees of urgency or humility. *Beseech*, *solicit*, *entreat*, *importune*, and sometimes *beg*, imply great urgency; *crave*, *supplicate*, and *implore* imply great urgency and great dependence or humility. *Request* is a little more formal or carefully civil than *ask*; as, your attendance is *requested*. *Beg* is primarily to ask as a beggar; sometimes, by the hyperbole of social usage, to ask as a favor, real or professed; as, *I beg* your pardon. *Demand* and *claim* more often refer to things; *require* applies more often to action; as, he *demand*ed his share; he *claim*ed the whole; he *requir*ed me to come; he *requir*ed some proof to back my demand and substantiate my claim. *Solicit* is urgent, but less so than the words that follow it; as, he *solicit*ed my vote. *Beseech* is most applicable to the act of asking on the ground of pure favor. *Entreat* implies continued appeal or representations of a moving kind. *Crave* is almost or quite abject; like *beg*, it has been taken into polite forms of speech, and in that use robbed of most of its force. *Supplicate* and *implore* are, figuratively, modes of prayer, as to a superior being; they imply urgent or desperate appeal, perhaps in many words. To *importune* is generally to beg in a persistent, wearying way, with urgency, but perhaps without especial dependence or humility.

To *ask* and have, command and be obeyed.
Marlowe, *Tamburlaine*, l. iv. 3.

To-night we hold a solemn supper, sir,

With slight denial.
Shak., T. of A., ii. 1.

5 and 6. *Ask, Inquire, Question, Interrogate.* *Ask* is here
also the generic word; it is simple and informal. *Inquire*
may be used in the endeavor to be civil, or it may express
a more minute examination into facts: as, to *inquire* (into,
as to) the causes of discontent. To *question* in this sense
implies the asking of a series of questions, it being sup-
posed that the truth is hard to get at, through ignorance,
reluctance, etc., in the person questioned. *Interrogate* is
essentially the same as *question*, but more formal: as, to
question a child or servant about his conduct; to *interro-
gate* a witness, an applicant for office, etc. *Questioning*
or *interrogation* might be resented where *asking, asking*
a question, or *inquiring* would meet with a friendly re-
sponse.

If we encountered a man of rare intellect, we should
ask him what books he read.

= *Syn. 2. Asperse, Defame, Calumniate, Slander, Malign, Traduce, Libel, Vilify, decry, depreciate, disparage, slur, run down, lampoon, blacken.* These words are all descriptive of attempts to injure reputation by false statements. They all apply primarily and chiefly to persons. There is often little or no difference between them. *Asperse* is, literally, to bespatter, as with mud or dirt; it sometimes implies injury to reputation by indirect insinuation. *Defame* is, literally, to lower the fame or repute of, to bring toward infamy, to make charges that are more open and weighty than aspersions. *Calumniate*, *slander*, and *malign* represent the most deliberate and deadly assaults upon reputation. The *calumniator* is most often the inventor of the falsehoods he circulates. The *slanderer* is less inventive and more secret, his work being generally behind the back of the injured person. The *maligner* is most mischievous, malicious, or *malign* in his motives.

To *traduce* is to misrepresent, to show in an odious light.

Libel and *slander* are the words most used in speaking of injury to reputation in its relation to the possible recovery of damages at law. To *libel*, therefore, often suggests the pecuniary loss by defamation; *libel* is strictly effected by publication, while *slander* is strictly by word of mouth. *Vilify* is, literally, to make one (seem) vile; it suggests a defamation of the coarser and more abusive sort. See *decry*.

They are not such as you. *Shak., Cor., i. 1.*

asphaltum (as-fal'tum), *n.* [NL.: **see asphalt.**] One of the so-called bituminous substances which are widely diffused over the earth, and are of great practical importance. See *bitumen* and *bituminous*. The asphaltums of various localities differ from each other considerably in chemical composition, as is proved by their different chemical reactions. They all agree, however, in being amorphous, in having the luster and general appearance of pitch (whence the name of *mineral pitch*, often applied to them), in melting at about the temperature of boiling water, and in taking fire when heated and burning with a bright but smoky flame. They differ essentially from coal in being more or less soluble in various reagents, such as oil of turpentine, ether, and alcohol. Asphaltum seems, in most cases at least, to have resulted from the hardening of the more liquid forms of bituminous substances, namely, maltha and petroleum, which have oozed out upon the surface and become inspissated by oxygenation or evaporation of their more volatile portions, or by both causes combined. The most interesting locality of asphaltum is the so-called "pitch-lake" in the island of Trinidad, about a mile and a half in circumference, and filled with asphaltum, which near the shore is quite solid, but nearer the center, in places, is soft and bubbling. Most of what is called asphaltum consists of this material more or less mixed with sand or other mineral substances. Asphaltum is extensively used in a variety of ways, and especially for pavements, foot-walks, and roofing. For this purpose the material is prepared by mixing it while hot with sand or fine gravel, or by causing it to be absorbed by paper. Certain kinds of asphaltic rock, or asphalt (F. *asphalte*), as they are frequently called, are peculiarly adapted for pavements or other special purposes. The localities of Seyssel in France and Val de Travers in Switzerland are the most important of this kind. At each of these the *asphalte* consists of limestone impregnated with bituminous material to the amount of from 4 to 16 per cent. This rock, especially that from Val de Travers, has the remarkable property of forming, without any admixture, an extraordinarily durable and elastic road-way, and is, although expensive, extensively used for that purpose in Paris and other large cities of Europe. The rock has only to be heated, when it crumbles to powder, in which condition it is compressed in molds into blocks, or simply spread over the surface required to be covered, and packed or pressed by pestle or roller, when, after cooling, it assumes a condition closely resembling that of the original rock. See *maltha, naphtha, and petroleum*. Also *asphalt*.

The asphodel of the earlier English and French poets is the daffodil, *Narcissus pseudo-narcissus*. In Gr. myth. the asphodel was the peculiar plant of the dead, its pale blossoms covering the meadows of Hades. It received this attribution, perhaps, because in Greek lands it is a very common weed, plentiful in barren and desert places and about tombs.

A colony migrated from Persia to Syria, settled in various places, with their chief seat on the mountains of Lebanon, and became remarkable for their secret murders in blind obedience to the will of their chief. Their religion was a compound of Magianism, Judaism, Christianity, and Mohammedanism. One article of their creed was that the Holy Spirit resided in their chief and that his orders proceeded from God himself. The chief of the sect is best known by the denomination *old man of the mountain* (Arabic *sheikh al-jabal*, chief of the mountains). These barbarous chieftains and their followers spread terror among nations far and near for almost two centuries. In the time of the crusades they mustered to the number of 50,000, and presented a formidable obstacle to the arms of the Christians. They were eventually subdued by the sultan Bibars about 1272.

The law was first made against those employing infidels to murder Christians, but almost immediately and a fortiori extended to Christians as against any person, whether Christian or not, who was allowed to live in the state. The other is called the dry process, and is performed by the agency of fire. The first is generally employed for the purpose of estimating the quantity of gold or silver in an alloy, and the second is chiefly applied to ores. Royal assent, in England, the approbation given by the sovereign in Parliament to a bill which has passed both houses, after which it becomes law. This assent may be given in two ways: (a) In person, when the sovereign comes to the House of Peers, the Commons are sent for, and the titles of all the bills which have passed are read. The royal assent is declared in Norman-French by the clerk of the Parliament. (b) By letters patent under the great seal, signed by the sovereign, and notified in his or her absence. A money-bill, or bill of supply, passed by the House of Commons, is presented by the Speaker for the royal assent.—**Syn.** *Assent, Consent, Concurrence, Acquiescence, acceptance, adherence.* Assent is primarily an act of the understanding; consent is distinctly the act of the will: as, I assent to that proposition; I consent to his going. Baxter speaks of justifying faith as the assenting trust of the understanding, and the consenting trust of the will. Assent is not yet altogether excluded from the field of the will, but tends to express a feebler action of the will than it formerly did, or than consent does. Compare *Luke* xxiii. 24 (margin), "Pilate assented that it should be as they required," with the formal consent in the royal assent to a

bill. Concurrence is a running of minds in the same channel, an agreement in opinion or decision. Acquiescence is a state or act of quiet submission to a decision, an act, or the prevalence of an opinion, because it is near enough to one's wishes, or not worth resisting, or impossible to resist, but not because it is entirely acceptable.

Assent I have described to be a mental assertion; in its very nature then it is of the mind, and not of the lips.

If any faction of men will require the assent and consent of other men to a vast number of disputable and uninducted things, and it may be, a mathematical falsehood among the first of them, and utterly renounce all Christian communion with all that shall not give that assent and consent, we look upon those to be separatists; we dare not to be so narrow-spirited.

3. Assert, Affirm, Declare, Aver, Asseverate (see *declare*), allege, protest, avow, lay down. (See *protest*.) *Assert* seems to expect doubt or contradiction of what one says. *Affirm* strengthens a statement by resting it upon one's reputation for knowledge or veracity; as, "she [Rhoda] constantly affirmed that it was even so," *Acts* xii. 15. *Declare* makes public, clear, or emphatic, especially against contradiction. *Aver* is positive and peremptory. *Asseverate* is positive and solemn.

This change usually results from a tendency to accommodate the mute to an immediately succeeding *e, i, or y* sound. Thus, *t* in the Latin *natio* becomes *z (= ts)* in the Italian *nazione*, and is pronounced *s* in the French *nation* and *sh* in the English *nation*. Similarly, the English *t* approaches or assumes the sound of *ch* before the *y*-sound contained in long *u* in *nature, virtue*, etc.

Diligence* in labor often conveys the idea of quickness. *Industry* keeps at work, leaving no time idle. *Assiduity* (literally, a sitting down to work) sticks quietly to a particular task, with the determination to succeed in spite of its difficulty, or to get it done in spite of its length. *Application*, literally, heids itself to its work, and is, more specifically than *assiduity*, a steady concentration of one's powers of body and mind; as, he was a man of extraordinary powers of application; Newton attributed all his own success to application. *Diligence* is, literally, fondness for one's work, and so, by a natural transfer, industry that is alert. *Constancy* is the power to continue unchanged, as in affection, or to hold on in any particular course or work; it goes more deeply into character than the others. *Perseverance* suggests obstacles from without or within which are steadily met, and is morally neutral. *Persistence* may be good, but it is more often an evil perseverance, as obstinacy or a determination to carry one's point against unwillingness or refusal on the part of others. We speak of plodding in-

dustry, patient assiduity, steady application, great diligence, unshaken constancy, undaunted perseverance, persistence that will not take No for an answer.

=**SYN.** 1 and 2. *Associate, Friend, Companion, Comrade, Fellow, Partner, Ally, Colleague, Coadjutor, Confederate.* *Associate* is the most general word for persons who are connected in life, work, etc.; it is special only in suggesting an alliance of some permanence. *Friend* is the most general word for persons who, through community of life or otherwise, have kind feelings toward each other. *Companion*, literally a messmate, applies where the persons are much thrown together, but are not united by any strong tie; hence it is not a good synonym for *husband* or *wife*. "Many men may be admitted as *companions* who would not be altogether fit as *associates*," *Crabb*, Eng. Synonyms,

p. 197. *Comrade* denotes a close companion; it implies freedom of intercourse and a good degree of friendship; as, *comrades* in arms. *Fellow* has nearly lost its early signification of agreeable companionship, the later meanings having overshadowed it: as, "a better *fellow* schuld men might fynde," *Chaucer*. Compare *fellow-feeling*, *fellow-helper*, *fellowship*. *Fellow* in this connection may mean one who naturally would be or is a companion: as, why do you not go with your *fellows*? A *partner* is one who takes part with others, especially in business or in any kind of joint ownership. Formerly *ally* was nearly equivalent in meaning to *associate*, but it is now applied chiefly to states or rulers in their public capacity: as, the *allies* in the Crimean war. A *colleague* is an associate for some specific purpose or in some office; it is, like *coadjutor*, properly applicable only to one engaged in labor or business regarded as especially dignified: as, Senators A and B were *colleagues*; Luther and his *coadjutors*. A *confederate* is one somewhat formally associated with others, now usually, when applied to private relations, for a bad object. See *accomplice*.

See *article*.—**Association of ideas** (an expression invented by Locke), or **mental association**, in *psychol.*, the tendency of a sensation, perception, feeling, volition, or thought to recall to consciousness others which have previously co-existed in consciousness with it or with states similar to it. Thus the name of a friend is associated with his personal appearance, age, place of residence, and so on; and the sound of the name brings into consciousness involuntarily one or more of these associated ideas. The special laws of association, though variously stated by psychologists, are usually admitted to be those of contiguity and similarity; that is, ideas recall ideas which have occurred along with them, and also those which are similar to them. These are called the principles of objective and subjective association. The doctrine of association has played an important part in the history of modern English psychology and philosophy.

The phrase, *intrinsic and extrinsic association*, might be introduced very appropriately to distinguish associations founded on intrinsic resemblances of mental states from those which merely imply the extrinsic accident of simultaneous occurrence in consciousness. T. Clarke Murray.

Assyrian (a-sir'i-an), a. and n. [< L. *Assyrius*,
< Gr. *Assyriotes*, pertaining to *Assyria*, Assyria.]

1. a. Pertaining or relating to Assyria or to its
inhabitants.—Assyrian architecture, the most im-
portant branch of the architecture of Mesopotamia,
developed in Assyria during the period of its supremacy.
Its chief monuments were the royal palaces, which were
of enormous extent, and constructed of massive walls of sun-
dried brick on great mounds of clay, of which they have now
virtually become a part, owing to the disintegrating influ-
ence of time and the elements upon their friable materi-
als. They were never more than one or two stories high,
owing to the limited endurance of the unbaked bricks, and
consisted chiefly of corridors and long, narrow halls, either
arched over with brick or closed in with ceilings of wood,
and surrounding open courts. The entrances were of im-
posing height and width, ornamented with colossal stone
figures of winged human-headed bulls or lions, or other
mythological conceptions. The interior walls were com-
monly lined with a revetment of soft alabaster slabs, on
which were carved in low relief the remarkable series of
sculptures which have preserved the record of Assyrian
triumphs, character, and customs. Color in somewhat
subdued tints was generally employed upon the sculptures
and the wall-spaces. The temple, in Assyria, was subor-
dinate to the palace, the opposite being the case in Baby-
lonia.—Assyrian art, one of the later branches of Mesop-
otamian art, parallel to the later Babylonian. Its most
characteristic manifestation is presented in its lavish
sculptured architectural decoration in low relief. In its

first period, culminating in the ninth century B. C., it dis-
played great vigor and truth in its interpretation of nature,
particularly in its portrayal of animal forms. Later it suf-
fered a decline until the close of Assyrian supremacy, tow-
ard the end of the seventh century B. C. Its human
figures never have the life and force of its animals, but are

heavy and conventional. It is marked by great minuteness

craftsmen took a high place, and they excelled also in
gem-engraving.

Charlotte Brontë, *Shirley*, xx.

=Syn. *Sagacious*, *Sage*, *Knowing*, *Astute*, *Subtle*. *Sagacious* and *sage* are used only in good senses, and when applied to persons generally suggest the wisdom of age or experience. The *knowing* man has wide knowledge and often penetration. The word *knowing* has also a humorous cast: as, he gave me a *knowing* wink; it may be used ironically: as, he is a little too *knowing*; that is, he thinks he knows more than he does; it may be used of knowing more than one has a right to know; it sometimes suggests a disposition to make ill use of knowledge: as, a *knowing* leer. *Astute* is often the same as *sagacious*, but is susceptible of an unfavorable sense in the direction of a narrow shrewdness, slyness, or cunning; it often means a *sagacity* that knows how to be silent; it is frequently applied to looks. *Subtle*, in its good sense, implies great acuteness, delicacy, or refinement in mental action: as, a *subtle* reasoner. For its bad sense, see *cunning*.

Another effect of public instability is the unreasonable advantage it gives to the *sagacious*, the enterprising, and the moused few, over the industrious and uninformed mass of the people.

This prep. is most nearly equiv. to *to*, without the orig. implication of motion. In many constructions the two prepositions interchange. In many E. dialects *at* has partly, and in Scand. has wholly, displaced *to*, while on the other hand in G. *to* (*zu*) has wholly displaced *at*. In L. and Rom. the form cognate with *at* covers all the uses of *to* as well as of *at*, and extends partly over the field of *with*. A preposition of extremely various use, primarily meaning *to*, without implication, in itself, of motion. It expresses position attained by motion to, and hence contact, contiguity, or coincidence, actual or approximate, in space or time. Being less restricted as to relative position than other prepositions, it may in different constructions assume their office, and so become equivalent, according to the context, to *in*, *on*, *near*, *by*, *about*, *under*, *over*, *through*, *from*, *to*, *toward*, etc.]

The place implied by *at* may be left indeterminate, with a reference rather to condition than to mere location: *as*, *at* school, *at* college, *at* court, *at* sea, etc. *At* may also express personal proximity: *as*, *at* one's side, *at* one's heels, *at* one's elbow, etc. *At hand*, *near by*, has lost its personal reference.

-ate¹. [ME. reg. *-at*, **<** OF. *-at*, a later "learned" form of vernacular *-e* (*-é*), fem. *-ee* (*-ée*), = Sp. Pg. *-ado*, fem. *-ada*, = It. *-ato*, fem. *-ata*, **<** L. *-ātus*, fem. *-āta*, neut. *-ātum* (*-āto-*), pp. and adj. suffix, being *-tu-s* (= Gr. *-το-ς* = E. *-d*, *-ed*), added to stem of verbs in *-ā-re* (It. *-are*, Sp. Pg. *-ar*, *F. -er*). This suffix also appears as *-adē*, *-ado*, *-ata*, *-ce*, *-y*, etc. Latin adjectives and participles in *-ātus* were usable as nouns, in case of persons, as *legātus*, one deputed, a legate, ML. *prēlātus*, one preferred, a prelate, etc., in neut. of things, as *mandātum*, a thing commanded, a mandate, etc. See *-ate*² and *-ate*³.] A suffix of Latin origin: (a) In adjectives, where *-ate* is equivalent to and cognate with English *-ed*, *-d*, *-d*, in perfect participles and participial adjectives, the native English suffix being often added to *-ate* when a verb in *-ate*² exists, as in *desolate* or *desolat-ed*, *accumulate* or *accumulat-ed*, *situate* or *situat-ed*, etc. In many instances the adjective is not accompanied by a verb in *-ate*, as *innate*, *ornate*, *temperate*, etc.; this is especially true of botanical descriptives, as *acuminate*, *crenate*, *cuspidate*, *hastate*, *lanceolate*, *seriate*, etc. (b) In nouns, of persons, as *legate*, *delegate*, *reprobate*, etc., or of things, as *mandate*, *precipitate*, etc.; especially, in *chem.*, in nouns denoting a salt formed by the action of an acid on a base, as in *acetate*, *nitrate*, *sulphate*, etc., the suffix being added to the stem (often shortened) of the name of the acid.

[The corresponding New Latin forms are *acetatum*, *nitratum*, *sulphatum*, etc., but often erroneously *acetas*, *nitras*, *sulphas*, genitive *acetasis*, etc., by confusion with *-ate*⁴.]

-ate². [L. *-ātus*, *-āta*, *-ātum*, pp. suffix of verbs in *-ā-re* (see *-ate*¹), with supine in *-ātum* (stem *-ātu-*), to which, instead of the pp. stem, such verbs are often referred. In this dictionary E. verbs in *-ate* (and so verbs in *-ete*, *-ite*) are reg. referred to the L. pp. *-ātus* (*-etus*, *-itus*), intimating that such verbs are taken from or formed according to the L. pp. stem, though with the force of the inf. From L. participles in *-tus* (*-ātus*, of the 1st conjugation, *-tus*,

-i-tus, of the 2d, *-tus*, *-sus*, of the 3d, *-tus*, of the 4th), and from thence-formed frequentatives, which became very numerous in LL. and ML., arose many verbs in OF. and ME., based, or appar. based, on L. participles, coinciding thus with adjectives and nouns from such participles. These, with verbs of other origin agreeing in form with adjectives, have made it a rule in E. that any adj. may be made a verb; hence adjectives in *-ate*¹ are usually accompanied by a verb in *-ate*², and new verbs from L. verbs of the 1st conjugation are reg. formed in *-ate*, whether a corresponding adj. exists or not; and *-ate*², as a recognized verb-formative, may be suffixed to other stems of any origin, as in *felicitate*, *capacitate*, *substantiate*, *assassinate*, *camphorate*, etc., based on *felicitas*, *capacitas*, *substantia*, *camphora*, etc., of Latin origin, *assassin*, *camphor*, etc., of other origin. Owing to the preponderance of verbs in *-ate* over adjectives in *-ate*, such verbs are in this dictionary placed before the adjectives, even when the adjectives are of earlier date.] A suffix of Latin origin, a common formative in verbs taken from the Latin, as in *accumulate*, *imitate*, *militate*, etc., or formed in English, either on Latin stems, as in *felicitate*, *capacitate*, etc., or on stems of other origin. See etymology.

-ate³. [**<** ME. *-at*, **<** OF. *-at*, a later "learned" form of vernacular *-e* (*-é*) (as in *duché*, E. *duch-y*, *q. v.*), = Sp. Pg. *-ado* = It. *-ato*, **<** L. *-ātus* (stem *-ātu-*), forming nouns of the 4th declension from nouns, but formed as if from verbs in *-ā-re*, with suffix *-tu-*, parallel with *-to-*, suffix of pp. (hence the similarity to pp. *-ātus*, E. *-ate*¹, *q. v.*), as in *consulātus*, *magistrātus*, *pontificātus*, *senātus*, LL. *episcopātus*, etc., with senses as in corresponding E. words.] A suffix of Latin origin, denoting office, an office, a body of officers, as in *consulate*, *pontificate*, *decemvirate*, *senate* (Latin *senātus*, from *senex*, an old man), *episcopate*, etc., and sometimes a single officer, as *magistrate* (Latin *magistrātus*, properly magistracy, also a magistrate), the suffix in the last usage being equivalent to *-ate*¹ in *legate*, etc., and to *-ate*⁴ in *primate*, etc.

-ate⁴. [**<** L. *-as* (*-at-*), as in *magus* (gen. *magū-tis*) (parallel to *maguatus*), *primas* (prop. adj.), etc.] A suffix of Latin origin, practically equivalent to *-ate*¹ in nouns, and *-ate*³ (in *magistrate*), as in *maguate*, *primate*, and (in Latin plural) *penates*, *optimates*.

son, *venison*, which have differentiated doublets in *orution*, *venation* (obs.)] A suffix of Latin origin, occurring in nouns of action, etc. These nouns are properly abstract nouns equivalent to English nouns in *-ing*, and are (a) taken directly from the Latin, as *citation*, *commendation*, *creation*, *education*, *liberation*, etc., and formed in Latin (*commendatio*, etc.) from the verbs represented in English either by forms without suffix (from the Latin infinitive), as *cite*, *commend*, etc., or by forms in *-ate* (from the Latin perfect participle), as *create*, *educate*, *liberate*; or (b) formed in modern speech, whether from verbs without suffix, as in *fixation*, *quotation*, etc., from *fix*, *quote*, etc., or from verbs in *-ate*, as *concentration*, *desiccation*, from *concentrate*, *desiccate*, etc., or from verbs of non-Latin origin, as *starvation*, *flirtation*, these being the earliest formations (in the middle of the eighteenth century) in *-ation* from verbs of native origin (*starve*, *flirt*). Some words in *-ation* have no accompanying verb in English, as *constellation*, *lunation*, *negation*, etc.

It is also found in a few other nouns, as in *prerogative*, *donative*. It is added rarely to verbs of non-Latin origin, as in *talkative*, *babblative*, and used in colloquial or slang expressions like *go-ahead-ative*. English formations in *-ative*, from verbs in *-ate²*, retain the accent of the verb, as *decorative*.

It consists of a thin hollow ball of porous earthenware, to which is joined a graduated glass tube. The ball and the tube are filled with water, the top of the tube is closed, and the instrument is exposed to the free action of the air. As the water transudes through the porous substance, and is removed in the form of vapor by the air, the extent of evaporation is shown by the sinking of the water in the graduated tube.

atmosphere (at'mōs-fēr), *n.* [= F. *atmosphère* = Pg. *atmosfera* = Sp. *atmósfera* = It. *atmosfera* = Sw. *atmosfer* = Dan. *atmosfære* = G. *atmosphäre*, < NL. *atmosphara*, < Gr. ἀτμός, vapor, + σφαῖρα, sphere: see *sphere*.] **1.** The aëriiform fluid which surrounds the earth, and extends to an undetermined height above its surface; the air. It is a mechanical mixture of 79 parts by volume of nitrogen and 21 of oxygen, with nearly one per cent. of argon, a trace of carbon dioxide, and a variable quantity of aqueous vapor, ammonia, ozone, and organic matter. The composition of the normal atmosphere varies but slightly in different localities, although near towns it usually contains impurities, such as sulphuric acid, hydrochloric acid, etc. The movements of the atmosphere constitute the winds, and in it are formed or produced clouds, rain, and snow. Its density is greatest at the earth's surface, and decreases as the height above the earth increases. The atmosphere, like other bodies, gravitates toward the earth, and therefore has weight and exerts pressure. Its average weight at the level of the sea is about 15 pounds (14.7) to the square inch.

2. A conventional unit of atmospheric pressure. An atmosphere is in English use the pressure of a vertical column of 30 inches of mercury at the freezing-point at London; in French use it is the pressure of 760 millimeters of mercury at the freezing-point at Paris. For the absolute atmosphere in the C. G. S. (centimeter-gram-second) system, see *absolute*. The weight of the atmosphere to the square inch is commonly employed as a convenient unit for pressures arising from other causes, such as the weight of liquids, the force of steam, etc.: thus, a pressure in a steam-boiler of 3 atmospheres means a pressure equal to 45 pounds per square inch.

The apparatus . . . was of great simplicity, all of glass, capable of resisting the pressure of many atmospheres. *Science*, VIII. 56.

3. The gaseous envelop surrounding any of the heavenly bodies.

No sound, either loud or soft, could be heard by any inhabitant of the moon, because the moon practically has no atmosphere. *J. N. Lockyer*, *Spect. Anal.*, p. 22.

4. Any gaseous medium.

For an atmosphere of any gas at uniform temperature, the height at which the density would be halved is the height of the homogeneous atmosphere for that gas, multiplied by .69315: the gas is assumed to obey Boyle's law. *J. D. Everett*, *Units and Phys. Const.*, p. 41.

5†. An assumed outer envelop of force, effluvia, etc., surrounding a body: as, an electrical atmosphere.—**6.** Figuratively, intellectual or moral environment; pervading influence.

By the hearth the children sit
Cold in that atmosphere of Death.

Tennyson, *In Memoriam*, xx.

up-stroke, the down-stroke being effected by the pressure of the atmosphere caused by the formation of a vacuum under the piston through the condensation of the steam. This engine, invented by Papin in 1695, was first made a practical success by Newcomen, and was subsequently greatly improved by Watt, through the addition of a separate condenser and air-pump.—**Atmospheric governor**, an apparatus for controlling the movements of machinery by the use of air under pressure.—**Atmospheric hammer.** (a) A hammer driven by means of compressed air, as the steam-hammer is operated by steam. See *steam-hammer*. (b) A hammer in which an atmospheric spring is employed. The hammer-head is con-

nected by a rod with a piston working in a cylinder to which air is admitted at the center of its length. A reciprocating motion is given to the cylinder, and by means of the air confined between its other end and the piston a corresponding motion is given to the piston-head connected with it.—**Atmospheric line.** (a) In a diagram of steam-pressure, a line drawn by the pencil when the steam is shut off from the piston of the indicator, and thus under the pressure of the atmosphere alone. The height of the steam-line above this shows the pressure of the steam, and the depth of the vacuum-line below shows the degree of condensation which is then taking place in the engine. (b) *pl.* Dark lines in the solar spectrum produced by the absorption of part of the solar radiation by the terrestrial atmosphere. See *spectrum*.

In addition to the lines of Fraunhofer, indubitably belonging to the sun, there are many other dark lines in the solar spectrum which originate from the absorptive action of the terrestrial atmosphere, and are therefore called *atmospheric lines*. *Lommel*, *Light* (trans.), p. 166.

Atmospheric pressure. See *atmosphere*, 2.—**Atmospheric pump**, a pump in which the water is forced into the suction-pipe by atmospheric pressure.—**Atmospheric railway**, a railway so constructed that the motive power is derived from the pressure of the atmosphere acting on a piston working in a continuous iron tube of uniform bore laid from one place to another, the pressure being created by exhausting the air from that end of the tube toward which it is desired that the piston should advance, or by forcing in air behind it, or by both methods at once. The system has not been found suitable for the ordinary purposes of a railway, though it is successfully worked for the conveyance of letters, telegrams, and light packages. See *pneumatic despatch*, under *pneumatic*.—**Atmospheric spring**, a spring formed by the elasticity of a confined body of air.—**Atmospheric stamp**, a stamp operated in the same manner as an atmospheric hammer (which see, above).—**Atmospheric tides**, diurnal oscillations of the atmosphere, produced by the attractions of the sun and moon, like the tides of the ocean, and indicated by minute variations of pressure on the barometer.

The siphon-like tube which conveys air from the outer ear-passage to the hollow of the mandible may ossify, . . . resulting in a neat tubular "air-bone" or *atmoteon*. *Coues*, *Key to N. A. Birds*, p. 163.

Such islands are very common in the Pacific ocean. They often present an exceedingly picturesque appearance, a comparatively narrow strip of coral rock thinly coated with soil, and covered with a vigorous growth of coconuts, pandanus, and breadfruit-trees, inclosing a large still sheet of water, usually of considerable depth, and often well supplied with fish. The circle of coral is sometimes complete, showing no apparent communication between the inclosed lagoon and the surrounding sea; but generally it is interrupted, and presents one or more openings suitable for the passage of boats.

atollant, *n.* See *atoll*.

atom (at'om), *n.* [Early mod. E. also *atome*, *atton* (and as L. *atomus*, *atomos*, with pl. *atomi*, sometimes *atomie*, > E. sing. *atomie*, *atomy*¹, q. v.), < ME. *atome*, *atome*, < F. *atome* = Sp. *átomo* = Pg. *átomo* = G. Dan. *Sw. atom*, < L. *atomus*, < Gr. ἄτομος, an atom, prop. adj., indivisible, that cannot be cut, < ἄ-priv. + τμήω, verbal adj. of τέμνω, *temnō*, cut: see *to-me*.] **1.** An extremely minute particle of matter: a term used generally with certain philosophic or scientific limitations. (a) A hypothetical particle of matter so minute as to admit of no division; an ultimate indivisible particle of matter. See *atomic philosophy*, under *atomic*.

No atoms casually together lurid
Could'er produce so beautiful a world.

Dryden, *Epistles*, i. 31.

(b) A particle of matter assumed not to be divided under the circumstances considered; a molecule.

An *atom* means something which is not divided in certain cases that we are considering.

W. K. Clifford, *Lectures*, I. 186.

(c) In *chem.* and *physics*, the unit of matter; the smallest mass of an element that exists in any molecule. The number of kinds of atoms is the same as the number of the elements. All atoms of the same element have the same constant weight. They are for the most part combined with other atoms, either of the same or of a different kind, forming molecules, and are indivisible by chemical

force. The atom is sometimes called the chemical unit, in distinction from the molecule or physical unit, the latter being the smallest particle of any kind of matter which can exhibit all the properties of that matter; but atom is also sometimes used as synonymous with molecule in this sense.

Hence—2. Anything extremely small; a minute quantity: as, he has not an atom of sense. —3. The smallest division of time, equal to about $\frac{1}{10}$ of a second.—4. Anything indivisible; an individual. = *syn.* *Molecule*, etc. See *particle*.

atom' (at'om), *v. t.* [*< atom, n.*] To reduce to atoms; atomize.

And atom'd mists turn instantly to hail.

Drayton, *Elegies*, i.

Howell, *Hist. Scientific Ideas*.

The gods, the gods!

If all be atoms, how then should the gods,

Being atomic, not be dissoluble,

Not follow the great law? *Tennyson, Lucretius*.

2. Extremely minute.—**Atomic or molecular heats of bodies**, the product of the specific heats of bodies into their atomic weights. These products are nearly the same for all elementary bodies, and in compounds of like atomic composition, though the products of the specific heats into the atomic weights may differ in different classes of compounds.—**Atomic or atomistic philosophy**, a system of philosophy, founded by Leucippus and Democritus, which taught that the ultimate constituents of all things are indivisible particles or atoms, which differ from one another in form and position; whether also in quality of material was disputed among the atomists. From the diverse combination and motions of these atoms all things, including the soul, were supposed to arise. The atomistic philosophy was perfected in its details by the Epicureans, particularly by Lucretius, and was the first complete system of materialism. It is the basis of the modern physical *atomic theory*, but, apart from the numerous special modifications which the progress of modern science has rendered necessary, it differs from it essentially in this, that the ancient atomism was a philosophy of the universe, while modern atomism is, primarily at least, merely a physical theory of the inner structure of matter, constructed for the convenience of physical research.—**Atomic theory, or doctrine of definite proportions**, in *chem.*, the hypothesis that all chemical combinations take place between the ultimate particles or atoms of bodies, and that these unite either atom with atom or in proportions expressed by some simple multiple of the number of atoms.—**Atomic volume**, in *chem.*, the space occupied by a quantity of an element in the solid state proportional to its atomic weight, and expressed by the quotient of the specific gravity divided by the atomic weight.—**Atomic weight**, in *chem.*, the number expressing the relative weight of one atom of an element compared with the weight of some unit, usually that of the hydrogen atom, which is the lightest at present known. The atomic weights of the other elements, therefore, express how many times the atoms of these elements are heavier than the atom of hydrogen. See *element*.

atomical (a-tom'i-ka'l), *a.* Same as *atomic*.

atomically (a-tom'i-ka'l-i), *adv.* In an atomic manner; from an atomic point of view; regarded as an atom, or as made up of atoms.

atomicism (a-tom'i-sizm), *n.* [*< atomic + -ism.*] Atomism.

atomicity (at-om-i-s'i-ti), *n.* [*< atomic + -ity.*] In *chem.*, same as *equivalency* and *quantivalency*.

The number of bonds possessed by an element, or its atomicity, is apparently, at least, not a fixed and invariable quantity. *E. Frankland, Exper. in Chem.*, p. 9.

atomisation, etc. See *atomization*, etc.

atomism (at'om-izm), *n.* [*< atom + -ism; = F. atomisme = Sp. Pg. It. atomismo.*] 1. The metaphysical or the physical theory of atoms; atomic philosophy or atomic theory. See *atomic*.

Atomism also is inconceivable; for this supposes atoms, minima, extended but indivisible.

Sir W. Hamilton, Metaphys., II. 528, App.

3. In *theol.*, the reconciliation of God and man by means of the life, sufferings, and death of Christ.

For God was in Christ, and made agreement bitwene the worlde and hym sylfe, and imputed not their synnes vnto them; and hath committed to vs the preachunge of the atonement.

Tyndale, 2 Cor. v. 19.

When we were enemies we were reconciled to God by the death of his Son; . . . we also joy in God through our Lord Jesus Christ, by whom we have now received the atonement.

Rom. v. 10, 11.

This doctrine assumes that sin has made a spiritual separation between God and the human soul. Different systems of theology explain differently the method of reconciliation, and therefore use the word *atonement* with different meanings. The early fathers generally stated the doctrine in the terms of Scripture, and it was not until the time of the Reformation that the differences in philosophical statement were clearly marked. The modern statements may be grouped under four general heads, as follows: (a) A reparation or satisfaction for sin made by the sufferings of Christ as a substitute for the sinner, and in lieu of the punishment to which the sinner was justly amenable. Such satisfaction is regarded as necessary either (1) to satisfy the justice of God, and so make forgiveness possible, or (2) to satisfy the law of God, produce the public impression which punishment would have produced, and so make forgiveness safe. The former is known as the *satisfaction*, the latter as the *governmental theory*.

The word *atonement*, in its original sense, always denotes some amends, or satisfaction, for the neglect of some duty, or the commission of some fault; a satisfaction with which, when supposed to be complete, the person injured ought reasonably to be contented, and to demand of the offender nothing more on account of his transgression.

Dwight, Theology, iv.

Taking the term *atonement* in its technical signification to denote the satisfaction of divine justice for the sin of man, by the substituted penal sufferings of the Son of God, we shall find a slower scientific unfolding of this great cardinal doctrine than of any other of the principal truths of Christianity.

Shedd, Hist. Christian Doctrine, v. 1.

(b) The entrance of God into humanity, that he may thereby drive out sin and make the human race at one with himself.

Supposing the Father's will to be a will to all good; the Son of God, being one with him, and Lord of man, to obey and fulfil in our flesh that will by entering into the lowest condition into which man had fallen through their sin; this Man to be, for this reason, an object of continual complacency to his Father, and that complacency to be fully drawn out by the death of the cross;—his death to be a sacrifice, the only complete sacrifice ever offered, the entire surrender of the whole spirit and

body to God; is not this in the highest sense *atonement*? is not the true root of humanity revealed? is not God in him reconciled to man? *Maurice, Theol. Essays.*

It [the new theology] holds to the *atonement* as a divine act and process of ethical and practical import—not as a mystery of the distant heavens and isolated from the struggle of the world, but a comprehensible force in the actual redemption of the world from its evil.

T. T. Munger, The Freedom of Faith.

The majority of orthodox divines, whether in the Roman Catholic or the Protestant churches, ordinarily hold one of the above views or a combination formed from them. In general, the former opinion (a) is held in the Calvinistic school of theology, the latter opinion (b) in the more modern Broad Church school. (c) In *Unitarian theology*, the moral result produced by the influence exerted on mankind by the life and death of Christ, leading men to repentance and to God. This is sometimes known as the *moral influence* theory of the atonement.

Even though we should reject all the Orthodox theories about *atonement*, we may accept the fact. We can believe that God in Christ does reconcile the world to himself,—does create a sense of pardoned sin,—does remove the weight of transgression,—does take away the obstacle in our conscience,—does help us into a living faith, hope, peace, joy. *J. F. Clarke, Orthodoxy, p. 250.*

(d) In *New Church* (Swedenborgian) *theology*, the union and accord of flesh and spirit in man, and so the union and accord of man with God by a spiritual change wrought in the individual.

This is what is understood in the New Church by the *atonement*, or at-one-ment, . . . a bringing at one of the human and the divine, or, as the apostle says, "making in himself of twain one new man." And the purpose of this *atonement* was, that the Lord might ever after be able to bring our external or natural at one with our internal or spiritual man—goodness at one with truth in our minds,—and so bring us into complete spiritual union or at-one-ment with himself.

E. F. Barrett, Doctrine of the New Church.

Doctrine of blood atonement, the doctrine, attributed to the Mormon Church, that the killing of an apostate or of one in danger of apostasy is a deed of love, since it makes atonement for the sin of apostasy, and so makes possible God's forgiveness of it.

2†. Very grievous; violent: as, *atrocious* distempers.—3. Very bad; execrable; as, an *atrocious* pun. [*Colloq.*]=*Syn. 1. Wicked, Scandalous, Shocking, Flagrant, Heinous, Infamous, Outrageous, Atrocious, Monstrous*, horrible, villainous, flagitious, diabolical, agree in expressing great and intentional badness, calling for strong abhorrence. Because they are used with feeling, the recognition of their differences is not always practicable. *Flagrant* and *heinous* are hardly applicable to persons; the others apply to persons or things. *Wicked* is the generic word, and is the lightest where all are strong; it is the one that is most common in a playful use, yet it is at times an intense word, as forcible as any of the others, though less definite. *Scandalous* means offensive to decency, and so disgraceful. That which is *shocking*, literally, gives a sudden and heavy blow, and hence produces a corresponding feeling of horror or disgust, or both. That which is *flagrant*, literally, flames into notice, and hence is glaring, striking, and so notorious, enormous in badness. *Heinous* means hateful, and hence aggravated. That which is *infamous* is worthy of a total loss of reputation, and hence has a reputation or character of the worst kind, especially for baseness. *Outrageous* means attended with outrage, doing outrage, especially outraging decency, going beyond all bounds, like the acts of a madman. *Atrocious* is primarily fierce or cruel, savage, bloody, and wicked, enormously wicked, hence violating the first principles of humanity or of human nature. That which is *monstrous* is so bad as to be out of the course of nature; a prodigy or miracle of badness. See *abandoned*, *criminal*, *irreligious*, and *refarious*.

As even here they talked at Almesbury
About the good King and his wicked Queen.
Tennyson, Guinevere.

So the king arose and went
To smoke the *scandalous* hive of those wild bees
That made such honey in his realm.

7†. To overtake; come up with; as, "not attaining him in time," *Bacon*.—8†. To come to know; experience. *Chaucer*.—**Syn.** 4. *Attain*, *Obtain*, *Procure*, reach, achieve, get possession of, carry. (See lists under *acquire* and *accomplish*; also note under *attainable*.) *Attain* involves the idea of considerable effort, while *obtain* does not necessarily imply effort at all, and *procure* only a small degree of it: thus, we may *obtain* property by inheritance, we may *procure* a book by purchase, but we can *attain* an end only by exertion. *Attain* generally has higher or more abstract objects than *obtain* or *procure*: as, to *obtain* an office or a patent; to *procure* a chair; to *attain* eminence; *attain* one's end. In these cases it would be ludicrous to use *attain* in place of *obtain* or *procure*.

I will attend my husband, be his nurse,
Diet his sickness, for it is my office,
And will have no attorney but myself.
Shak., C. of E., v. 1.

Specifically—2. In *law*, one who is appointed or admitted in the place of another to transact any business for him. An attorney in fact, sometimes called a *private attorney*, is an attorney authorized to make contracts and do other acts for his principal, out of court. For this purpose a written authority is usual, but verbal authority is in general sufficient. For the performance of some acts, however, as conveyance of land, transfer of stock, etc., a formal power of attorney is necessary.

An attorney at law, sometimes called a *public attorney*, is a person qualified to appear for another before a court of law to prosecute or defend an action on behalf of such other. The term was formerly applied especially to those practising before the supreme courts of common law, those practising in chancery being called *solicitors*. Under the present English system, all persons practising before the supreme courts at Westminster are called *solicitors*. In England attorneys or solicitors do not argue in court in behalf of their clients, this being the part of the *barristers or counsel*; their special functions may be defined to be: to institute actions on behalf of their clients and take necessary steps for defending them; to furnish counsel with the necessary materials to enable them to get up their pleadings; to practise conveyancing; to prepare legal deeds and instruments of all kinds; and generally to advise with and act for their clients in all matters connected with law. An attorney, whether private or public, may have general powers to act for another, or his power may be special, and limited to a particular act or acts. In the United States the term *barrister* is not used, the designation of a fully qualified lawyer being *attorney and counselor at law*. When employed simply to present a cause in court, an attorney is termed *counsel*. In Scotland there is no class of practitioners of the law who take the name of attorneys. See *advocate*, 1.

He has general powers to act in all legal proceedings in which the state is a party, and is regarded as the official legal adviser of the executive. In England the attorney-

general is specially appointed by letters patent. In the United States he is a member of the cabinet appointed by the President, has the general management of the departments of justice throughout the country, advises the President and departments on questions of law, and appears for the government in the Supreme Court and Court of Claims. The individual States of the Union also have their attorneys-general. See *department*.

attraction (a-trak'shon), *n.* [= F. *attraction*, *< L. attractio(n)-*, *< attrahere*, attract; see *tract*¹.] 1. The act, power, or property of attracting. Specifically—(a) In *phys.*, the force through which particles of matter are attracted or drawn toward one another; a component acceleration of particles

toward one another, according to their distance. Such attraction is a mutual action which in some form all bodies, whether at rest or in motion, exert upon one another. The attractive force with which the atoms of different bodies in certain cases tend to unite, so as to form a new body or bodies, is called *chemical affinity*; that which binds together the molecules of the same body is called *cohesion*; those of different bodies, *adhesion*. Connected with the last-named forces is *capillary attraction*, by which liquids tend to rise in fine tubes or small interstices of porous bodies. In all the cases mentioned the forces act only through very small distances. When bodies tend to come together from sensible distances, the force being directly proportional to the product of their masses and inversely proportional to the square of the distance between them, the attraction is called *gravitation*, as when the earth attracts and is attracted by a falling body, or attracts and is attracted by the moon, etc.; or *magnetism*, as when exerted between the unlike poles of a magnet; or *electricity*, as when dissimilarly electrified bodies attract one another. See *capillary, chemical, cohesion, electricity, gravitation, magnetism*. (b) The power or act of alluring, winning, or engaging; allurement; enticement; as, the attraction of beauty or eloquence.

A repulsive force is positive; an attractive, which diminishes the distance between two masses, is negative.

A. Daniell, Prin. of Physics, p. 168.

3. Having the power of charming or alluring by agreeable qualities; inviting; engaging; enticing.

=**Syn.** *Attribute, Ascribe, Refer, Impute, Charge*, have two meanings in common: they may assign some attribute, quality, or appurtenance to a person or thing, or they may connect different things, as an effect with its cause. *Refer* is the weakest. *Attribute* is stronger: as, to attribute omniscience to God; to attribute failure to incompetence. *Ascribe*, being most manifestly figurative, is the strongest and most common; it is rarely used in a bad sense. That which is imputed in the first sense named is generally but not always bad: as, to impute folly to a man. To impute anything good seems an archaic mode of expression. *Impute* is not very common in the second sense: as, to impute one's troubles to one's follies. The theological meaning of *impute*, that of laying to a person's account something good or bad that does not belong to him, has affected but little the popular use of the word. That which is charged, in either of the senses named, is bad: as, "His angels he charged with folly." Job iv. 18: I charged it to their youth and inexperience. The word is a strong one, on account of its connection with legal processes, etc.

The singular excellence to which eloquence attained at Athens is to be mainly attributed to the influence which it exerted there.

Macauley, Athenian Orators.

I have never yet encountered that bitter spirit of bigotry which is so frequently ascribed to Mohammedans.

B. Taylor, Lands of the Saracen, p. 24.

And more, much more.

Shak., Lear, v. 3.

attribute (at'ri-būt), *n.* [*< L. attributum, predicate, attribute, lit. what is ascribed, neut. of attributus, pp. of attribuer, ascribe, attribute: see attribute, v.*] **1.** In logic, that which is predicated or affirmed of a subject; a predicate; an accident.

A predicate, the exact limits of which are not determined, cannot be used to define and determine a subject. It may be called an attribute, and conveys not the whole nature of the subject, but some one quality belonging to it.

Abp. Thomson, Laws of Thought, p. 120.

The term attribute simply directs the attention to the fact that we attribute to, or affirm of, a being something that we distinguish from itself.

X. Porter, Human Intellect, § 642.

2. A character inseparable from its subject.

By this word attribute is meant something which is immovable and inseparable from the essence of its subject, as that which constitutes it, and which is thus opposed to mode.

Descartes.

Some necessary marks belong to things as reasons of other marks of the same things, others as consequences of other marks. . . . The latter are called attributes.

Kant.

3. A characteristic or distinguishing mark; especially, an excellent or lofty quality or trait: as, wisdom and goodness are his attributes.

Serv. . . . with him the mortal Venus, the heart-blood of beauty, love's invisible soul.

Pan. Who, my cousin Cressida?

Serv. No, sir, Helen: could you not find out that by her attributes?

Shak., T. and C., iii. 1.

The term attribute is a word properly convertible with quality, for every quality is an attribute, and every attribute is a quality; but custom has introduced a certain distinction in their application. Attribute is considered as a word of loftier significance, and is, therefore, conventionally limited to qualities of a higher application. Thus, for example, it would be felt as indecorous to speak of the qualities of God, and as ridiculous to talk of the attributes of matter.

Sir W. Hamilton, Metaph., I. 151.

4. In the fine arts, a symbol of office, character, or personality: thus, the eagle is the attribute of Jupiter.

The ladder is a striking attribute for the patriarch Jacob and the harp for King David.

Fairholt.

Persephone is recognised by the lofty nodus, or corn measure, on her head, the attribute of the Chthonian deities.

C. T. Newton, Art and Archæol., p. 87.

5. Reputation; honor.

Much attribute he bath; and much the reason
Why we ascribe it to him.

Shak., T. and C., ii. 3.

6. In gram., an attributive word; a word denoting an attribute.—**Symbolical attributes.** See *symbolical*.—**Syn. 1-3.** *Property, Characteristic, etc.* See *quality*.

2. That which is ascribed; attribute.

If speaking truth.

In this the age, were not thought flattery,
Such attribution should the Douglas have,
As not a soldier of this season's stamp
Should go so general current through the world.

Shak., 1 Hen. IV., iv. 1.

3. Authority or function granted, as to a ruler, minister, or court.

It is not desirable that to the ever-growing attributions of the government so delicate a function should be superadded.

An attributive word is to be distinguished from a predicate: as, the pen is bad; the man is ruined; and from an appositive: as, the pen, bad as it is, might be worse; this man, ruined by another's misconduct, is in misery. All adjective words, as proper adjectives, adjective pronouns, and participles, may be used attributively; also nouns: as, a pine table; a gold ring; my hunter friend; the young soldier-boy. The relation of an adverb to the adjective qualified by it is also by some called attributive.

These were people trained by attrition with many influences.

E. S. Phelps, Beyond the Gates, p. 119.

3. In theol., imperfect contrition or repentance, with real detestation of sin, and a true purpose of amendment, arising from those supernatural motives of faith which are lower than charity, or the true love of God for his own infinite perfections. Such motives are a love of justice for its own sake, the intrinsic shamefulness of sin, the fear of divine punishment, etc. *Attrition* remits sin only when complemented by the grace conferred through sacramental absolution. See *contrition*.

Attrition by virtue of the keys is made contrition.

Quoted in *Abp. Fisher's Ans.* to a Jesuit, v.

attrition-mill (a-trish'ou-mil), *n.* A mill, usually centrifugal, in which grain is pulverized by the mutual attrition of its particles, and by frictional contact with the sides.

those bored by a bit or gimlet. It consists of an iron shank ending in a steel bit, and a handle placed at right angles with the shank. The augers formerly made

with a straight channel or groove are called *pod-augers*; augers of the modern form, with spiral channels, are called *screw-augers*. The ordinary screw-auger is forged as a paralleled blade of steel, which is twisted while red-hot. The end terminates in a worm, by which the auger is gradually drawn into the work, like the gimlet. Another form is that of a cylindrical shaft, around which is brazed a single fin or rib, the end being made into a worm, and immediately behind the worm a small diametrical mortise is formed for the reception of a detached cutter, which exactly resembles the chisel-edge of the center-bit. *Expanding augers* have cutters susceptible of radial adjustment for boring holes of different sizes. In the *slotting-auger*, used for channels, mortises, etc., the cutting lips are upon the side of the auger as well as at the end, and the piece to be grooved is fed against them laterally. Mortises are cut by causing the auger to penetrate to the proper depth, and then feeding the work laterally to the required length. The two rounded ends of the mortise are then squared with the

chisel. The *square-hole auger* is an auger revolving within a rectangular tube or boring, whose lower edge is sharpened to cut away the remaining substance of the square circumscribing the round hole which the auger bores a little in advance.

2. An instrument for boring the

soil. Such an instrument used in setting posts is called a *post-hole auger*, and one for ascertaining the nature of the subsoil, the presence or absence of water, etc., is called specifically an *earth-boring auger*. augur (â'gér), *n.* [< ME. *augur*, < L. *augur*, earlier *auger*, of uncertain origin, perhaps < *avis*, a bird (cf. *avis-sper* and *au-cupation*), + -*gur*, connected with *garrire*, talk, chatter.] 1. Among the ancient Romans, a functionary whose duty it was to observe and to interpret, according to traditional rules, the auspices, or reputed natural signs concerning future events.

These auspices were studied, with fixed ceremonial, in the following classes of phenomena: (1) signs from the heavens, including thunder and lightning, and other meteorological manifestations; (2) signs from the direction of flight or the various cries of birds; (3) signs from the manner of eating of domestic hens kept for this purpose; (4) signs from the movements and attitudes of animals; (5) evil omens from various fortuitous incidents, such as the fall of any object, the gnawing of a mouse, the creaking of a chair, etc., occurring during the augural ceremonies, or when these were about to begin. The official or public augurs, who constituted a college, probably founded by Numa, were originally three in number. By the time of Tarquin they had been increased to six. After 300 B. C. the number became nine, of whom five must be plebeians. Sulla made the number fifteen; Julius Caesar, sixteen, not including his own official membership in his character of perpetual chief priest and dictator; and toward the close of the empire the number was still further increased. The augurs wore the sacerdotal *prætexta*, or toga with a broad purple border, and their distinctive emblem was the curved rod called the *lituus*, with which they marked out the limits of the templum or boundary within which the omens with which they had to do were to be observed. Before any public business or ceremony was undertaken the augurs decided whether the auspices were propitious, or whether unfavorable omens demanded interruption or delay; they conducted the inauguration or exauguration of places, temples, and places, such as new settlements, and fixed the times of movable festivals. In the engraving, the figure holds the *lituus* in his right hand, while one of the sacred fowls appears at his feet.

Hence—2. One who pretends to foretell future events by omens; a soothsayer; a prophet; one who bodes, forebodes, or portends.

Alca*, *q. v.*] A diving bird belonging to the family *Alcidae* and the order *Pygopodes*, characterized by having 3 toes, webbed feet, and short wings and tail. Originally the name was specifically applied to the great auk, or garcfowl, *Alca impennis*, which became extinct about 1844, notable as the largest bird of the family and the only one deprived of the power of flight by reason of the smallness of its wings, though these were as perfectly formed as in other birds. It was about 30 inches long, the length of the wing being only about 6 inches. Its color was dark-brown above and white below, with a large white spot before the eye. It abounded on both coasts of the North Atlantic, nearly or quite to the arctic circle, and south on the American side to Massachusetts. The name came to be also specifically applied to the razor-billed auk, *Alca or Uta mania torda*, a similar but much smaller species, about 15 inches long, with a white line instead of a spot before the eye; and finally, as a book-name, it was made synonymous with *Alcidae*. Several North Pacific species still bear the name, as the rhinoceros auk (*Ceratophila monocestrata*), the crested auk (*Simorhynchus cristellus*), etc.; but other special names are usually found for most of the birds of this family, as *puffin*, *murre*, *gull-mot*, *sovetke*, *auklet*, etc. There are about 24 species belonging to the family. The rising light of the morning; the dawn of day, or morning twilight.—2. [*cap.*] In *Rom. myth.*, the goddess of the dawn: called Eos by the Greeks. The poets represented her as rising out of the ocean in a chariot, her rosy fingers dropping gentle dew.

3. The aurora borealis or the aurora australis (the polar lights).

The most probable theory of the aurora is that originally due to Franklin, namely, that it is due to electric discharges in the upper air.

S. P. Thompson, Elem. Lessons in Elect. and Mag., p. 264.

4. A reddish color produced by dyeing with *arnotto*.—**Aurora australis**, the aurora of the southern hemisphere, a phenomenon similar to the aurora of the north.—**Aurora borealis**, the boreal or northern dawn; the northern lights or streamers; a luminous meteoric phenomenon appearing at night. It usually manifests itself by streams of light ascending toward the zenith from a dusky line of cloud or haze, a few degrees above the horizon, and stretching from the north toward the west and east, so as to form an arc, with its ends on the horizon. Sometimes it appears in detached places; at other times it covers almost the whole sky. As the streams of light have a tremulous motion, they are called in many places "the merry dancers." They assume many shapes and a variety of colors, from a pale red or yellow to a deep red or blood-color; and in the northern latitudes they serve to illuminate the earth and cheer the gloom of the long winter night. The appearance of the aurora borealis so exactly resembles the effects of artificial electricity that there is every reason to believe that their causes are identical. When electricity passes through rarefied air it exhibits a diffused luminous stream which has all the characteristic appearances of the aurora, and hence it is highly probable that this natural phenomenon is occasioned by the passage of electricity through the upper regions of the atmosphere, although under conditions not as yet entirely understood. The connection of the auroral displays with disturbances of the magnetic needle is now regarded as an ascertained fact. The aurora borealis is said to be frequently accompanied by sound, which is variously described as resembling the rustling of pieces of silk against each other, or the sound of wind against the flume of a candle. The spectrum of the aurora is peculiar in consisting of a prominent line in the greenish-yellow (citron line), which has not been identified with any known substance; also occasionally a sharp line in the red and some others less prominent have been observed.—**Aurora polaris**, polar aurora; the aurora of either the northern or the southern hemisphere.

4. Severely simple; unadorned.—*Syn.* 2. *Austere, Severe, Stern, Hard, Harsh, Strict, Rigorous, Rigid, stiff, uncompromising, relentless*, may characterize a person's dealings with himself or with others. *Austere* is the most individual word in the list; it still suggests the etymological sense of dryness and hardness of nature. As applied to manner of life, it implies self-mortification, refusal of pleasure, or the self-infliction of pain, for the purpose of self-discipline. The *austere* man may treat others as he treats himself; an *austere* manner is of a corresponding sort. There is no suggestion of hypocrisy or self-righteousness in the word, nor does it go so far as asceticism (see *self-denial*). *Severe* starts from the notion of seriousness or freedom from levity, but extends through a wide range, covering most of the meanings of the other words. *Stern*, while primarily meaning fixed in facial expression, applies to almost anything to which *severe* can apply. *Hard* is of the same character, but starts from the notion of physical hardness, proceeding thence to mean difficult to endure, unfeeling, etc. *Harsh* primarily expresses physical roughness, as a *harsh* touch, and retains some figurative suggestion akin to that idea. *Strict* is drawn close, tense, not relaxed, observing exact rules for one's self or requiring such observance from others. *Rigorous* means, literally, stiff, and hence allowing no abatement or mitigation; inflexible; unsparring. *Rigid* is the same as *rigorous*, but with somewhat more of the original figurativeness than in *rigorous*; both are opposed to *lax* or *indulgent*. *Rigid* is more often used of unnecessary, overwrought, or narrow-minded strictness than *rigorous*. We speak of *austere* morality; a *severe* aspect, treatment, tone; a *stern* rebuke; a *hard* master, voice, judgment; *harsh* enforcement of laws; *strict* rules, discipline, repression of mischief; *rigorous* justice; *rigid* adherence to petty restrictions. See *acrimony*.

Rule, dominion, government; warrant, permission, authorization.—2. *Influence, Authority, Ascendancy, Control, Sway, Domination,* may all apply to persons or things, but seem primarily to belong to persons. *Influence and authority* imply moral power; the others may do so, and are considered to do so here. The words are arranged in the order of their strength. *Influence* may be small; it is wholly apart from the power of office; the word expresses the extent to which one affects the conduct or character of others simply by their deference to him on account of his station, wealth, ability, character, etc. *Authority* is, in this connection, influence amounting to a recognized right to command: as, the authority of age, wisdom, experience. It is presumably rightful, while the other words often express undue or unwholesome weight or power. *Ascendancy* is overmastering influence, supremacy by influence; the word is often used in a bad sense: as, the ascendancy of cunning over simplicity. *Control* is complete or successful and continued authority: as, his control over the convicts was maintained without resort to force. *Sway* is, by its derivation, control over that which may be viewed as a weighty or massive object; hence, a solid or powerful or controlling influence. *Domination*, as it may be an absolute and tyrannical rule, may also be an absolute and tyrannical influence or ascendancy: as, he was really under the domination of those whom he thought his servants or tools.

The fall or sliding down of a mass of snow or ice from a mountain-slope. The sliding down of ordinary snow is, in high snow-covered mountains, an event of frequent occurrence, and is generally not dangerous or destructive, since it mostly takes place high above habitations and forests. Partly consolidated snow, or neve, however, is sometimes set in motion in large quantities, and such an occurrence may be productive of very serious injury, especially to the forests below. Small glaciers sometimes detach themselves from their rocky beds and fall into the valley below; such events are rare, but have sometimes been attended by very disastrous results. The more terrible catastrophes which have occurred, and by which, especially in the Alps, whole villages have been buried, have been due to the sliding down of a portion of the rock itself of which the mountain was formed. These "rock-avalanches," as they are sometimes called, are more properly denominated land-slips or land-slides. See *land-slip*, *land-slide*.

Byron, Don Juan, i. 216.

=**Syn.** *Avarice*, *Covetousness*, *Cupidity*, penuriousness, closeness, miserliness, all denote bad qualities, corruptions of the natural instinct of possession. *Avarice*, literally greediness, a strong desire to get objects of value, has become limited, except in figurative uses, so as to express only a sordid and mastering desire to get wealth. *Covetousness* and *cupidity* are not limited to wealth, but may have for their object anything that can be desired, *cupidity* being directed especially toward material things. *Covetousness* longs to possess that which belongs to another; hence the prohibition in the tenth commandment (Ex. xx. 17). *Cupidity* is more active than the others, less groveling, and more ready to snatch from others that which *covetousness* may wish for without trying to get. See *peevirious*.

There grows,

Ave Maria, the Hail Mary, a devotion or prayer used in the Western Church. In the older form it consists of the salutation of the angel Gabriel to the Virgin Mary when he announced to her the incarnation (Luke i. 28), together with the words of Elizabeth to Mary (Luke i. 42). This form of the Hail Mary was used as an anthem in both the Eastern and Western churches as early as the seventh century. It came into wide use as a devotion in the eleventh century. The concluding words, "Holy Mary, Mother of God, pray for us," etc., were first introduced in the fifteenth century, and first authorized for daily use in the breviary in 1568. Also called the *angelic salutation*. See *angelus*.

Aves (ā'vēz), n. pl. [*L.*, pl. of *avis*, a bird; cf. *Skt. vi* = *Zend vi*, a bird. Cf. also *ovum* and *egg*.] Birds; feathered animals, considered as a class of vertebrates, next after mammals: sometimes united with *Reptilia* in a superclass *Sauropsida*, distinguished on the one hand from *Mammalia*, and on the other from *Ichthyopsida*, or amphibians and fishes together. *Aves* are defined by the following characteristics: a body covered with feathers, a kind of exoskeleton no other animals possess; hot blood; completely double circulation; perfectly 4-chambered heart; single and dextral aortic arch; fixed lungs; air-passages prolonged into various air-sacs, even into the interior of some of the bones of the skeleton; oviparous reproduction; eggs large and meroblastic, with copious food-yolk and albumen and a hard calcareous shell; limbs 4 in number, the anterior pair of which are modified as wings, and generally subservient flight by means of their large feathers, the distal segment of the limb being compressed and reduced, with not more than 3 digits, usually not unguiculate; the metacarpals more or less ankylous as a rule, and the free carpals normally only 2 in adult life; a large breast-bone, usually carinate, and great pectoral muscles; numerous dorsolumbar, sacral, and urosacral vertebrae: ankylous into a sacrum; ilia greatly produced forward, and ilia and ischia backward, normally without median symphyses; perforate cotyloid cavity; the trochanter of the femur articulating with an iliac antitrochanter, and the flula incomplete below; the astragalus ankylous with the tibia, and assisting in forming the tibial condyles; mediotarsal ankle-joint; not more than 4 metatarsals, 3 ankylous together, and not more than 4 digits, the phalanges of which are usually 2, 3, 4, or 5 in number; the hind limb fitted as a whole for bipedal locomotion; and no teeth in any recent forms, the jaws being sheathed in horn. Birds have undergone little modification since their first appearance in the Jurassic age; their classification is consequently difficult, and no leading authors agree in detail. *Linnaeus* (1766) divided them into 6 orders: *Accipitres*, *Pica*, *Au-seres*, *Grallæ*, *Gallinæ*, and *Passeres*. *Cuvier's* arrangement (1817) was similar, with the 6 orders *Accipitres*, *Passerina*, *Scansores*, *Gallinæ*, *Grallæ*, and *Palmpedæ*. A system said to have been originally proposed by *Kirby*, and formerly much in vogue among English ornithologists, recognized *Natatores*, *Grallatores*, *Cursores*, *Rasores*, *Scansores*, *Insesores*, and *Raptores* as orders. The latest artificial system is that of *Sundevall* (1872-3), with the orders *Oscines*, *Poluceres*, *Accipitres*, *Gallinæ*, *Grallatores*, *Natatores*, *Proceres*, and *Saurura*, 42 subordinate groups, and 1,229 genera. In 1867 *Huxley* divided birds into 3 orders: *Saurura*, *Ratitæ*, and *Carinatæ*; the latter into 4 suborders, *Dromæognathæ*, *Schizognathæ*, *Desmognathæ*, and *Egithognathæ*, and 16 superfamily groups—an arrangement very different from any preceding one. The discovery of *Odontornithes*, or toothed birds, led to another primary division by *Marsh* into *Odontoptera*, *Odontotoma*, and *Saurura*; this author not extending his classification to recent birds. In 1884 *Coues* divided all birds into 5 subclasses: (1) *Saurura*, with teeth, amphiceleous vertebrae, carinate sternum, separate metacarpals, and long, lizard-like tail; (2) *Odontotoma*, with socketed teeth, biconcave vertebrae, carinate sternum, ankylous metacarpals, and short tail; (3) *Odontoptera*, with teeth in grooves, heterocoelous vertebrae, rudimentary wings, ratite sternum, and short tail; (4) *Ratitæ*, without teeth, with heterocoelous vertebrae, ratite sternum, rudimentary wings, ankylous metacarpals, and short tail; (5) *Carinatæ*, without teeth, with heterocoelous vertebrae, carinate sternum, developed wings, ankylous metacarpals, and short tail. The *Carinatæ* include all living birds, except the few struthious or ratite birds. For the carinate subclass or order, some 15 or 20 ordinal or subordinal groups are now usually adopted. One of these, *Passeres*, includes a large majority of all birds. The genera or subgenera of birds in use now range from about 1,200 to about 2,900. The species are usually estimated at about 10,000. See *bird* and *Sauropsida*.

F. poids, by mistaken reference to L. pondus, weight) = Pr. pes, pens = It. peso, < L. pensum, weight, < pendere, weigh; see poise, pendant.*]

1. A system of weight in which one pound contains 16 ounces. It was introduced into England from Bayonne about A. D. 1300, and is substantially the Spanish system. In *avoirdupois* weight 7,000 troy grains (formerly, and now in the United States, approximately, but in Great Britain exactly) make a pound, while in troy weight the pound contains 5,760 grains, the grain being the same in both cases; hence, 175 pounds troy are equal to 144 pounds *avoirdupois*. The pound *avoirdupois* is the standard weight of Great Britain, and is equal to 453.6 grams in the French metric system. *Avoirdupois* weight is used in determining the weights of all commodities except gems and the precious metals. It is reckoned as follows:

	Cwt.	Qrs.	Pounds.	Ounces.	Drains.
1 ton	= 20	= 80	= 2,240	= 35,840	= 573,440
1 hundredweight	= 4	= 112	= 1,792	= 28,672	
1 quarter	= 28	= 448	= 7,168		
1 pound			= 16	= 256	
1 ounce				= 16	

In the United States the hundredweight is now commonly 100 pounds, and the ton 2,000 pounds, called the *short ton* in distinction from the *long ton* of 2,240 pounds.

2. The weight of anything according to the *avoirdupois* system: as, his *avoirdupois* was 150 pounds. [*Colloq.*]

The beast long struggled as being like to prove
An *awkward* sacrifice. *Marlowe*.

=*Syn.* 5 and 6. *Awkward, Clumsy, Ungainly, Uncouth, Bungling*, unhandy, inept, unskilful, inapt, lubberly; uncourtly, inelegant, constrained, clownish. *Awkward* is generally applied to want of ease and grace or skill in bodily movement, especially of the arms or legs: as, an *awkward* gait; *awkward* in the use of a tool. *Clumsy* starts from the notion of heaviness, and consequent unskillfulness or awkwardness in use; it is applicable to the whole body or to any part of it, even when still: as, a *clumsy* figure; *clumsy* hands. This difference is also found in the figurative use of the words: a *clumsy* excuse is one that is put together badly; an *awkward* excuse is one that may be good, but is not gracefully presented. *Ungainly*, literally unhandsome, not pleasing to the eye, is applied generally to awkwardness of appearance. *Uncouth*, literally unknown, uncommon, and so, by a bit of human conceit, untrained, unrefined, sometimes even rude, barbarous: as *uncouth* phrases, manners. *Bungling*, awkward in doing, handling awkwardly, spoiling by awkwardness, in either literal or figurative use: as, he made *bungling* work of it.

as a weapon of offense. The modern ax consists of a head of iron, with an arching edge of steel, and a helve or handle. The edge is in the plane of the sweep of the tool, thus differing from the *adz*, in which the edge is at right angles to the plane of the sweep. As a weapon, the ax was in very common use from the earliest times until the general adoption of firearms. It was used by the Egyptians. By the Greeks it was looked upon as a weapon of their own ancestors and of the Asiatic nations, and so figured in works of Greek art. The northern nations who overthrew the Roman empire used many varieties of this weapon, and its use prevailed throughout the middle ages in Europe. A light ax was common among the Arabs and Moors. Axes of various kinds of stone, or entirely of copper or bronze, are found among prehistoric and ancient remains, and in use by barbarous races. A self-evident, undemonstrable, theoretical, and general proposition to which every one who apprehends its meaning must assent. The Greek word was probably applied by Plato (though it does not occur in his dialogues in this sense) to certain first premises of mathematics; and this continues to be the ordinary use of the term. It was extended by Aristotle to similar principles supposed to underlie other branches of knowledge. The axioms or "common notions" of Euclid, as given in English translations, are twelve in number, viz: (1) Things which are equal to the same are equal to one another. (2) If equals be added to equals, the wholes are equal. (3) If equals be added to unequals, the wholes are unequal. (4) If equals be taken from equals, the remainders are equal. (5) If equals be taken from unequals, the remainders are unequal. (6) Things which are double of the same are equal to one another. (7) Things which are halves of the same are equal to one another. (8) Magnitudes which coincide with one another, that is, which exactly fill the same space, are equal to one another. (9) The whole is greater than its part. (10) Two straight lines cannot enclose a space. (11) All right angles are equal to one another. (12) If a straight line meets two straight lines, so as to make the two interior angles on the same side of it taken together less than two right angles, these straight lines, being continually produced, shall at length meet upon that side on which are the angles which are less than two right angles. Only the first three of these are universally acknowledged to be authentic, though the latest editor, Heiberg, allows the eighth and ninth also. Euclid gives besides a list of *postulates*, which, as given in English translations, are: (1) Let it be granted that a straight line may be drawn from any one point to any other point. (2) That a terminated straight line may be produced to any length in a straight line. (3) And that a circle may be described from any center, at any distance from that center. What the English editions give as the eleventh and twelfth axioms formed originally the fourth and fifth postulates, and in the best MS. the tenth axiom appears as the sixth postulate. It would thus seem that he understood by "postulate" a geometrical premise which was asked to be taken for granted, and by "axiom" or "common notion," a not specially geometrical principle with the use of which the learner would be already familiar. This agrees with Aristotle's definition of an *axiom* as a principle which he who would learn must bring of himself. The Leibnitzians distinguish a *postulate* as a self-evident practical principle from an *axiom* as a self-evident theoretical principle. According to Kant, an axiom is a necessary and general synthetical proposition which declares a property of pure space or time and rests directly on intuition, and is thus self-evident. He refused the name to the genuine "common notions" of Euclid, holding these to be analytical propositions. Modern mathematicians seem to regard the axioms of geometry as an analysis of the independent properties of space, so that the longer the list, provided the propositions are really independent, the more perfectly has the design been fulfilled. Many eminent mathematicians hold that there is no reason to think these axioms to be exactly true, but that they must be assumed to be slightly erroneous one way or the other; although experience shows that they approximate so nearly to the truth that it may be doubted whether it will ever be possible to measure the amount of their error. A similar doctrine is held by some thinkers concerning metaphysical axioms, such as the axiom that every event is determined by causes.

2. Any higher proposition, obtained by generalization and induction from the observation of individual instances; the enunciation of a general fact; an empirical law. This use originated with Bacon, influenced probably by the employment of *axiom* by the Stoics to mean any proposition.

3†. In *logic*, a proposition, whether true or false: a use of the term which originated with Zeno the Stoic.—*Syn.* 1. *Maxim*, *Truism*, etc. See *Aphorism*.

1. The second letter in order in the English alphabet, as it was in the Phœnician, and has been in most other alphabets derived from the Phœnician. (See *A.*) The name of the Phœnician character was *beth*, meaning house; from this comes the Greek name, *beta*. The Phœnician *beth*, with some

early Greek and Latin forms of *b*, and with the ancient Egyptian characters, hieratic and hieroglyphic, from which the others are by many authorities supposed to be ultimately derived, are given below:

The value of the character is the same in all these alphabets. It is a labial sonant (or voiced) mute (or stop, or check); that is, it is made with the lips alone, by a complete closure cutting off all exit of breath from the mouth, but with accompanying sonant vibrations of the vocal chords, the current of air necessary to produce this being driven from the lungs into the closed cavity of the mouth. The corresponding surd (or voiceless) mute is *p*. (See *P.*) *B* has nothing of that variety of pronunciation shown by most English letters; but it is sometimes silent, as when final after *m*, in *lamb, limb, tomb, thumb*, and in a few other cases, as *debt, doubt*. In most of these cases *b* is a modern graphic insertion, and was never pronounced (in the English forms); e. g., *lamb, thumb, debt, doubt*. In the fundamental or Germanic part of our language *a b* comes from a more original aspirate found in Sanskrit as *bh*, in Greek as *phi* (*ph*), in Latin usually as *f*. Examples are: *E. brother* = Skt. *bhrātar* = Gr. *φράτηρ* = *L. frater*; *E. bear* (*v.*) = Skt. *√ bhar* = Gr. *φάειν* = *L. ferre*. With the English *b* corresponds that of most of the other Germanic dialects. In the original Indo-European or Aryan language *b* was nearly or altogether wanting.

2. As a numeral, *B* was used by the Hebrews and Greeks, as now by the Arabians, for 2.—

3. As a symbol: (a) In *music*, the seventh tone, or "leading tone," of the model diatonic scale, or scale of *C*. *B* was the last tone to be adopted into the modern major scale. It was the first note to be modified by lowering its pitch a semitone; its two forms, the *b rotundum* or *B flat* (*b*) and the *b quadratum* or *B natural* (*B*) (see below), afterward became conventional signs which were applied as accidentals to all the notes of the scale. See *accidental*, *n.* 1. In Italian and French the same note is called *si*. In German use *B* denotes *B flat*, while *B natural* is represented by *H*, and is called *ha*. (b) In *chem.*, the symbol of *boron*. (c) In *ornith.*, the accessory femoroacaudal muscle, one of the chief classificatory muscles of the leg. *A. H. Garrod*. (d) In *math.*, see *A*, 2 (c). (e) In abstract reasoning, suppositions, etc., the second or other person or thing mentioned: as, if *A* strike *B*. (f) In general, the second in any series: as, *Company B* (of a regiment), *schedule B*, etc.; in the form *b*, or *b*, the second column of a page, in a book printed in columns.—4. As an abbreviation, *B*. stands for—(a) *Bachelor* (or Middle Latin *Baccalaureus*), in *B. A.* or *A. B.*, *B. C. E.*, *B. D.*, *B. L.*, *B. M.*, etc. See these abbreviations. (b) In dates, *before*, as in *B. C.* or *B. C.*, and *born*, as in *b. 1813*. (c) In a ship's log-book, in the form *b*, *blue sky*. (d) In hydrometric measurements, *Baumé*: as, 8° *B*. See *Baumé's hydrometer*, under *hydrometer*. Also *Bé*.—*B*, or *B flat*, an English humorous euphemism for *bug* (*Cinex lectularius*).—*B cancellatum*, in *music*, the sharp; so called because it was originally indicated by crossing or canceling the symbol of *B quadratum*.—*B quadratum*, in *music*, literally square *B*, a modified form (*♭*) of the black-letter *b* used before the invention of accidentals to denote *B natural* in distinction from *B flat*: now used as the natural. See *accidental*, *n.* 1.—*B rotundum*, in *music*, literally round *B*, a modified form (*♮*) of the Roman letter *b* first used to denote *B flat*, as distinguished from *B quadratum*: it is now the conventional sign of the flat. See *accidental*, *n.* 1.—*Not to know B from a bull's foot*, or a broomstick, or a battledore, to be very illiterate or very ignorant: popular alliterative comparisons, the first dating from the Middle English period.

Baal (*bā'al*), *n.* [LL. *Baal*, Gr. *Βαάλ*, *Baál*, < Heb. *Ba'al*, orig. 'lord,' or 'owner,' applied to any deity, then to a particular deity; pl. *bā'alim*.] The name of a Semite solar deity worshiped, especially by the Phœnicians and their descendants the Carthaginians, with much license and sensuality. *Baal* was derived from the Babylonian *Bel*, a deity of a much higher type, and was merged in the Tyrian *Melkarth*. In its original generic sense of 'lord,' the name was applied to many different divinities, or, with qualifying epithets, to the same divinity regarded in different aspects and as exercising different functions. Thus in *Hos. ii. 16* it is applied to *Jehovah* himself, while *Baal-berith* (the covenant-lord) was the god of the *Shechenites*, and *Baal-zebub* (the fly-god) the idol of the *Philistines* at *Ekrón*. *Baal-peor* (lord of the opening) was a god of *Moab* and *Midian*, probably the same as *Chemosh*. The word enters into the composition of many Hebrew, Phœnician, and Carthaginian names of persons and places, as *Jerubbaal*, *Hasdrubal* (help of *Baal*), *Hannibal* (grace of *Baal*), *Baal-Hannun*, *Baal-Thamar*, etc.

Babouvism (ba-bö'vizm), *n.* [*< F. babouvisme, < Babeuf* (Babuf) + *-ism*.] The communistic system promulgated by the French socialist François Noël Babeuf during the revolution. Its fundamental principles were summed up in the sentence: "The aim of society is the happiness of all, and happiness consists in equality." By "equality" was meant absolute uniformity in dress, food, elementary education, etc. The property of corporations was to be seized at once, and that of individuals at their death. Officers chosen by the people were to have unlimited powers to divide the product of the industry of all, according to the needs and requirements of each. A great conspiracy was organized by Babeuf and his followers for the establishment of a new government based on these principles, but it was betrayed to the Directory in May, 1796, and Babeuf was executed in May, 1797. (b) Searlet.—**Babylonian art**, a subdivision of Mesopotamian art; the later development of Chaldean art as practised at Babylon, both prior to the Assyrian domination, which began in the eleventh century B. C. and culminated in the ninth century, and after the restoration of the Babylonian kingdom, under Nabopolassar, about 600 B. C. The architecture of Babylon, like that of Assyria, of which it was the model, employed as its chief material of construction the sun-dried brick, and held in general to the thick walls and massive forms which were imposed by this friable material. Stone was much more scarce in Babylonia than in Assyria; hence Babylonian decoration adhered in the main to painting on a surface of plaster for interiors, and to brilliantly enameled tiles, often forming pictorial subjects of great size and variety, for exteriors. In Babylonia, contrary to Assyrian practice, the temple, rising pyramidally in stages, each ascended by broad flights of steps, and each of a distinct color, was the most important development of architecture, the royal palace being subordinated to it. The scarcity of stone rendered sculpture scanty; but the gem-cut-

ter's art produced cylinders or seals in great plenty and of much merit, and pottery, metal-work, and textile fabrics attained great perfection. See *Mesopotamian art*, and compare *Chaldean art* and *Assyrian art*, under the adjectives. —**Babylonian quartz**. baccara, baccarat (bak-a-rä'), *n.* [F.; origin unknown.] A French game of cards played by any number of betters and a banker, and with one or more packs of cards, according to the number of players. Each better deposits a stake, and all stakes are duplicated by the banker, after which the latter deals two cards to each player, including himself. The aim is to decide each individual bet by comparison of the total count held by each better with that held by the banker. The court-cards each count 10, and the others according to the spots. The counts range in value by series of 9, 19, 29, 8, 18, 28, etc., 9 beating any other count. A player may call for more cards, but at the risk of exceeding 29 in count, which excess forfeits his bet. If a player's cards count 9 he declares it, when all who hold hands superior to that of the banker may

claim the amount of their bets, and the banker takes the stakes of the others. In America the game is slightly different, court-cards and tens not counting.

It was the current name of this god among the Romans. The orgiastic worship of Bacchus was especially characteristic of Bœotia, where his festivals were celebrated on the slopes of Mount Cithæron, and extended to those of the neighboring Parnassus. In Attica the rural and somewhat savage cult of Bacchus underwent a metamorphosis, and reached its highest expression in the choric literary contests in which originated both tragedy and comedy, and for which were written most of the masterpieces of Greek literature. Bacchus was held to have taught the cultivation of the grape and the preparation of wine. In early art, and less commonly after the age of Phidias, Bacchus is represented as a bearded man of full age, usually completely draped. After the time of Praxiteles he appears almost universally, except in archaic examples, in the type of a beardless youth, of graceful and rounded form, often entirely undraped or very lightly draped. 2. In universities and colleges: (a) Before the fifteenth century, a young man in apprenticeship for the degree of master in one of the higher faculties, that is, of theology, law, or medicine. (b) In modern use, a person who has taken the first degree (baccalaureate) in the liberal arts and sciences, or in divinity, law, medicine, etc., at a college or university; as, a *bachelor* of arts; a *bachelor* of science. See *baccalaureate*. Originally, a bachelor had not necessarily taken any degree whatever; but after the fourteenth century the word, without ceasing to carry this significance, was also applied to a determinate, or young man who had taken the lowest degree in the faculty of arts. This degree seems to have been conferred not by the chancellor nor by the faculty, but only by the "nation." It was not accompanied by any regular diploma, but testimonial letters were furnished if desired. In order to be admitted to the degree, it was requisite for the candidate to be fourteen years of age, to have followed a three years' course in logic in the university, and also to sustain a disputation, called the determination. There were in the middle ages three orders of bachelors of theology. The lower order consisted of the *ordinary bibles* and *curators*, the duty of the former being to read and expound the Bible from beginning to end, and that of the latter to give one course of lectures upon a book of the Old and another upon a book of the New Testament, which books they chose at pleasure. Bachelors of the second order of theology were called *sententiary bachelors*, because they publicly read and expounded the Book of the Sentences of Peter the Lombard. It was not, however, till late in the thirteenth century that any bachelor was permitted to lecture on the Sentences. According to the law, the lectures of the sententiary bachelors had to include the reading of the text of the author, and the explanation of it phrase by phrase; and they were forbidden to trench upon questions of logic and metaphysics. They also made certain acts called *principia*. See *principium*. As soon as the sententiary had completely finished the exposition of the Sentences, he became a *formed bachelor* (*baccalaris formatus*), and had still to continue his theological studies for three years longer before he could be licensed to preach and to teach as a master.

[NL., *< Gr. βακτήριον, a little stick, dim. of βακτηρία, a staff, stick, < βακτρον, a staff, stick, akin to L. baculum, a staff: see baculus.*] **1.** One of the micro-organisms which are concerned in the putrefactive processes, and are known as *Schizomycetes*, or fission fungi, in distinction from *Saccharomycetes*, or budding fungi, which produce alcoholic fermentation. Their true character was long in doubt, but they are now generally regarded as the lowest forms of vegetable life, and are known to multiply, in some species at least, by the formation of spores and even of true sporangia. They consist of exceedingly minute spherical, oblong, or cylindrical cells, without chlorophyll, multiply by transverse division, and may be found anywhere. Their origin and the part they take in putrefaction, fermentation, and disease have been the subject in recent years of much study and discussion. Very much remains in doubt, but there is no question of the importance of these investigations from a sanitary point of view. It also appears to have been demonstrated that the bacteria which exist in the soil are active in changing otherwise inert substances into matter suitable for the food of plants, converting the nitrogenous matter of organic origin into soluble nitrates. The genera and species have been variously defined, and are necessarily based on slight characters. The groups and principal genera usually recognized are *Micrococcus*, with spherical cells, concerned in certain fermentations and found in connection with special contagious diseases; the rod-bacteria, *Bacterium*; the straight filiform bacteria, *Bacillus*, etc.; and the spiral filiform bacteria, *Vibrio*, *Spirillum*, etc. Of the genus *Micrococcus*, *M. diphtheriticus* is considered to be the special cause of diphtheria, and *M. vaciniae* of smallpox. See *Bacteriaceae*, and cut under *bacillus*.

The individuals of this species are about one ten-thousandth of an inch in length.

This word appears to exist also in some AS. local names, but traces elsewhere are slight; cf. AS. *bede, "pede, immatura," negative *or-bede, "or-pede, adultus," in glosses. This etymology, first suggested by Leo, is uncertain, but it is the only one that fairly satisfies the phonetic and historical conditions; the word can have no connection, as suggested, with Goth. *bauths*, deaf and dumb, with G. *böse*, bad, or with Corn. *bad*, Ir. Gael. *baodh*, foolish, etc. The orig. word, AS. *beddel*, ME. **baddel*, on account of its sinister import, is scarcely found in literature, but, like other words of similar sense, it prob. flourished in vulgar speech as an indefinite term of abuse, and at length, divested of its original meaning, emerged in literary use as a mere adj., *badde*, equiv. to the older *evil*. (Cf. the similar development of the adj. *wicked*, ME. *wicked*, *wikked*, earlier *wicke*, *wikke*, from the noun AS. *wicca*, m., a witch, wizard, hence an evil person: see *wicked*.) The adj. first appears at the end of the 13th century, and does not become common till the 15th century. In high literary use it is comparatively rare, as against *evil*, till the 18th century. In the English Bible *bad* occurs but rarely, and only in the familiar antithesis with *good*. *Bad* was formerly compared reg. *badder*, *baddest*, but has now taken from *evil* the irreg. comparison *worse*, *worst*.] **I. a.**; compar. *worse*, superl. *worst* (formerly *budder*, *baddest*). **1.** Evil; ill; vicious; wicked; depraved: applied to persons, conduct, character, influence, etc.: as, a *bad* man; *bad* conduct; a *bad* life; a *bad* heart; *bad* influence, etc.*

A token or cognizance worn in allusion to the wearer's occupation, position, preferences, or achievements. The badge in the middle ages was not necessarily heraldic, though in many cases it was selected from one or more of the heraldic bearings, and it is not bound by heralds' rules. Thus, the white hart of Richard II. is represented in different attitudes, and is not described in the language of blazon. A figure for a badge might also be chosen arbitrarily, as the boar of Richard III. Badges selected as personal tokens have often become heraldic bearings, as the three feathers of the Prince of Wales.

A fossorial plantigrade carnivorous mammal, of the family *Mustelidae* and subfamily *Meleinae*. (For its technical characters, see *Meleinae*.) The common European species, to which the name was first applied, is *Meles vulgaris* or *Meles taxus*; it is about 2 feet long, of heavy and clumsy shape, low on the legs, with a short thick tail, a long snout, and long claws fitted for digging. The general color is grizzled gray, with dark limbs, and black and white stripes on the head. This animal inhabits temperate and northerly portions of Europe and Asia. Its flesh is used as food, its pelt in furriery, and its hair for making shaving-brushes and the kind of artists' brushes called *badgers*. In a state of nature the animal is less fetid than some of the other species. The American badger, *Taxidea americana*, resembles the foregoing, but differs in the dental formula and some other technical characters; it is a common animal in the western States and Territories, and in some regions, as the Missouri watershed, it is very abundant. The Indian badger is *Arctonyx collaris*; it is also called *sand-bear* and *bear-pig*. The Javanese skunk (so called from its extreme fetidness), the teledu or teledu, *Mytilus meliiceps*, is a true badger. See *cut* under *teledu*. The ratel, honey-badger, or Cape badger, *Mellivora capensis*, is nearly related, though belonging to a different subfamily, the *Mellivorinae*. The wombat is often called badger in Australia. It is a widespread vulgar error that the legs of the badger are shorter on one side than on the other; hence, "the uneven-legg'd badger," Drayton.

(b) To set free, deliver, or liberate from arrest and imprisonment, upon security given that the person bailed shall appear and answer in court or satisfy the judgment given: applied to the action of the magistrate or the surety. The magistrate is said to *bail* a person (or to *admit him to bail*) when he liberates him from arrest or imprisonment, upon bond given with sureties. The surety is also said to *bail* the person whose release he procures by giving the bond.

Tit. Let me be their bail. . . .

bail² (bāl), *n.* [Early mod. E. also *bayle*, *bale*, < ME. *bayle*, *bail* (ML. *ballium*, *balium*), < OF. *bail*, power, control, custody, charge, jurisdiction, also delivery, < *bailleur*, *bailier*, conduct, control, etc., deliver. The noun is thus historically from the verb, though in E. the verb in some of its senses depends on the noun: see *bail*², *v.*] 1. Power; custody; jurisdiction.

Use silly Faunus, now within their *baille*.
Spenser, *F. Q.*, VII. vi. 49.

2. The keeping of a person in nominal custody on security that he shall appear in court at a specified time. The person is said to be *admitted to bail*, in which phrase, however, *bail* is now commonly thought of as the security given. See 3.

3. Security given to obtain the release of a prisoner from custody, pending final decision in the action against him. In civil cases a person arrested has always the right to give sufficient bail, and thereupon is released from custody. In criminal cases the defendant has also this right, as a rule, when the crime charged is a mere misdemeanor. Whether to bail one charged with treason or felony is usually in the discretion of the judge, and in some states bail is always denied to one held for a crime punishable with death. The security is in the form of a bond executed by responsible sureties, providing that the defendant shall appear at the order of the court under penalty of forfeiture of the sum named in the bond. The person bailed is regarded as but transferred from the custody of the law to that of his sureties, who may therefore seize and surrender him at any time. In civil cases there are several kinds of bail at common law, the chief being *common bail* and *special bail*.

Common bail, or *bail below*, which is now disused, was given to the sheriff on a bail-bond entered into by two persons, on condition that the defendant appear at the day and in such place as the arresting process commands. *Special bail*, *bail above*, or *bail to the action*, is given by persons who undertake generally, after appearance of a defendant, that if he be condemned in the action he shall satisfy the debt, costs, and damages, or render himself to the proper person, or that they will do so for him. (*Warton*.) In Scotland, bail in civil cases is called *caution* (which see).

4. Figuratively, security; guaranty.

Milton, *Tetrachordon*, Works (1738), I. 251.

5. Liberation on bail: as, to grant *bail*.—6. The person or persons who provide bail, and thus obtain the temporary release of a prisoner. Persons who make a business of furnishing bail on payment of a fee often frequent law-courts. Formerly such persons wore straws in their shoes as a sign of their occupation; hence the term *straw bail*, used to designate fictitious or irresponsible professional bail.

The *bail* must be real substantial bondsmen.
Blackstone.

The attorney whispered to Mr. Pickwick that he was only a *bail*. "A *bail*?" "Yes, my dear sir, half-a-dozen of 'em here. Bail you to any amount and only charge half-a-crown." *Dickens*, *Pickwick Papers*.

Where those mysterious personages who were wont in the old times to perambulate the great saloon of the futile footsteps Westminster Hall, with straws in their shoes, and whose occupation is not by any means gone now-a-days, are always in attendance in a philanthropic eagerness to render service to suffering humanity—or in other words, to become *bail* where *bail* is wanted, for a gratuity of half-a-crown to twelve and sixpence. *G. A. Sala*.

[*Bail*, being an abstract noun applicable to persons only by ellipsis, is not used in the plural.]—*Bail à longues années*, in *Canadian law*, a lease for more than nine years, termed also an *emphyteutic lease*, whereby the lessee enjoys for the term all the rights attached to the quality of proprietor, and can dispose of the property subject to the rights of the lessor.—On *bail*, on guaranties duty given for the appearance or production of a prisoner in court at the proper time: as, he was liberated on *bail*.

E. also *balence*, *balauce*, etc., < OF. *balance*, F. *balance* = Pr. *balansa* = Sp. *balanza*, *balance* = Pg. *balança* = It. *bilancia*, < LL. **bilancia*, a balance, < *bilanx* (acc. *bilancem*), adj., in *libra bilanx*, a balance having two scales, < L. *bi-*, *bis*, twice, + *lanx*, a dish, scale of a balance. See *bi-2*, *lance*², *launc*², and *auunc*.] 1. An instrument for determining the weight of bodies as compared with an assumed unit-mass. In its simplest and most scientific form it consists of a horizontal lever, having its fulcrum (which is a knife-edge) just above the center of gravity of the whole balance, and carrying two pans suspended as delicately as possible (preferably from knife-edges) at equal distances on the right and left of the fulcrum. It also carries a tongue-pointer or index (a slender rod) rigidly attached to the middle of the beam or lever, and extending vertically up or down. Except in coarse balances, there is a divided scale, over which the end of the tongue moves in the oscillations of the balance. All delicate balances are protected from currents of air by glass cases, and they have contrivances for steadying the pans, and often for removing the knives from their bearings and for replacing them. Exceedingly delicate balances are sometimes inclosed in vacuum-chambers, and have machinery for changing the weights. In using the balance, the substance to be weighed is placed in one pan or scale and the weights are put in the other, and different combinations of weights are tried until the pointer oscillates at equal distances to one side and the other of the position it has when the scales are empty. In chemical balances the last adjustment is obtained by moving a minute weight, or rider, to different points on the decimal graduated beam. The figure shows the beam of a balance of precision. It is so formed as to combine stiffness with lightness, and there are various adjustments for moving the center of gravity, the knife-edges, etc. Other things being equal, the greater the length of

Beam and neighboring parts of a Balance of Precision. *A, A*, beam; *B*, knife-edge on which it turns; *C, C*, knife-edges fixed to the beam on which the pans are hung; *D, D*, the bearing-pieces of the pans; *E*, tongue, the lower extremity of which moves over a scale; *F*, screw with a nut for raising and lowering the center of gravity: this has no connection with the horizontal rod *I, I*; *G*, screw with a nut for carrying the center of gravity toward one or the other pan; *H*, a rider, or little weight, whose value depends on its position on the beam, which it straddles; *I, I*, rod sliding horizontally, with a hook to take up and set down the rider; *K, K*, piece which raises and lowers the levers, *L, L*; *L, L*, levers to take the beam and pans simultaneously off their bearings when the weights are to be changed; *M, M*, knobs supporting the beam when the levers, *L, L*, are raised; *N, N*, *Y*'s supporting the pans when the levers, *L, L*, are raised. Many balances have arrangements for adjusting the relative positions of the three knives, but these are discarded in the larger balances.

the arms and the smaller the distance of the center of gravity below the center of suspension, the greater will be the sensibility of the balance or the angular amount of the deviation produced with a given slight addition to either scale. The degree of sensibility to be desired depends upon the use to which the instrument is to be put. Such a balance as is employed in accurate chemical analysis will indicate a difference of weight of a tenth or hundredth of a milligram.

An equivalent or equalizing weight; that which is put into one scale to offset the weight in the other; the weight necessary to make up the difference between two unequal weights; a counterpoise, literally or figuratively. Specifically—6. In *mining*, a counterpoise or counterweight used in such a way as to assist the engine in lifting the load.—7. The part of a clock or watch which regulates the beats: formerly, a pin oscillating on its center, and thus resembling the beam of a balance; now, a wheel. See *balance-wheel*.—8. The arithmetical difference between the two sides of an account: as, to strike a *balance*.—9. The sum or amount necessary to balance the two sides of an account, usually spoken of as a *debit* or a *credit balance*: as, I have still a *balance* at my banker's; a *balance* still due.—10. A surplus; a remainder; the rest; the residue; what remains or is left over: as, he bequeathed the *balance* of his estate to A. B.; the *balance* of a meal. See *automaton*.—*Balance of power*, in *international law*, a distribution and an opposition of forces among nations forming part of one system, such that no state shall be in a position, either alone or united with others, to impose its own will on any other state or interfere with its independence. (*Ortolan*.) The leading rule by which it has been sought to effect this in Europe has been to oppose every new arrangement which threatens either materially to augment the strength of one of the greater powers or to diminish that of another.

The meaning of the *balance of power* is this: that any European state may be restrained from pursuing plans of acquisition, or making preparations looking towards future acquisitions, which are judged to be hazardous to the independence and national existence of its neighbors.

Woolsey, Intro. to Inter. Law, § 43.

Balance of probabilities, the excess of reasons for believing one of two alternatives over the reasons for believing the other. It is measured by the logarithm of the ratio of the chances in favor of a proposition to the chances against it.—*Balance of trade*, the difference between the amount or value of the commodities exported from and imported into a country. The balance is said to be *favorable for* or *in favor of* a country when the value of its exports exceeds that of its imports, and *unfavorable* when the value of its imports exceeds that of its exports.—*Bent-lever balance*. See *tangent-balance*.—*Compensation balance*. See *compensation*.—*Danish balance*, a weighing apparatus some-what resembling the steelyard, but differing from it in having the fulcrum movable, the weight being at one end and the load at the other; the loop by which it is suspended is shifted along the beam until equilibrium is established. The weight of the substance in the scale-pan is indicated by the point at which the fulcrum is placed when the instrument is in equilibrium.—*Electric balance*. See *absolute electrometer*, *under electrometer*; *differential galvanometer*, *under galvanometer*; *induction-balance*; *Wheatstone's bridge*, *under resistance*.—*Expansive balance*, a compensation-balance in watches, consisting of a compound rim whose outer and inner portions are made of metals having different rates of expansion by heat. See *hydraulic*.—*Hydrostatic balance*. See *hydrostatic*.—*Hygrometric balance*. See *hygrometric*.—*Roberval's balance*, a balance having two horizontal beams one over the other, connected at their extremities by joints to vertical pieces, so that the whole forms a linked parallelogram. The scales are at the top. The advantage of the contrivance is, that it makes it a matter of indifference at what point on the pan the object to be weighed, or the counterpoise, is placed. An improved form of this balance is commonly used to weigh articles sold by druggists.—*Roman balance*, a steelyard (which see).—*Spring-balance*, a contrivance for determining the weight of any article by observing the amount of deflection or compression which it produces upon a helical steel spring properly adjusted and fitted with an index working against a graduated scale. Another form of spring-balance is made in the shape of the letter C, the upper end being suspended by a ring, and the lower end affording attachment for the hook whereby the object is suspended. As the bow opens a finger traverses a graduated arc and registers the weight.—*Thermic or actinic balance*. It consists of a magnetic needle suspended by a silk thread or a very fine wire in a glass cylinder, of which the circumference is graduated. The force or magnet to be measured is applied to one side of the cylinder, either inside or outside, and its intensity is indicated by the amount of deflection of the suspended needle, which is caused to exert a force of torsion on the thread or wire which supports it. (See also *alloy-balance*, *assay-balance*, *coin-balance*, *micrometer-balance*, *millstone-balance*.) = *Syn. 10. See remainder.*

balance-bar (bal'ans-bär), *n.* Same as *balance-beam*, 2.

balance-barometer (bal'ans-bä-rom'e-tër), *n.* A barometer consisting of a beam balanced on a pivot, and formed, on opposite sides of the pivot, of materials differing greatly in specific gravity. The bulks of the parts on either side of the fulcrum, and consequently the volumes of air displaced by them, thus differ greatly. If the air increases in density, its effective buoyancy on the more bulky arm considerably exceeds its effect upon the smaller; the former therefore rises. If the air becomes lighter, the reverse happens. The vibrations are noted upon a scale.

It is designed to relieve the strain on the engine and rod resulting from lifting a heavy load. Also called *oscillating* or *rocking bob*. See *bob*.

The apparatus is attached between two pulleys, of which one receives and the other transmits the motive force, and is operated by means of loose pulleys, upon which the belts are shifted when it is desired to test the power. Also called *bevel-gear transmitting dynamometer*. See *cut under dynamometer*.

Darwin, Different Forms of Flowers, p. 262.

balance-pit (bal'ans-pit), *n.* In *mining*, the shaft or excavation in which the balance or counterpoise moves.

balance-plow (bal'ans-plou), *n.* A plow in which two sets of plow-bodies and colters are attached to an iron frame moving on a fulcrum, one set at either extremity, and pointing in different directions. The balance-plow is intended

to be used without turning, and is so arranged as to cast all the furrows in the same direction, the one part of the frame being raised out of the ground when moving in one direction, and the other when moving in the opposite. It is the front part of the frame, or that furthest from where the driver sits, which is elevated, the plowing apparatus connected with the after part being always inserted in the ground and doing the work. Balance-plows are used in steam-plowing. Generally two, three, or four sets of plow-bodies and colters are attached to either extremity, so that two, three, or four furrows are made at once. signed to permit the operation of a valve by a slight force. The *balance-puppet-valve* has two disks upon a single stem, the fluid being admitted either between the two disks or above the upper and below the lower. One disk is made larger than the other, that there may be a slight excess of pressure tending to close the valve, or to keep it pressed to its seat.

balance-wheel (bal'ans-hwél), *n.* 1. A wheel in a watch or chronometer which by the regularity of its motion determines the beat or strike.—2. Figuratively, whatever serves for the regulation or coördination of movements.

extraordinary genus of invertebrate animals, the type not only of a family, *Balanoglossida*, but also of an order or even a distinct class of animals, *Enteropneusta* (which see). It is related in its mode of development to the echinoderms, in some respects to the ascidians, and is usually classed with the

Balanoglossus.

I. The *Tornaria* larva, about 1/12 of an inch long, enlarged, side view. a, anus; b, vessels leading to the dorsal pore; d, from sac of the water-vascular system; w; w, prolongation of the sac; h, heart; i, intestine; s, stomach; o, esophagus; m, mouth; u, u, lobes of alimentary canal; mb, muscular band from eye-speck; c, to water-vascular sac; II. Young *Balanoglossus*. Letters as before, except g, the first-formed branchial stigmata. III. *Balanoglossus*, more advanced. c, collar; p, proboscis.

Vermes. The members of this genus are elongated, footless, soft-bodied worms, with the mouth at one end of the body and the anus at the other. The fore part of the body presents a kind of collar surrounding a constriction from which springs a long hollow proboscis-like organ, whence the name *Balanoglossus*, this organ being like a tongue somewhat acorn-shaped, proceeding from within the collar like an acorn from its cup. On the portion of the body from which the proboscis springs there is a flattened area with a longitudinal series of branchial apertures, communicating with branchial sacs connected with the alimentary canal; hence the term *Enteropneusta*. In consequence of this relation of the respiratory to the alimentary canal, Huxley associates *Balanoglossus* with *Tunicata* (or ascidians) as members of a pharyngopneustic series. The larval form of *Balanoglossus* was formerly called *Tornaria*, and regarded as an echinoderm from its great resemblance to the larva of a starfish.

2. [*l. c.*] A member of the genus *Balanoglossus*. **balanoid** (bal'a-noid), *a.* and *n.* [*Gr.* *βάλανος*, an acorn, + *-oidos*, form.] I. *a.* Resembling an acorn: specifically applied to the acorn-shells of the family *Balanidæ*. See cut under *Balanus*.

Balanophoracæ (bal'a-nō-fō-râ-sê-ê), *n. pl.* [*NL.*, < *Gr. βάλανος*, an acorn, + *-φόρος*, bearing (< *Gr. φέρω* = *E. bear*), + *-accæ*.] An order of eurious apetalous leafless plants, related to the mistletoe, but parasitic upon the roots instead of the branches of other plants. From their simple structure, they were formerly thought to be allied to the fungi. There are about 40 known species, grouped into 14 genera, natives of the tropics. They are generally of a

Balanus (bal'a-nus), *n.* [*L.*, < *Gr. βάλανος*, an acorn. Cf. *L. glans*, an acorn: see *glans*.] The typical genus of sessile cirripeds of the family *Balanida*; the acorn-shells or sea-acorns, called *barnacles*, except in Great Britain, where the pedunculated *Lepadidæ* have that name. *B. tintinnabulum* is the representative species. The shell consists of 6 plates, with an operculum of 4 valves. Colonies are to be found on rocks left dry at low water, on ships, on timber, on lobsters and other crustaceans, and on the shells of conchifers and other mollusks. They differ from the members of the genus *Lepas* in having a symmetrical shell and in being destitute of a flexible stalk. They pass through a larval stage of exist-

The Dan. *baglast*, 'back-load,' D. obs. *balglast*, 'belly-load,' appear to be due to popular etymology. The explanation of *ballast* as < MLG. *bal*, = AS. *balu*, bad, evil (see *bal¹*), + *last*, load, that is, unprofitable cargo, is not satisfactory.] 1. Weight carried by a ship or boat for the purpose of insuring the proper stability, both to avoid risk of capsizing and to secure the greatest effectiveness of the propelling power. A usual modern form of ballast is water, which is pumped in or out of compartments arranged to receive it; lead is also much used, especially for craft of moderate size, and is often run into a space left for it between the plates of the keel, or cast into plates of appropriate form and bolted to the exterior of the keel. Gravel, stones, pig-iron, and other weighty materials are in common use as ballast, in cases where the requisite weight cannot be found in the regular cargo itself.

An ancient military engine used for throwing missiles. The different references to it are contradictory, as it is described as acting by means of a bow, but also as throwing large stones rather than darts. An attempt has been made to reconcile these statements by representing the engine as composed of a strong shaft, rotating on one of its ends, and having at the other end a receptacle for the missile; this shaft would be thrown forward by the recoil of a steel bow, and stopped suddenly against a transom, thus releasing the missile. Throughout the middle ages the term is used in Latin writings for military engines of different kinds. See *trébuchet*, *manivel*, *caable*, *petronel*, *pierrivire*, and *catapult*. When used as a bearing in heraldry, the ballista is represented so simplified as to be hardly recognizable. See *galvanometer*.—**Ballistic pendulum**, an apparatus invented by Benjamin Robins for ascertaining the velocity of military projectiles, and consequently the explosive force of gunpowder. A piece of ordnance is fired against a cast-iron case filled with bags of sand, which forms the ball of a pendulum, and the percussion causes the pendulum to vibrate. The distance through which it vibrates is measured on a copper arc by an index carrying a vernier, and the amount of vibration forms a measure of the force or velocity of the ball. The ballistic pendulum is now nearly superseded by various forms of apparatus for measuring the time occupied by the passage of the shot from one screen or wire to another. See *electroballistic*.

It is made of silk or other light material, varnished with caoutchouc dissolved in turpentine. A network of twine envelops the balloon, and is tied to a circular hoop a little below it, from which a car, usually consisting of a large wicker basket, is suspended. A valve in the bottom of the balloon can be opened and closed at pleasure by means of a string, and the basket is furnished with sand-bags as ballast. If the aeronaut wishes to ascend, he throws out some of the ballast; if to descend, he opens the valve. Balloons have been successfully used for military purposes (see *captive balloon*, below), and, in the case of besieged cities, as a medium of communication with the outside world.

A ticket or slip of paper, sometimes called a *voting-paper*, used for the same purpose, on which is printed or written an expression of the elector's choice as between candidates or propositions to be voted for.—3. A method of secret voting by means of small balls, or of printed or written ballots, which are deposited in an urn or a box called a ballot-box. In the former case, each person who is entitled to vote, having the choice of two balls, one white and one black, places a white ball in the box if he is in favor of the resolution proposed, as the admission of a person to membership in a club, or a black ball if he is opposed to it. Hence, to *blackball* a person is to vote against his election. In the latter case, the ballots or voting-papers are so folded as to prevent the voter's preference from being disclosed, and are usually handed to an authorized officer called an inspector of elections, to be deposited in the box in the voter's presence. The ballot is now employed in all popular elections in the United States (except in the State elections of Kentucky, in which the voting is *viva voce*), throughout the United Kingdom and the British colonies, and in the national or parliamentary elections in Germany, France, Belgium, Italy, and most other countries of continental Europe.

balsam (bāl'sam), *n.* [Early mod. An oily, aromatic, resinous substance, exuding spontaneously from trees of the genus *Balsamodendron*; hence, by extension, any aromatic or odoriferous exudation

from trees or shrubs, whether spontaneous or after incision; balm. A great variety of substances pass under this name; but in chemistry the term is confined to vegetable juices, whether they remain liquid or spontaneously become solid, which consist of resins mixed with gums or volatile oils, the resins being produced from the oils by oxidation. A balsam is thus intermediate between a volatile oil and a resin. It is soluble in alcohol and ether, and capable of yielding benzoic acid. The balsams are either liquid or solid: of the former are the balm of Gilead and the balsams of copaliba, Peru, and Tolu (see below); of the latter, benzoin, dragon's blood, and storax. The balsam used in the Roman Catholic Church in the confectio of chrism is, by the rubrics, that of Syria or Mecca; but, from difficulty in obtaining this, concessions have been made by the popes for the use of the balsams of Brazil, Tolu, Peru, etc.

Many of the resins occur in plants dissolved in ethereal oils. Should the vessels which contain this solution be injured, it flows out, and becomes thick, or even solid, on exposure to the air, partly from evaporation of the solvent oil, and partly by its oxidation. Such mixtures of oils and resins are termed *balsams*.
